You Picked Your Boat With Great Care…

You should do the same with your marina.

Remember when you bought your boat? You checked out every little detail, you compared prices and you didn’t settle for the first offer. Were you careful in picking a marina? Let’s face it, no matter how active a sailor you are your boat spends most of its time docked. That is why it’s very important to choose a marina that measures up to your own and your boat’s needs.

- Prime deep water double-fingered concrete slips from 30’ to 100’
- Great Estuary location in the heart of beautiful Alameda Island
- Complete bathroom and shower facility, heated and tiled
- FREE pump out station open 24/7
- Full Service Marine Center and haul out facility
- Free parking
- Free WiFi on site!
And much more…

A BIRD’S EYE VIEW – FROM THE FRONT

Jock McLean works in a boat yard and can probably fix anything. But he’d rather fix an old wood boat than anything else. The 1929 Bird Boat Oriole is owned by Jock and partner Hugh Harris, and is the latest of Jock’s re-fits.

Last weekend’s “Woodie” regatta had the old, traditional wood boats out at it again, racing off the Cityfront. Jock had Oriole flying around the course with her shiny new suit of Pineapple Sails.

Bird Boat sails aren’t simple. The main is huge; the boom sticks out way past the transom. The little jib has an aluminum headboard, like most mainsails. But Pineapple Sails is up to the task, sensitive to the requirements of the Bird Boat’s class specifications and wooden spars.

Every boat is special: Its measurements, where it sails, the owners’ goals and sailing interests. The boat’s sails need to match those goals and specifics.

Going cruising? We’ll send you off with the sails that can take you anywhere. And back home again! Want racing sails that go for more than one or two seasons? We make those, too.

Give us a call. Every sail we build is made right here in sunny Alameda, California.

YOUR DEALER FOR: Musto foul weather gear, Dubarry footwear, and Spinlock Deckwear

Sails in need of repair may be dropped off at West Marine in Oakland or Alameda.

</thead>
<tbody>
<tr>
<td>28’ BRISTOL CHANNEL CUTTER, ‘77</td>
<td>1977</td>
<td>$99,000</td>
<td>Lyle Hess design and Samuel L. Morse build among the most admired boats in the world. Named as one of the 10 best!</td>
</tr>
<tr>
<td>46’ KELLY/PETERSON CC, ‘85</td>
<td>1985</td>
<td>$165,000</td>
<td>The simplicity of her lines evolved from centuries of ocean voyaging, and, below the waterline, she shows her heritage.</td>
</tr>
<tr>
<td>34’ FRERS, ’76</td>
<td>1976</td>
<td>$85,500</td>
<td>She was launched in 1999 complete with new Yanmar engine and has been only lightly sailed in Southern California since.</td>
</tr>
<tr>
<td>28’ C&amp;C Mk III, ’86</td>
<td>1986</td>
<td>$72,500</td>
<td>Over $40,000 in upgrades and improvements. Change in personal circumstances forces the sale of this magnificent vessel.</td>
</tr>
<tr>
<td>30’ CUSTOM CATAMARAN, ‘08</td>
<td>2008</td>
<td>$89,900</td>
<td>The outboard engine is completely concealed in engine compartment under cockpit sole. She was Awlgrip painted in 2013.</td>
</tr>
<tr>
<td>42’ CATALINA Mk II, ’04</td>
<td>2004</td>
<td>$225,000</td>
<td>Barely used and ready to go. A one-owner yacht professionally maintained since new with fewer than 200 engine hours!</td>
</tr>
<tr>
<td>36’ CATALINA Mk II, ’01</td>
<td>2001</td>
<td>$99,500</td>
<td>Pride of ownership in appearance and maintenance. She’s competitively priced for such a well-maintained Catalina 36.</td>
</tr>
<tr>
<td>48’ MARINER MAYFLOWER CC, ’81</td>
<td>1981</td>
<td>$139,500</td>
<td>Many upgrades will allow you to cruise in comfort and security. If you intend to cruise the blue waters, here’s your boat!</td>
</tr>
<tr>
<td>30’ HUNTER 340, ’98</td>
<td>1998</td>
<td>$68,500</td>
<td>She is spacious below decks and in the cockpit as well — and she is well rigged for singlehanded sailing. Enjoy the ride!</td>
</tr>
<tr>
<td>46’ CHINOOK, ’96</td>
<td>1996</td>
<td>$15,000</td>
<td>Classic lines and excellent sailing characteristics. A few projects yet to complete, but seems to be a solid vessel.</td>
</tr>
<tr>
<td>34’ HUNTER 340, ’98</td>
<td>1998</td>
<td>$68,500</td>
<td>She is spacious below decks and in the cockpit as well – and she is well rigged for singlehanded sailing. Enjoy the ride!</td>
</tr>
<tr>
<td>30’ C&amp;C Mk II, ’84</td>
<td>1984</td>
<td>$26,900</td>
<td>Big and roomy and a born performer. Definite recommendaton for those getting into cruising or moving up from a daysailer.</td>
</tr>
<tr>
<td>48’ MARINER MAYFLOWER CC, ’81</td>
<td>1981</td>
<td>$139,500</td>
<td>Many upgrades will allow you to cruise in comfort and security. If you intend to cruise the blue waters, here’s your boat!</td>

Our patented woven Vectran® sailcloth performs like the laminates with the durability of Dacron®, especially in roller furling applications. In fact, Vectran® is lighter, lower stretch, and retains its shape over a longer life than any sailcloth we’ve ever offered to cruising sailors. That’s because Hood Vectran® is woven, not laminated to Mylar® film. And you can be sure that each sail we roll out is built by hand, with the same care and craftsmanship that has been the Hood hallmark for 50 years. To discuss your sailcloth needs – whether our state-of-the-art Vectran® or our soft, tight-weave Dacron® – give us a call today.

May 11 — Intro to Ship Modeling at Maritime Library at Ft. Mason, 6 p.m. $5. Info, info@sfsailing.org.

Standup and Smile!

Jimmy Styks Scout SE SUP

Ever wonder why practically every body of water seems to have at least a few standup paddlers cruising across it these days? One reason is that it's so easy to do. Another is that it's extremely affordable. It's also great exercise, non-polluting and highly portable. But the best reason of all is that it's just plain fun! The Scout SE is a great looking, lightweight and durable epoxy/glass board with a genuine bamboo inlay deck that's suitable for entry-level to advanced paddlers. It comes as a complete package including a paddle, leash, fin and bag for just $999.99. At selected stores and online at westmarine.com. Order online and we'll ship it free to one of our stores!

June 22-23 — Celebrate with sailors around the Northern Hemisphere during Summer Sailstice. Sign up for prizes and...
Newport Bermuda Race Winner Shockwave, with new “Reaching Code 0”

The new generation Doyle Code 0 replaces the standard Code 0 and the A3, doing the job of both sails better.

The sail flies with a tighter luff, allowing more aggressive steering and easier sail trim, while advanced fiber placement within the laminate ensures stable flying shape and comparable weight to an A3. Covering an extremely wide range, combined with a unique furling system, the sail’s superior characteristics make it a winner.

Doyle’s innovative engineering capabilities and advanced sail construction techniques continue to develop winning sails for its customers.

To find out how Doyle can help you make the most of your time on the water, call your local Doyle loft or visit doylesails.com.
see who'll be sailing in your area at www.summersailstice.com.

**June 28-30** — 8th Annual Tahiti-Moorea Sailing Rendezvous, hosted by Latitude 38 and Tahiti Tourisme. This free event is focused on cross-cultural appreciation and includes a cocktail party, a sailing rally to Moorea, Polynesian music and dance performances, and cruiser participation in traditional Tahitian sports — the highlight of which is the six-person outrigger canoe races. Info, www.pacificpuddlejump.com.

### Racing

**Apr. 28-May 3** — Antigua Sailing Week, now in its 46th year, is the grandaddy of all great sailing weeks in the tropics. After years of 200+ entries from around the world, Sailing Week took a big hit with the Great Recession a few years back, but is now back to the five races plus the Yachting World Around the Island Race. So maybe the old girl is back up to speed. But, like us, she's gotten more mellow with age. Info, www.sailingweek.com.

**May 3-5** — 41st annual San Diego Yachting Cup. Info, www.sdyc.org/yachtingcup.

**May 4** — Long Distance #2. SSC, www.stocktonsc.org.

**May 4-5** — The 113th annual Great Vallejo Race, one of the biggest races on the Bay, which also serves as the YRA season opener. Info, (415) 771-9500 or www.yra.org.

**May 4-5** — Commodore’s Cup. HMBC, www.hmbyc.org.

**May 7, 1934** — Famed yacht designer William Gardner died in Bay Head, New Jersey.

**May 11** — X-Bay Regatta, a cross-Bay race starting in the Central Bay and finishing at SBYC. CYC/SBYC, www.cyyc.org or www.southbeachyc.org.

**May 16, 1992** — America³ successfully defended the America’s Cup by handily defeating Il Moro di Venezia V.

**May 18** — YRA WBRA #3, CYC, www.yra.org.

**May 18-19** — Elite Keel (Etchells, Express 27, J/24, Knarr, IOD & Open 5.70). SFYC, www.sfyc.org or (415) 563-6363.

OCSC® SAILING
Inspire Confidence™
1 Spinnaker Way ~ Berkeley, CA
In sailing you earn trust through experience and performance. For the past 45 years, Andersen has built a reputation of trust by creating reliable winches with the distinctive, highly polished stainless steel drums. Remarkably lightweight, Andersen’s unique Vertical Power Rib® drum provides superior grip while reducing vertical friction to minimize wear and overrides.

If you want better sailing, choose the best winches.

Andersen Winches are now proudly distributed in the USA by Ronstan

While we’re excited about this fall’s rally, we have to caution everyone to be a little flexible with the starting date. Right now, our plan is to depart San Diego on Monday, October 28, with the Kick-Off Party at West Marine the day before. However, it’s possible that the schedule for both events will have to be moved up one day.

The situation is that, while Mexico Tourism has promised to be far more supportive of the event than ever before — details once we can get confirmation — changes in Mexican immigration law, combined with a lack of facilities in Ensenada, are making things a little uncertain. In years past, it wasn’t a problem for the Ha-Ha fleet to make stops at Turtle Bay and Bahia Santa Maria before actually checking into Mexico at Cabo San Lucas. That is now against Mexican law, as you have to check in at a Port of Entry — Ensenada is the only POE north of Cabo — before you can make a stop anywhere along the coast of Mexico. So it’s possible the Ha-Ha fleet will have to start a day early to allow everyone time to check into Mexico at Ensenada.

The problem with this is that the Port Captain, Customs and Immigration in Ensenada don’t have the facilities or manpower to handle what would be an onslaught of Ha-Ha paperwork with any kind of dispatch. As a result, we’re working on alternative solutions. Could Mexican officials come to San Diego so boats could check in ahead of time? Could 90% of the paperwork be done in advance so that it would take only 10 minutes per boat to check in if everyone absolutely had to stop in Ensenada? Could members of the Ha-Ha fleet be granted an exemption from the law and not clear in until Cabo, as before?

The answers aren’t clear at this point, in part because it’s hard to know who has authority in each of the Mexican departments and ultimate authority overall. We have some things in our favor, however. The participants in both the upcoming Ensenada Race and Little Ensenada Race face similar, but not identical, problems. Plus, we have excellent relations with Jorge Gamboa, director of the Mexico Tourism Board, as well as the mayor of Ensenada, who sees the Ha-Ha as very important for Baja and Mexico.

We hope to get definitive answers about the starting date.

Joseph — You can sign up for this fall’s milestone Baja Ha-Ha — it’s going to be the 20th — online starting on May 1 when Lectronic Latitude is posted, usually around noon. Keep an eye out at www.latitude38.com or, after May 1, head straight over to www.baja-haha.com.

and check-in procedures as soon as possible, but until we do, everyone is going to have to be flexible. Flexible means that we may depart on the 28th or we may depart on the 27th. The one thing we’re going to make certain is that all boats should be able to arrive in Cabo by Friday, November 8 at the very latest, giving all crews time to have fun in Cabo but still get back to work by Monday, November 11.

DISAPPOINTED OVER SUNSAIL’S CLOSURE

I want to comment on the unfortunate timing of Sunsail’s decision to close their Sausalito base. Less than a year after it opened, they decided to pull the plug — with the America’s Cup coming up and just as business was building. I’ve worked closely with Sunsail base manager Travis Lund over the past year, and have the highest regard for the work he did.

I managed Club Nautique through the financial crisis of 2008-09, and came out on the other side with an intact fleet and a sailing school that was stronger than ever. From my experience, I think that Travis was doing all the right things. He kept his costs down, promoted the business at every opportunity, and was friendly and respectful to the people working for him. His hand-picked list of skippers represented some of the best sailors and sailing instructors on the Bay.

I can only speculate on Sunsail’s reasons for closing the Sausalito base after such a short time, but what frustrated and astonished so many of us who were involved with Sunsail was the failure at the corporate level to market the base effectively via the internet. Their web presence for the typical Google search was virtually nonexistent.

The eight new Beneteau F40s that Sunsail brought to the Bay last May were powerful high-performance racer/cruisers. They were fast, fun and physical — if a bit intimidating for novice sailors. Sunsail’s concept in bringing the boats to San Francisco was to charter them for teambuilding events and private racing campaigns, following their model in Port Solent, England. I liked both the concept and the boats, and, as one of their most active skippers, I had high hopes for what Sunsail could accomplish in the Bay Area. Everyone I know who came in contact with the boats was excited by them and the potential of the fleet.

It was with great disappointment that many of us received the news of Sunsail’s plans to leave the Bay Area. But there are still people who recognize the promise of the Sunsail fleet, so don’t be too surprised if a phoenix rises from the Sunsail ashes!

Jim Hancock
Former General Manager, Club Nautique
Sunsail Skipper / Solstice, Freya 39
Alameda

Jim — We’re also disappointed to see Sunsail close the San Francisco base. We don’t know why management made that decision, but we assume that they weren’t seeing the returns they needed on their considerable investment. You can read more about the closure and new offers by the company in World of Charter. But we’ll pull for your phoenix.
Faster, farther

For over 20 years, North 3DL® thermo-molded sails have set the world standard for upwind performance and durability. Now, they'll last even longer! North’s revolutionary new 3-ply Performance Films* deliver unprecedented laminate bonding, softer handling, improved UV protection and longer sail life.

Contact your North Sails representative today and discover how far superior North 3D sailmaking technology can take you.

NEW FROM NORTH!
Performance Films™
- improved bonding
- improved flexibility
- improved UV protection
- improved durability

*North Performance Films are standard on 3DL 680 thermo-molded sails and available on all other 3DL styles.

A reader asked if an Olson 30 was a good boat for cruising on San Francisco Bay. In my opinion, the Olson 30 is a great boat for cruising the Bay.

I bought my Olson 30 *Killer Rabbit* new in the late ’70s, and actively raced her in the one-design fleet for many years. I’m now in my 80s, and when I do get on the water, it’s more than likely with older, inexperienced crew. Since I use the smaller storm sail sheeted to the cabin-top winches, there are few, if any, keel boats that are easier to sail. With the storm sail rigged to the cabin-top, the jib sheets are very accessible in the center of the boat. And flying a very small jib means it can be trimmed quickly and easily by inexperienced or unathletic crew. With a main and even a storm jib, the Olson 30 is very easy to sail in light or very heavy wind.

The publisher wrote that if you singlehand an Olson 30 up The Slot when it’s blowing, you will get trashed. With a small enough headsail, I don’t think you’ll get trashed on an Olson in any condition.

With the Olson’s sails properly set, the tiller can be controlled with very little effort. Although it was in the distant past, I singlehanded *Killer Rabbit* home from Tinsley Island — about 70 miles, mostly upwind — several times. To make it easy to drive, I simply tied a bungee cord to the tiller, attaching the free end to each side. This enabled me to relax in the cockpit for extended periods, change sails, or tack her effortlessly.

I hate to motor and love the fact that the Olson 30 will move through the water in only a few knots of wind. As a result, I don’t think I’ve used more than 10 gallons of gas in the 30+ years I’ve owned my boat.

The cockpit of the Olson 30 is the most comfortable of any boat I have sailed on. It’s due to the angle and height of the backrest and the distance from the opposing seat walls. The absence of headroom in the cabin has never been a problem for me, since I never go below while sailing on a boat of any size. The Olson is a comfortable boat to sleep on alone — or with a partner.

When I initially was looking for a boat to buy, I heard that the Olson 30 was too light and therefore didn’t sail to weather worth a damn. While I was discussing this concern with someone, an owner of an Olson 30 happened to overhear me. Based on Don Keenan’s letter in the February issue, I think it was him. My recollection of the conversation that took place 30-plus years ago — with a Santa Cruz sailor I didn’t know and never saw again — was that he had sailed his Olson 30 to Hawaii in the Singlehanded TransPac, and after crossing the finish line, reversed course without having set foot on shore, and sailed all the way back to California. Without a motor.

This sailor rhapsodized about the windward ability of the Olson during this return trip. I recall his saying the size of the boat and performance seemed in perfect harmony with the waves, and the delivery had been an extremely enjoyable experience. I bought my Olson as a result of that unsolicited endorsement.

When I raced my Olson, the boat had a PHRF rating of 96, and usually was the first start in the one-design racing fleets. With a full crew and a spinnaker, the Olsons really scream in strong winds. In fact, on a reach in flat seas they are capable of planing in excess of 20 knots. I did this about three times with my boat, and it was a thrilling experience. That said, you need an experienced crew to race an Olson 30, and certainly when carrying a chute in strong winds.

Numerous Olson 30s have raced to Hawaii, and several times Olsons were the first boats to finish. What a terrific.
It’s more than rope off a spool, it’s a custom engineered technical package from Easom that gives you the winning edge.

Grand Prix experience will help cruisers and racers alike get the best results and the best value.

Call for a cruising or racing estimate. You’ll see the difference with better prices and performance.
seaworthy and fun boat!

Bill Coverdale
Killer Rabbit, Olson 30
San Francisco Bay

William — Your report brought back fond memories of racing against you in Olsons many years ago. We probably got trashed singlehanding in The Slot because we always tried to fly too big a headsail. We’re re-learning that when singlehanding, a tiny bit of headsail is all that you need in even moderate winds.

The only point on which we’d have to disagree with you is the viability of sleeping on the Olson. We destroyed a disc in our back from bending over so much while cruising one of our previous Olsons in the Sea of Cortez. And while we’ve found the quarter berths to be comfortable, we’ve also found them very difficult to get into and out of. Of course, we’re 6’4”.

One of the great things about having the Olson La Gamelle in the Caribbean is how much attention she attracts. A few Sundays ago we singlehanded La Gamelle at high speed to, through and around the packed Columbie anchorage at St. Barth, and the captains and crews of all the glitzy big boats hooted and hollered. As we whizzed by one big fellow enjoying a cocktail while floating in an inner tube, he gave the boat an appreciative glance and asked what she was. The fellow was Sir Bobby Velasquez, owner of Bobby’s Marina for about a zillion years, and a nearly unbeatable sailor with his Beneteau First 45 S/L’Esperance. We wish George Olson could have been there to bask in the appreciation.

But less than 10 gallons of gas in more than 30 years of sailing? If that’s not Zen sailing, we don’t know what is. Please send us your address so we can send you a Zen Sailing Federation T-shirt.

EFFEKT & SALLY HUSE

Hans Roeben and Sally Huse (far right) are treated ‘royally’ when they bring ‘Latitudes’ on their Royal Clipper cruises. Like Latitude, ‘we go where the wind blows’ and where Latitudes are very much in demand. Keep up the good work, Latitude, because you have worldwide readership.

With 11 cruises on Royal Clippers under our belt, the officers and crew now know when a stack of Latitudes is coming their way. They treat us royally as a reward for bringing them. We’re sending this from aboard the Royal Clipper in the Windward Islands of the Caribbean.

Hans and Sally — Thanks for the kind words and for helping distribute Latitude.

In 2006, Tom Perkins invited us to the launching of his 289-ft Maltese Falcon at Portovenere, Italy. Our table companions at the launch dinner included an interesting Swedish couple. At one time they had owned a small shipping company, but the man’s dream had always been to design, build and operate large clipper ships. So when they sold the shipping company, they went all in, with him designing the first of several Royal Clipper ships. And he designed everything, including all the plumbing and the entire electrical system. No wonder he looked a little tired.

While Perkins was still trying to decide whether to build Falcon, with her unique and unproven Dyna-Rig, he spotted the clipper at Antibes or some other port in the South of France. Noticing that the vessel had automated sail trim, he asked permission to come aboard. He was welcomed, and the owner/designer, who just happened to be aboard, was happy to go through the automated sail setting, trimming and striking process for him. The two dynamic men naturally became good friends.

The Swedish couple — we’re sorry we can’t recall their names — went on to build four or five more clipper ships, which as you know are operating in the Med, the Caribbean and the Far East.

We remember asking the man’s wife if she was involved in the company. “Oh, yes,” she replied, “I’m often on our vessels, and I know the names of every one of the crewmembers.” No wonder the company has been so successful. We also asked her what kind of occupancy their clipper ships had. She briefly seemed a little insulted before replying, “Every cruise is sold out.”

I LUSTED AFTER HER EVERY WEEKEND

I was heartened to read that someone — Deyess Payne of Santa Cruz — has rescued the Marples 55 catamaran Crystal Blue Persuasion from what seemed to be imminent demise. When she was in her homeport of Charleston, Oregon, a number of years ago, I used to lust after her every weekend as I walked the docks looking for a sailboat to buy. Eventually she sailed south and had some adventures and misadventures. She was later brought back to Santa Cruz in pretty bad shape and left on a mooring to pretty much fend for herself.

CBP was built by Brian Skallerud of Skallerud Marine using nothing but the best materials and techniques. Her fit and finish reflected the high standards Brian adheres to when building all his boats. It took a crew of five 16 months to build the 55-ft cat out of five layers of four-mil akume plywood using epoxy/vacuum bag technique. Her hulls were finished off with two layers of glass and a beautiful Awlgrip paint job. Her rudders were a combination of stainless steel
The fastest sailing yacht in the world is here… you can be too!

(510) 236-1013
www.MarinaBayYachtHarbor.com
and high-density foam. During the construction, Brian worked with John Marples to make some aesthetic changes to the stern and house windows. She was launched in April, 2001. Had CBP not been built so well, I fear that she would not have survived the time she broke free of her mooring and went onto the beach at Capitola.

Anyway, I thought Latitude readers and the cat’s new owner might appreciate the accompanying photo of CBP during her construction and launching. By the way, I recently talked with Brian, and he said he would be happy to help the young man who purchased the boat with design and repair advice. He can be reached at skallerudb@gmail.com.

Monty Beed
Sarrina, Ericson 35 Mk II
Charleston, Oregon

Monty — Thanks for the photo. Owners Larry and Gary Burgin sailed CBP in the 2008 Ha-Ha, then Gary continued on with her to the Caribbean side of Mexico, where he had been led to believe he could start a lucrative charter business. He had been misled, and the already underfinanced endeavor continued to go downhill.

Gary and the cat did make it back to Santa Cruz, but by that time the boat needed a lot of help that, for whatever reasons, Gary was unable to give her. CBP’s engines were neglected and in bad shape, and her rudders were badly damaged when she went onto the beach. It’s a sad story, as we always thought she was a fine-looking cat, and the Burgin family had a long and proud sailing history.

Deyess told us he was able to buy CBP ‘where is, as is’ for just $5,000. We’re not sure he has the big bucks to make a complete restoration quickly, but we’re hoping he can at least do it over time. And we’re glad to hear that her builder is happy to share knowledgeable advice.

⇑⇓

THE WEAKEST LINK — LITERALLY

I’ve seen lots of discussion in Latitude about anchors, chain, scope and so forth, but I haven’t read about what happened to us while pulling up our anchor at Anegada in the British Virgins. Our 3/8-inch chain broke!

At the end of our chain, buried in sand, was a 121-lb (!) Rocna anchor that didn’t budge under whatever force it took to part the chain. Fortunately, we had put a buoy on our anchor to keep others from dropping onto our tackle in the crowded anchorage, so recovering our beloved Rocna was no problem.

The chain break happened as we were raising the anchor in 8.5 feet of water. We motored forward and had brought in all but about 25 feet of the chain. While we were picking up the buoy with a boat hook, Moonshadow drifted back on the slack chain in a gust. The wind was blowing 20 with gusts to 25. The combination of the short scope, sharp impact, unyielding anchor and 14-year-old chain was evidently what was needed for one link to fail. (The chain has been well-used. In the last year alone, Moonshadow spent 190 nights on the hook.)

The weak link, about eight feet from the anchor, parted at the weld. There was some discoloration at the weld, which may have suggested corrosion within the weld. Sorry I can’t give any particulars on the chain manufacturer, as there were no markings. It had been put on the boat in New Zealand many
How You Sail On A Deep Reach Is Your Business

Keeping your boat in good operating condition is our business.

Everybody knows that a well-maintained sailboat is a safer sailboat. And that can make a difference when you’re pushing your boat to the edge.

Bay Marine Boatworks is where the sailor’s come to keep their boats ship-shape. A full-service boatyard in the full sense of the word, we offer a complete range of services at prices lower than the competition, and provide an accurate estimate up front. From bottom painting to complex fiberglass repair work, you’ll find we can handle all your sailboat maintenance and repair needs. Our mission is to guarantee absolute satisfaction to every customer. So bring your boat to us and give yourself some peace of mind.

years ago.

Despite the fact that we still have almost all our chain, I suppose we’ll be getting new chain.

John & Deb Rogers
Moonshadow. Deerfoot 2-62
San Diego / Caribbean

John and Deb — As we recall, some anchor chains broke in the storm of ’82 in Cabo San Lucas, initiating a chain reaction — pardon the pun — that put a lot of boats onto the beach. But other than that, we can’t remember any other instances.

The thing that is disconcerting to us is that, unlike some of the rusty chain we’ve used on our boats over the years, your chain looks — at least on the surface — to be in excellent condition.

How long is anchor chain good? Certainly it’s going to depend on what kind of chain you buy, as the quality varies tremendously. But we don’t have any idea, and didn’t find much guidance on the internet. Indeed, one poster recommended stainless chain as being the longest lasting. But at the terrific Ship Chandlery in St. Barth, there is a big sign in the stainless chain bin warning that the chain is not for overnight anchoring.

Can we get some informed answers on this question?

THERE IS LUCK INVOLVED WHEN ANCHORING, TOO

I read with interest the letters in the April issue on anchoring techniques. I agree that anchor size and scope are very important, but the letter writers forgot one aspect — luck. Or the lack of it. I have two examples.

A tropical depression came through once while we were anchored in Pago Pago Harbor. Although we stayed put, many other boats dragged. When I tried to raise our anchor, I discovered that it was hooked on a one-inch steel cable. It took some time to bring the anchor to the surface and free it. In this case, the size and type of anchor, and the amount of scope, weren’t really factors. It was the cable that kept us in place.

The second time we were anchored off Hawaii in February, and the forecast called for a Kona storm. I put out our storm anchor with plenty of scope. It held for awhile, but then the wind started blowing in earnest. The wind, combined with the chop that developed, caused us to drag. I quickly deployed our second anchor, a 66-lb Bruce with 3/8-inch chain. That stopped the dragging. Or so I thought. The next day, when the winds had subsided, I raised my main anchor to find out that it was badly fouled on an engine block encased in concrete.

The lesson we learned is that the only safe way to anchor is to keep a good watch when it starts to blow.

CAN’T DISPLACE THE WINE SUPPLY WITH ANCHORS

I’ve followed the comments and suggestions on anchoring in recent Latitudes. As a singlehander who enjoys anchoring in the more isolated spots, I’d like to offer my insight into what has worked for me, and what might be applicable for other sailors.

There are endless combinations of anchors, rodes, seabeds, boats, wind and sea conditions. Arcturus carries four anchors and rodes, three of which are rigged. None of them is oversized, as that would reduce the room I have for wine.

While some skippers seem to get away with almost any choice of gear and very little effort — anchoring roulette? — I believe that applying a back-down load is an essential step that is often ignored. If the force applied by my boat in reverse exceeds that night’s expected blow, I can sleep well. Occasionally skipping that step, or more commonly ‘not reefing when blah, blah, blah...’ allows me to retest my strength, endurance, vocabulary and, sometimes, night vision.

Paul J. Wall
Arcturus, Endeavour 32
Huntington Beach

Paul — That’s a great reminder, as failure to back down — and pretty hard — is perhaps the leading cause of dragging. In the Caribbean, home to thousands of bareboat charters, it’s not uncommon to see anchors deployed while the boat is still moving forward at three to four knots. If the captain and crew are really good, they get the dinghy in the water and take off to the nearest watering hole before the wind has a chance to blow the boat to leeward to see if the anchor is holding.

WE GOT OUR TICKETS!

I have to say that I’ve found the official America’s Cup website to be about as useless as they come. I couldn’t find any of the info I wanted about tickets to the venues I wanted. Who designed that thing?

Thanks to Latitude for coming to the rescue and keeping us out-of-towners up to date on what was going on sale when. We are now proud owners — well, buyers — of pre-sale tickets to the first two days of the Cup proper. We can’t wait!

Bass Sears
Hailey, Idaho

Bass — We’re glad we could be of assistance.

We’re a little alarmed that a ‘season ticket’ for the entire event can cost $999 — ouch! — although it’s claimed that one-third of them have already been sold. There had better be plenty of places to watch the racing for free — standing is fine — or we’re going to have a philosophical problem with this.

WE’RE A DUTCH COUPLE LOOKING FOR A BERTH

My wife and I are cruisers on Witte Raaf, our 46-ft sailboat. We left The Netherlands seven years ago, crossed the Atlantic to the Caribbean, then continued on to Alaska via the Panama Canal, Mexico and Hawaii. We fell in love with Alaska, so we spent two summers there, returning to Bellingham, Washington for the winters.

This summer we will explore British Columbia, and at the end of summer sail to San Francisco. We would very much like to spend four to five months — October to February? — in the Bay Area, and are looking for a berth to rent. Can you or anybody give us advice or help us get a berth?

Jan & Joanneke Buurma
Witte Raaf, 46-ft sloop
The Netherlands
IT'S A MARINER'S FACT:
In three minutes a vessel will travel a distance in hundreds of yards equal to her speed in knots. For example, if your speed in 6 knots, you will travel 600 yards (1,200 feet) in three minutes.
Jan and Joanneke — Thanks to the America’s Cup, there is going to be a big demand for slips on San Francisco Bay this summer. But you’re in luck because the Cup racing ends in September, which is before you plan to get here. Plus, October is the time of year when many San Francisco Bay boats take off for the tropical waters of Mexico. That being the case, we don’t think you’ll have any trouble getting a berth.

You might not get a slip in San Francisco proper for a month at a time, but surely you’ll be able to find one in Marin or in the East Bay, both of which have great transportation options to San Francisco. Like wine? October would be a great time to take a slip up the Napa River and do some day trips to the wine country.

How to find marinas with slips available? The pages of Latitude 38 have great ads.

I HAVE TO SIDE WITH MR. BADGER

I’ve been following your debate with Tony Badger about the relative danger of long-period swells with interest and amusement. In your April issue response, you left it at “we’ll leave it to the readers to decide who they think is right.”

I, for one, think you both make valid points, but overall, I have to side with Mr. Badger. I think you actually agree on the key points: 1) Long-period swells are technically more powerful (i.e., have more energy) than shorter-period swells of the same height, but 2) in deep water, long-period swells are much safer and more comfortable (and in fact, may barely be felt).

The recent letters I read — from Tony Badger in December and Pat Nance in February — never said anything about it being safer and more comfortable to sail in 8-ft waves at 8 seconds vs. 16 seconds. Both these writers referred to the danger of long-period swells in shoaling water, such as the Farallon Bank.

When approaching shore, long-period swells break at a greater depth than short-period swells of the same height (and they approach more quickly). For this reason, it does seem worth warning mariners that if there is an extremely long-period swell, they should stay farther from shallow water (e.g., farther from the Farallon Islands or the Potato Patch) than they would under ‘normal’ (shorter wave period) conditions.

I also agree with Mr. Badger that an article on waves — with input from a physical oceanographer — would be interesting. For example, some oceanographer should be able to tell us under what combination of wave height and wave period the Potato Patch or South Bar will break.

The debate about ‘sneaker waves’ seems like mostly a matter of semantics. My impression is that the NWS is using this term — which I’ve noticed myself in weather forecasts — to refer to the fact that with long-period swells — which are generated far away — the wave trains are more likely to separate out into groups with significant lulls between. It would be good to have an oceanographer confirm that as well.

Thus beachgoers, or mariners close to shore, might mistakenly believe the waves aren’t very big (during the lulls), only to be taken by surprise when a big set comes in. It seems that this is a good thing for the NWS to warn the public about, and ‘sneaker waves’ seems to be a term that the public can easily understand.

Although I think you’ve been coming across as unreasonably stubborn in this discussion, I wouldn’t have followed the debate if I didn’t read Latitude every month, which I do because it is such a great magazine. Keep up the good work!

Laird — Thanks for the kind words. This lamentable brou-haha started when a reader asked when it would be the safest and most comfortable to sail outside the Gate. As we recall, we wrote that the safest conditions were when there were long-period swells, the swells weren’t too big, and the wind wasn’t too strong, and there wasn’t too much wind against the tide. Sorry if we come across as stubborn, but that’s what we’ve always believed in, and what we continue to believe in.

Alas, the narrative somehow turned from sailing in general into a shoal water-only issue, and some people seeming to think we’re responsible for the deaths of people who drown chasing their poodles into big surf.

We sail under the premise that in order to be safe, you must stay in water deep enough so that it doesn’t make any difference how big the swell is or how long or short the periods of the waves are. If you’re in deep enough water, you don’t have to worry about either of those things. And frankly, we find it easier to determine the depth of the water than to try to calculate the danger presented by some combination of swell size and direction/wind wave size and direction/wave period/ebb and other factors. To our way of thinking, deep water, and plenty of it, is the simple and safe solution.

How deep is deep enough? All-universe navigator Stan Honey says the minimum for him is 2.5 times the sum of the maximum forecast swell and wind wave heights. If there’s a 10-foot swell running and three feet of wind waves, he wants to be in more than 30 feet of water—which means he doesn’t want to be on the Potato Patch or the South Bar. Sounds good to us. And we presume that he would factor in a greater margin of error if there were a significant ebb. The US Sailing investigating committee for the Low Speed Chase tragedy cited another commonly used rule of thumb for minimum depth, which is to multiply the deep-water significant wave height by three. Or four for a greater margin of error. In the case of a 10-ft swell, that’s 30 to 40 feet. That’s another rule of thumb we believe we can live with.

However, even if you’re in deep water, some of the things that can make you miserable, injure you, and break your boat are — who would have thought? — short-period waves. You know, flying off the top of ‘eight by eights’ that have no backs, breaking human and boat ribs, destroying blocks, snapping sheets, and dropping masts. And if that’s not good enough for you, try getting violently thrown head first from one side of the salon to the other in a short-period beam swell.

So as we said, if you or anyone else prefers to sail in short-period swells, be our guest. But our choice will always be adequately deep water, and the longer the period of the swell, the better.

(See this month’s Cruise Notes for reports on two boats that were wrecked as a result of being in shallow water, killing some crewmembers and some rescue personnel.)

If the National Weather Service wants to warn people about big waves by giving them a special name besides ‘bigger than normal waves’, we think they can do better than ‘sneaker waves’. After all, ‘sneak’ has sort of a fun connotation and makes such waves sound like attractive nuisances. We suggest ‘killer waves’ or ‘death waves’.

the Sausalito Police have phone/video footage to back me up.

Anyway, the one I believe to be Les — not the one “with the bionic leg” — met me on the ramp to Pelican Yacht Harbor, and asked me if I knew where Slip 52 was. I explained that there are two docks at Pelican, the A Dock and the B Dock, so the slips are numbered A34, B25, and so forth. When I asked about the kind of boat he was looking for and who the owner was, he got all vague and evasive. He said his friend with the bionic leg knew the boat, but was waiting in the truck because he didn’t want to “stump around” looking for the slip.

There’s more detail that I won’t go into, but those clowns certainly weren’t partying aboard Darling as of 4-4:30 on Sunday afternoon. Quite the contrary, they were searching for a specific slip in a different marina.

Jim Nisbet
Argo, H-28
Sausalito

Jim — According to prosecutors, the Darling theft was the case of one mastermind and two innocent but seemingly not-very-bright acquaintances. We’re not sure we believe that. We’re not sure the authorities believe it either, but what they believe and what they can prove beyond a reasonable doubt to a jury are probably two different things.

THEFT FROM BOATS IN THE PACIFIC NORTHWEST?!

Thefts of and from recreational boats and other vessels don’t seem limited to any particular locale. It’s dangerous up here in the Northwest, too.

In the April 11 Olympian, reporter John Dodge wrote that the steering wheel from the 100-year-old tall ship Adventuress had been stolen last October while she was docked at Percival Landing in Olympia. The schooner has long taken students and the general public out on sailing trips, serving as a floating environmental classroom. Sound Experience, the non-profit group that owns and operates the Adventuress, found a replacement in a nautical antique store in Seattle. Roger Ottenbach, the store’s owner, loaned the non-profit the wheel, and agreed to sell it to them at cost — $900 — if the original wheel couldn’t be found.

Despite a search by divers, the original wheel was never found, at which point Olympia-area Rotary Clubs took over. One member had a machine shop, and took care of re-machining the wheel’s hub so it would fit. That meant only one public sailing event was missed. Other Rotary Club members conducted an information fundraising drive to pay for the wheel.

Since the 1950s, my impression has been that they — along with Shamrock, Endeavour and other J Class yachts — were scrapped for World War II. What’s the story?

By the way, while in the Bay of Naples, Italy, in 1956, Lowell North and I noticed a large sloop about a mile away and thought that she might be an M Boat such as Patolita or Windward, the largest sloops that we knew were still afloat. We headed over to find out, and the mystery boat turned out to be a J Class boat owned by a Brazilian and based in the Med. Is it fair to say that she was about 50% longer and taller than any other boat that existed at the time?

Jim Hill
Palo Alto / Sayulita

Jim — It is confusing, as some of today’s J Class yachts are originals, some are replicas, and some are new builds to old designs that had never been used.

Between 1930 and 1937, a total of 10 J Class yachts were built, six here in the United States and four in Great Britain. Three of those 10 — Shamrock V, Endeavour and Velsheda — survived and are being sailed and raced today. All of the survivors were Brit boats designed by Charles Nicholson.

Three other boats that had been built to the International Rule 23mR also raced in J Class regattas or were converted to J Class boats. Three of these — Astra, Cambria and Candida — survived and sail today. We remember seeing Cambria sail in the 2005 St. Barth Bucket.

John Williams’ 2004 launch of a replica of Ranger, with help from Reichel/Pugh and John Elliot, revived the J Class. The next new build was Jim Clark’s Hanuman in 2009, a replica of Endeavour II with help from Gerard Dijkstra. A year later, Harold Goddijn launched Lionheart, a Starling Burgess and Olin Stephens design refined by Andre Hoek. Last year saw the launch of Rainbow by Chris Congriep. The original design had been done by Burgess, but was updated by Dijkstra.

There are three J Class yachts currently in build. One is Atlantis, a Frank Cabot Paine design being updated by Hoek. Another is Cheveyo, a Burgess and Stephens design that is being redone by Sparkman & Stephens. And finally, there is Britannia, a George Leonard Watson design being tweaked by Steffano Fagrioni for Sigurd Coates.

J Class boats differ significantly in overall length, waterline length and displacement. As a result, they don’t have the same rating, so the first J that crossed the finish line in St. Barth wasn’t necessarily the winner. But they rate pretty close to each other, so the racing was spectacular.

There were bigger boats than J Class yachts that survived World War II. For example, the 181-ft schooner Adela, which was built in 1918 and also raced in this year’s Bucket. We’re

told that Hanuman and Adela will both be at least stopping at San Francisco Bay this summer.

**BOATS AT REST IS OUR FAVORITE**

I want to make sure Latitude readers are aware of our upcoming opening of ‘Impressionists on the Water’ at the Legion of Honor Museum, June 1-October 13, which coincides with this summer’s America’s Cup on San Francisco Bay. The exhibition celebrates the French Impressionists’ fascination with recreational and competitive sailing, and offers numerous models — some life-sized — in addition to fantastic paintings and detailed works on paper that illustrate the artistry and technicality of boating and nautical navigation.

To be located in the Legion of Honor’s landmark building overlooking the Pacific Ocean and the Golden Gate Bridge, the ‘Impressionists on the Water’ exhibit will obviously be a lovely complement to the America’s Cup experience.

Clara Hatcher
Fine Arts Museums of San Francisco
de Young | Legion of Honor

*Clara — We think the exhibit is a smashing idea, and can’t wait to see it. Monet’s Boats at Rest at Petit-Gennevilliers is one of our favorites.*

**FOR SAFETY’S SAKE, GOING AGAINST MY GRAIN**

I’m not a big believer in rules, but sometimes they are useful. After being robbed while at anchor at Caleta del Campo, Mexico, earlier this year, Judy and I are now trying to adhere to the following rules every time we find ourselves in an anchorage with a limited number of other cruising boats:

1) During the day, we find a low-power channel — 13, 15, 17, 67, 77 — that is not used in the area. Some of these channels have restrictions on their use or are used by ports, but if in an isolated area, it shouldn’t be a problem to find one that isn’t used. The idea is to find a channel that has no traffic at night, then have all the boats in the anchorage use it exclusively as a distress or safety channel. If nobody else is using it, we can leave the radio on and not get woken up all the time by non-emergencies. We use low-power to lessen the chances that we will pick up more distant traffic on the channel.

2) When going to bed, we switch to the agreed channel and increase the volume to a level that will wake us up.

3) When we get up in the morning, we switch back to whatever channel is used locally as a hailing channel.

4) We do not use the ‘security channel’ for anything but safety/distress calls amongst our group. If we want to see if another boat is awake, we call on the hailing channel, not the temporary security channel. If people use it to see if the coffee is ready next door, they will wake up others and defeat the purpose.

So far this idea has met with virtually universal acceptance when we have suggested it to other boats in anchorages with us. It’s certainly no assurance of absolute safety, but it does mean others can be made aware of a problem immediately. When we were robbed in Caleta de Campo, two of the other

four boats in the anchorage had their radios off, and did not know about the robbery until the morning. If the robbers had decided to hit another boat, there was no way we could have warned them, or gotten medical or other assistance if we had needed it.

How are we coping with the fact that we were robbed while at anchor? We’ve convinced the Grand Poobah to let us be entry #1 in this fall’s Ha-Ha.

Bill Lilly & Judy Lang
Moontide, Lagoon 470
Chacala, Mexico

Bill and Judy — We think your idea is a good one. We also suggest having a big “Go ahead and make my day!” flare gun or two handy but out of sight. Not only can it help warn nearby boats of potential danger if you’ve been robbed, but in some cases it could be waved around preemptively to discourage an uninvited boarding. We know you had one and it didn’t help other boats the night you were robbed, but we think several flares might do the trick.

⇑⇓

FLOATING BOXES

I hadn’t been to the British Virgins in about 10 years, but just got back from a bareboat charter. The sailing was as good as ever, although it seems as if there are nearly twice as many bareboats as before. They were everywhere!

But the thing that surprised me the most is how much bigger today’s bareboats are than they were 10 years ago. The monohulls are a lot bigger, mainly because the wider-than-ever beam is being carried almost to the transom. But it’s nothing like the increase in volume of the interior and exterior of the catamarans. Most of the new cats, even ones as small as 40 feet in length, have some sort of upper steering station. But they are boxy, with none being more boxy than the Lagoons. I can’t say that I like the look of the exteriors, but lordy are they comfortable when at anchor!

A feature common on the new cats is hardtops. The whole cockpit is covered with a hardtop rather than a soft bimini, both for protection from the sun, and also so there are places for people to sit on the ‘second story’. While it might be a bit of an illusion, the covering makes the cockpits seem even larger than if they were uncovered.

Another apparent recent innovation is forward cockpits. The woman at the charter base told me they were added to the Leopards, Lagoons and some other brands because the combination of the afternoon sun and the easterly trades in the Caribbean meant that all the charter guests were getting burned to a crisp by the late afternoon tropical sun. Some of the Leopards even have hard ‘sunscreens’ over the forward cockpits, sort of like those found on cars in the ’50s. I can’t imagine they are very aerodynamic.

Indeed, none of these charter cats seemed to be rocketships. Not that any of the charterers seemed to care.

As much as boats have changed, the constant trades, the warm and clear water, and the friendly people are as I remember them from before. The only thing I don’t like about the Caribbean is that it’s so far away from the West Coast. It

THE MOORINGS

The latest trend in charter cats is forward cockpits to prevent sunburns.

makes me wonder why The Moorings or some other big charter outfit doesn’t have a base in Banderas Bay, Mexico. La Paz is nice enough, but Banderas Bay seems like the ideal place for one-week charters.

Neil West
Carson City, NV

Neil — You’re absolutely correct; today’s charter boats are so much bigger for the same length. All you have to do is compare a 40-ft monohull from the early 1980s with a modern 40-ft monohull. What a difference!

We’ve never understood the obstacle to bareboat charter fleets operating on Banderas Bay. After all, they’ve had charter fleets in La Paz for years. The ideal situation would be to have the fleet in Banderas Bay for the winter and then move it to La Paz for the summer. For selfish reasons, we don’t mind that Mexico doesn’t have big bareboat charter fleets.

WHY THERE?

What a lucky dog you are to be able to sail the Caribbean for three months a year! I wish I could be you. But why do you seem to spend all your time in St. Barth?

Paul Smith
Sacramento

Paul — It’s not quite as glamorous as it seems. Our typical day is as follows: Dinghy the half-mile or so to shore at 8 a.m. After a shower, pain au chocolat, and coffee, we’re in our office — an old tattoo parlor with no windows — by 9 a.m. We work really hard until about 1:30 p.m. We take a half-hour to an hour break for lunch, then it’s back to the office until about 4:30 p.m. for a half-hour break. We’re back in the office from 5 p.m until just before it closes at 7:30 p.m. We have a cold beer either while watching Sports Center at Oubli or with friends at Le Select. We dine out on Wednesdays, Fridays and Saturdays. Most nights we get back to the boat between 9 and 11 p.m. When we get back to the boat, we crash immediately. That’s our routine about 60% of the time, and includes Saturdays and Sundays just before deadline. We do get more time right after deadline and early in the cycle, but not that much.

Our goal has been to sail La Gamelle around the island 10 times in the three months we’re here. After getting everything set up, we got off to a good start, with two circumnavigations in three days. Thanks to the Bucket, the Voiles, deadlines, having to go to St. Martin to buy batteries and fuel, having to make boat repairs, computer screw-ups and internet interruptions, and too much wind, we haven’t been around again since. Thus we’ve got our work cut out for us to achieve our goal.

There are other fine islands in the Caribbean, but the truth of the matter is that all the great boats, and most of the great sailors, come to St. Barth. So it’s more efficient to let them come to us rather than try to chase them all over the Caribbean. Then, too, we’ve already been to the BVIs, St. Martin (several times), and St. Kitts. Plus we’ve been to all the other islands a number of times over the years. None are as clean, safe or exciting as little St. Barth.

The other influence is that we’ve had many great friends on St. Barth for years, so it’s like a home to us. Plus, St. Barth has more unusual flowers, if you know what we mean, than anywhere we’ve been before. Nonetheless, if we didn’t have to work, we’d love to head down-island and hang out in places like Grenada for a couple of months.

being the first Indian — East Indian — to circumnavigate. If memory serves, Robin Knox-Johnston, the first person to sail solo and nonstop around the world, built his Atkins 32-ft ketch Suhaili in India while serving in the British Army. The Indian skipper says he had been dreaming about circumnavigating for 14 years. I wonder if Suhaili played any part in his dreams.

Tim Schaff
Jetstream, Leopard 45
Road Town, Tortola

Tim — We have no idea. Knox-Johnston actually served in the Merchant Navy and Royal Navy Reserve, not the Army. After finishing Suhaili, he suggested that his wife and daughter join him for the passage from Bombay to England. His wife was so underwhelmed by the suggestion that she left him, but they were remarried several years later and had more children and many grandchildren.

When he got back to England, Knox-Johnston decided to enter the Sunday Times Golden Globe Singlehanded Around the World Race. He was the only one of nine entrants to finish, as Bernard Moitessier famously decided to drop out to follow his bliss. Knox-Johnston donated his prize money to the family of competitor Donald Crowhurst, who had apparently committed suicide during the race. Knox-Johnston has continued to be a relentless adventurer, doing another solo circumnavigation in his late 60s.

Abhilash Tomy is a Lieutenant Commander in the Indian Navy, and he completed his circumnavigation in 156 days, which is exactly half the number of days Knox-Johnston took. Tomy finished just two days after Guo Chuan, the first Chinese citizen to complete a solo circumnavigation. We expect more Asians in their wakes.

I know what would bring more interest to the America’s Cup. Gambling. I don’t like casinos, and those Indian casinos in particular. If you’re going to gamble, I say go to Vegas and do it right. Better still, if I could afford it, I’d go to Macau.

But I think casino games are a drag. Blackjack, poker, roulette, craps — what a snore. If you’re going to gamble, I think gambling on sports is the most fun, because you get to use your brain a little. Since I’m a sailor, I want to be able to gamble on the America’s Cup. What are the odds of being able to gamble on the Cup, and what are the odds on the various teams?

Sausalito Slim
Sausalito

Slim — The odds that you’ll be able to gamble on the Cup are good. There are several internet sites based in England that list the America’s Cup as an event that can be bet on, although no odds have been posted yet. However, it’s illegal for Americans to gamble online, so you might have to go overseas and use an assumed name. Frankly, we think it would be the most fun if there were a ‘Gambler’s Area’ set aside for degenerates at the
America’s Cup Village.

As for the odds, most experts seem to favor the Kiwis, although in order to get into the Finals they may have to build a boat more suited to the stronger winds of July and August. Oracle, meanwhile, can concentrate on a boat that will excel in the slightly lighter conditions expected for the Cup itself in September.

We’re picking Oracle to retain the Cup, primarily on the basis of Jimmy Spithill’s being a guy who can get the job done. But we’re not betting the ranch, because we don’t own a ranch.

Anybody remember the year a gambling outfit in Costa Rica promoted gambling on the TransPac? Talk about an event that would be easy to throw. Does anybody know anybody who made a bet on it?

⇑⇓

A DIFFERENT HOTEL CALIFORNIA

I read the April 19 ’Lectronic piece about the SC70 Hotel California in the Caribbean. I think it’s nice that the current owner has not changed the boat’s name.

After years of crewing for me and others, my old sailing pal John Wintersteen got a SC40 for the 1983 — I think — TransPac. Then he bought a new SC70 and named her Hotel California. It was while he and his crew were doing MOB drills for another TransPac that he dropped dead at the wheel. If a sailor has to go, what better way?

John was a great guy, and seeing the boat name again reminded me of him. He was part of the funniest and best crew there ever was.

Mike Kennedy, Sr.
Los Angeles

Mike — Even though there were only something like 22 SC70s built, two of them were named Hotel California. First there was Wintersteen’s, and then there was Steve Schmidt’s cruising version, the only one of those ever made, named Hotel California, Too. We’ve got a Changes on Hotel California, Too, in this issue.

WEAR IT!

A sunny day on the water can turn deadly in seconds. California ranks #2 in the nation for boating accidents and fatalities, with boating mishaps causing more than 50 deaths in the state in 2011 alone. Chances of survival in the water go down drastically with decreasing water temperatures, especially if you aren’t wearing a lifejacket.

We’re hoping to increase PFD safety awareness, as approximately 84 percent of drowning victims in recreational boating accidents were not wearing a lifejacket. That according to the U.S. Coast Guard 2011 Recreational Boating Safety Statistics.

The North American Safe Boating Campaign — simply known as “Wear It!” — is a year-long effort in the U.S. and Canada focused on spreading the message of boating safety and the critical importance of consistent PFD use. The National Safe Boating Council is a leading partner of the campaign.

Dan Hedman
Paul Werth Associates

Readers — Latitude 38 encourages everyone to wear PFDs when on boats or whenever at risk of falling into the water.

new LED lights. My girlfriend took over the projects of the bedding, the head and setting up the galley. We will be ready for the season.

Greg Clausen
Wisdom, Santana 3030
Tiburon

Greg — If it weren’t so great we wouldn’t keep saying it, but the 16-ft 12-volt LED strip lights for $15, and the $5 dimmers for them, have been brilliant on ‘t Profligate, completely transforming the ambience of the salon. The outdoor version of the lights has done the same for the cockpit. We got ours through Amazon. And we hear that Latitude Editor LaDonnab Bubak followed our lead on her boat and is equally thrilled.

†‡THROW THEM BOTH OUT?
I have a thought concerning what’s supposed to be ‘cruiser friendly’ racing in the Banderas Bay Regatta. I think the Notice of Race for any future BBRs and similar events should include the following line: “Any — ANY — contact between racing boats will result in the disqualification of both boats.” After all, we’re supposed to be having fun out there. Alternatively, maybe they should just drop the Class A fleet altogether and keep it a cruisers’ race. You know, a ‘race your home’ regatta. Just my two cents’ worth. Thanks for the coverage.

Capt. Debbie Orlando
Puerto Vallarta

Capt. Debbie — We understand your sentiment, but don’t think your first suggestion is a viable solution. After all, it means that a cautious, safety-first, rule-abiding sailor whose boat got hit by a reckless, drunken, incompetent fool could be disqualified. That wouldn’t be right.

We think your second suggestion, chuck Class A — where most of the boats aren’t cruising boats — is more reasonable.

†‡JUDGE JUDY FOR THE SUPREME COURT
It’s too bad our government can’t be run with the efficiency with which the Banderas Bay Regatta Protest Committee handled the dispute between Camelot and Blue. And nice work, Latitude, for making the process and results available to your readers. It’s the first time I’ve ever witnessed how a protest is handled. I found it to be impressive and educational.

Herb Clark
Hotel Charlie, Catalina 25
Chico YC

Herb — A summary of that process can be found in this month’s Latitude, while the entire report can be found in the April 1 ‘lectronic.

If everybody in the judging process had been pulling down $400/hour, we don’t think it would have been so efficient. Government, including the judicial system, is inefficient because it’s so lucrative for those involved. Judge Judy for Swift Chief Justice!

†‡RACERS SHOULDN’T ORGANIZE CRUISER RACES
The incident involving Blue and Camelot at the Banderas Bay Regatta, which resulted in both of Blue tactician Mike Danielson’s legs being broken, is exactly why I rarely participate in racing events, even those billed as ‘cruising races.’ I know enough about the incident and the players involved to have a strong opinion about who was in the right, but that’s not the issue I wish to address. It’s not that I don’t enjoy racing. I was bowman on a couple of the top Schock 35s during

their heyday, and then graduated to the Santa Cruz 70s before deciding I wanted to be a cruiser.

I was sorely tempted to participate in this year's Banderas Bay Regatta, but I hadn't been happy with the changes to December's Banderas Bay Blast, also billed as a cruiser regatta. During the Blast, the race organizers actually had the multihulls starting with monohulls of similar ratings. Apparently no consideration was given to the fact that the two types of boats sail and maneuver differently. In addition, the starting line was far too short for cruising multihulls — even if they weren't mixed in with the far more maneuverable monohulls. I feared that the Banderas Bay Regatta would be more of the same, and I think my instincts proved me correct.

I believe that there is a fundamental problem with 'cruiser races' that are organized by sailors who are really racers. It is the distinction between organizing an event that's designed for excitement and competition rather than for safety and fun.

Problems are bound to occur when people who are racing their homes are put into the same class as people who are racing their toys. It's easy for someone on a racing boat to intimidate a cruiser on a cruising boat. Similarly, it can be difficult for a laid-back cruiser who hasn't raced much to anticipate tricky situations he/she may be getting into with an aggressively sailed racing boat. Even if there is no yelling or collision, it's unlikely that the frightened and intimidated cruiser will dare race again.

I have presented the problem, so I will present a solution that I think is the hope of salvaging cruiser racing in Mexico. My solution is that there needs to be separate racing for racers and for cruisers. Those who have to win in order to have fun need to be kept apart from those who just have to sail to have fun. I know 'racer' and 'cruiser' are not mutually exclusive terms, but I think I can make a distinction. If you are living on your boat, you're a cruiser. If you are not living on your boat, she's a toy and you're a racer.

The bottom line is that Camelot's cruising plans were put on hold while the BBR incident was resolved, while Blue sat empty in her slip as she normally does when she's not out proving she's "the winningest boat on Banderas Bay." As I write this, there are rumors of lawyers getting involved, at which point you know nothing good will come of it.

For me, the attraction of racing was the adrenaline rush of the moment. It was the endless rehashing of the race later at the yacht club, and the maniacally competitive sailors, that bored me silly. I decided to become a cruiser, as it better suited my interest and temperament.

I understand that there are people who feel they have to prove they are better than everyone else, no matter the cost. I avoid them. That's why I don't race. Not even in so-called cruiser regattas, where many of the participants aren't cruisers at all.

Captain Glenn Twitchell
Beach Access, Lagoon 380
Newport Beach / Mexico

I'm disappointed in your article on the collision and injury that occurred in the Banderas Bay Regatta. There are two sides to most stories, and you only portrayed one.

Without agreeing on who had rights when the Hunter 54 Camelot and the J/160 Blue collided, we can safely recognize that the captain of Camelot failed to comply with "RRS Sect. B. 14 Avoiding Contact: A boat shall avoid contact with another boat if reasonably possible . . . ."

And, 16.1 Changing Course: "When the right-of-way boat

changes course, she shall give the other boat room to keep clear.”

And Maritime Rules of the Road: Pt B Steering & Sailing 8. Action to avoid collision. "Actions taken to avoid collision should be positive, obvious, made in good time.”

I know for a fact the driver of the J/160 had Blue’s wheel hard right, upwind, to the lock, just before and during the collision. The skipper of Camelot did not have control of his vessel at time of collision. He had room to bear off and did not. Serious injury to the tactician on Blue was the outcome.

Too many times skippers and crew forget the first rule of maritime safety and racing, as put into law through COLREGS and the Racing Rules of Sailing. That rule is the first responsibility of the skipper is to avoid contact.

Terry Robertson
PRO and Merchant Marine Master

Terry — You're correct, of course: it is the responsibility of the skipper of a boat to avoid contact. But your assertion that "we can safely recognize that the captain of Camelot failed to comply" is false. If you'd read the Protest Committee's report in the April 1 'Lectronic, you'd know that it was Blue, not Camelot, that was found guilty of not keeping clear. Blue's GoPro video of the incident was posted on Sailing Anarchy, home to many fervent racers, and the overwhelming majority of them agreed with the Protest Committee's ruling.

You also appear to not know that the Protest Committee ruled that Camelot could not have gone down to avoid a collision because there was a boat with rights to leeward of them. There is a good reason that windward boats are required to keep clear of leeward boats. If they weren't, everybody would just reach down the starting line, crashing into one boat after another.

With regard to the actual contact, we think you should consider the possibility that it was caused by the helmswoman on Blue putting the wheel hard over, which you seem to think was a good thing. But as you surely know, the turning axis of a sailboat is her keel, so when the helm is put hard over, she's going to 'hip-check' any boat just to leeward of her. Once you get really close to another boat, the only way to avoid contact is for both skippers to very gradually steer away from each other. As intuitive as hard-over might seem to a novice, it's exactly the wrong thing to do in such a situation.

When you say that you're a PRO, we presume you mean that you're a qualified Principal Race Officer. If so, how can it be that when we asked how you knew something was a "fact," you replied you knew from the "Testimony of the of J/160 skipper and crew." You're a PRO and you consider the testimony of one side to be "fact"? Why then wouldn't the testimony of the other skipper be "fact" also?

NO LONGER INTERESTED IN CRUISER RACES

The collision, serious injury and protests in this year’s Banderas Bay Regatta are an example of why I no longer participate in that event. A bunch of assholes who race J Boats and have a profit motive have turned what once was a cruiser regatta into a 'win at all costs' event. We never had protests and the like until sailors who should be competing elsewhere forced their politics on the milquetoast race committee.

How many boats participated this year? There's your answer to the problem.

PWMN — While we can somewhat agree with your basic

thesis, your supporting evidence isn’t as strong as it could be, and we think the situation is more nuanced. For instance, this year’s fleet consisted of 52 boats. While there may have been a greater turnout in the very early years of the BBR, when it seemed as though every cruiser on Banderas Bay showed up, this year’s participation was greater than the average of the previous 10 years.

Secondly, you refer to a “milquetoast race committee.” However, the Vallarta YC recently denied entry to a boat that, as we understand it, they felt had been sailed too aggressively in a previous BBR, and whose skipper they felt had been too argumentative for the spirit of the event.

To illustrate the dilemma when hosting a ‘cruiser regatta’, while the organizers felt the boat may have been sailed too aggressively for the spirit of the event, we have reason to believe that the organizers knew the boat had nonetheless sailed within the racing rules. The problem was the owner of the less-aggressive boat became so angry that, after the race, he grabbed some kind of bat, and he and his crew took off with the intent of letting the other skipper know just how they felt. Fortunately, the other skipper had taken someone to the airport, so there was no violence.

There seems to be a major philosophical divide between mostly more competitive sailors and less competitive sailors — such as ourselves — over the question of whether there can be such a thing as ‘toned-down racing’. Their argument is that the rules exist for good reasons, one of the primary ones being to prevent accidents. Our response is yes, the rules do need to be there for safety, for without them there would be chaos. However, we also believe that boats can be raced with different degrees of intensity, aggressiveness and margins of error. And should be, depending on the type of regatta. When cruisers race their homes with family and friends, it’s more likely that things will go wrong than on frequently raced boats with regular crew. For example, somebody’s sister may not let the traveller down fast enough to duck a crossing boat. Or a less-experienced skipper with a dirty boat bottom may miss a tack and stall in front of a mark. If some boats are sailing very intensely, these screw-ups could lead to close situations, if not collisions. But if all participants recognize what is supposed to be the light-hearted nature of a cruising event, and maintain generous margins of error, there shouldn’t be any yelling or screaming, let alone collisions.

We’re confident that toned-down racing can work, because it’s been working for years in the multihull class of the BBR, where the boats are much larger and much less maneuverable than smaller monohulls. And because it’s been working for years in events such as the Antigua Classic Regatta, the St. Barth Bucket and others, where special rules and ‘spirit of regatta’ rules have been invoked.

A big issue in cruiser regattas is intimidation. As the owners of a 63-ft long, 30-ft wide, 13-ft tall catamaran that can easily sail in the teens, we’re fully aware of our potential to scare the living daylights out of just about anybody else on the course. In the spirit of fair play and caring more about everybody’s having fun than winning, we never try to use that advantage. Indeed, we don’t believe even the hint of intimidation has any place in a ‘cruiser regatta’.

We understand exactly why you’ve made the decision not to participate in ‘cruiser regattas’. We hear it all the time from other sailors, even very talented ones who have raced at the highest levels for many years. Until this philosophical difference of opinion can be settled, we fear cruisers will avoid any kind of racing in droves. After all, the risk/reward equation doesn’t compute for them.
"The chief mate of the Pequod was Starbuck, though born on an icy coast, seemed well adapted to endure hot latitudes...He was by no means ill-looking; quite the contrary. His pure tight skin was an excellent fit; and closely wrapped up in it. Starbuck seemed prepared to endure for long ages to come, and to endure always, as now; for be it Polar snow or torrid sun, like a patent chronometer, his interior vitality was warranted to do well in all climates."

— Herman Melville, 'Moby Dick', Chapter XXVI
I’d like you to consider the implications of both your Lectronic articles on the Banderas Bay Regatta incident between Camelot and Blue. Your first article seemed to be almost entirely based on rumors and one side of the story. You seem to have made little effort to get Blue’s side of the story, and the tone of your article placed the blame on them.

I think you also need to appreciate the reach of your publication, and realize that there was potential for those on the jury to have read it, possibly making it harder for them to come into the protest unbiased.

Your second article about the end of cruiser racing in Mexico was alarmist. Yes, the incident was terrible, and no one wants to be involved in anything like that. But to me, your logic is the same as that of somebody who hears of a plane crash and never wants to get on a plane again — forgetting about the millions of flights that land safely each year. Let’s remember the many BBR races that have gone on in the past 20 years without incident.

If you want to promote cruiser racing in the bay as you say you do, you should take this opportunity to use your publication to teach cruisers the rules, admit that there are risks in yacht racing, explore how to minimize them, and have the entire cruising community come out as more knowledgeable and safe racers.

Now an article on the Vallarta YC claims that some of your quotes are false. You have certain responsibilities as a journalist, and this protest hearing has severe implications no matter how it ends up.

Max St-Maurice
La Cruz, Mexico

Max — You claim our report was “... almost entirely based on rumors.” We’re going to prove you wrong right now.

There were five boats in the immediate area of the collision between Camelot and Blue. We received eyewitness accounts from very experienced racers on four of the five boats: 1) Craig Shaw, skipper of Camelot, professional rigger, a sailor with 41 years of racing experience; 2) Eugenie Russell, crewmember on Olas Lindas, which was just to leeward of Camelot, long-time skipper, sailing instructor, and racer; 3) Bill Lilly, skipper of Moontide, long-time racer, who was close to the start and a witness at the protest hearing; and most influentially to us, 4) Randy Hough, Principle Race Officer, on the race committee boat, who sent the following email to the skipper of Camelot:

“I’m sorry to have missed you at Vallarta YC tonight. We talked with Ken [Sears] [of Blue] and many witnesses. Blue put herself into a bad position with nowhere to go. They were not aware that Olas Lindas was taking you up and that you had nowhere to go. Eugenie from Olas Lindas was very open, and it was her account that helped everyone understand what happened. From our vantage point on the RC boat, we were not aware of any contact. It looked like a barging/over early “no harm, no foul” sort of thing, and we expected Blue to come charging around the RC boat to restart. I heard that you and the crew were very concerned when you heard Mike was injured and I thought I would bring you up to date."

You still want to claim that our Lectronic reports were based on rumor? Furthermore, we also received an email from a normally reliable source that Blue had admitted fault. Upon further investigation, it turns out this was a misinterpretation of a person’s actions, but it was the information we got.

The only boat or person who suggested that Camelot was at fault at the time was ... well, there wasn’t anyone that we knew of. As you might remember, Blue did not file a protest ei-

ther immediately after the incident or within the time prescribed in the race instructions. If anyone had made any statement or taken any action to indicate Blue thought they hadn’t been at fault, we would have written the story differently. But when there is a collision between two boats and one boat drops out and doesn’t protest, it doesn’t take the ghost of Bertrand Russell to deduce that the other boat seemed to think they were at fault.

It is true that we could have attempted to call Mike Danielson and the Searses. But to be honest, we are — or at least were — friends with all three, and given the accounts of others and the lack of a protest, we thought it would have been unnecessarily ghoulish.

Indeed, we’d been through something similar a year or so before in the Pirates for Pupils Spinnaker Run for Charity. There was very light wind at the start, and in an apparent attempt to find more wind or less current, Danielson took Blue far inshore of all the other boats, into what we and many others thought was dangerously shallow water. Well, she hit a reef with such force that we watched a crewmember fly off the bow like Superman. Blue remained trapped in the rocks for something like 15 minutes while we stood by.

We later saw the Searses in the yacht club restaurant and got the kind of smiles that we interpreted to mean, ‘Thanks, but we really don’t want to talk about it.’ Who could blame them? It had been what tennis players call an ‘unforced error’ and resulted in the boat’s having to have an expensive haulout and inspection. With Danielson badly injured after this year’s collision, and everybody in the area saying Blue had clearly been at fault, and without any hint of protest on the part of Blue, we decided not to contact Danielson or the Searses with any of those ‘How do you feel?’ questions. In retrospect, maybe we should have, but we thought we had good reasons not to at the time.

That said, the moment we heard that Blue was planning to file a protest, we published a new ‘Lectronic citing the reason they were allowed to make a protest after the normal protest deadline, and outlining the grounds on which they might protest.

You accuse us of having taken the tone that Blue had been guilty. We did, and given the information that was available at the time we wrote what we did, we think it was reasonable. Curiously, your letter, written before the protest was held, seems to take the tone that cruiser Camelot was obviously guilty. “You should take this opportunity,” you wrote, “to use your publication to teach cruisers the rules.” How do you feel now that the protest committee has ruled that it was Blue, not the ‘cruiser’ Camelot, that was guilty of violating one of the most basic and important of all racing rules? Is it not you who were guilty of judging too soon — and when you, unlike us, knew full well there was another side of the story?

As for your suggestion that our first piece influenced the jury, we find that to be ridiculous and insulting to all three members of the jury. We’re confident they had the ability and integrity to determine the facts and make a ruling on their own. Particularly as there was a video of the incident.

You think our saying that the incident might be the end of cruiser racing in Mexico was “alarmist?” Are you aware that Randy Hough, the event PRO, says that after being so generous with his time and boats for 30 years to help racing, he’s done? Are you aware that some members of the Vallarta YC have called for the club to disassociate itself with the BBR? Are you aware of the once-good friendships that have been destroyed as a result of the collision and what followed? Are you aware of frequent participants in the cruiser races in Mexico who say they will never sail in an event with certain other boats or
sailors again?

Unlike you, we’ve been responsible for founding and putting on countless cruiser races for charity in Mexico, from Zihua SailFest to Sea of Cortez Sailing Week to the Banderas Bay Blast and more. As such, we think we know more about hosting cruiser races than you do. We can tell you that when something does go wrong, as it did in the BBR, people — and seemingly Americans more than other nationalities — seem to look around for someone else to blame and/or sue. If your name is in any way associated with an event and if you have any assets, you might as well have a big target on your back. Even if people don’t follow through on their threats to sue, who needs it? If you put on events, even supposedly ‘strictly for fun’ charity events, you soon learn that Clare Boothe Luce was right: ‘No good deed goes unpunished.’

As for your saying we want to promote cruiser racing on Banderas Bay, given what’s happened, we’re not at all sure that we do. We’ll be in Banderas Bay this month to discuss the issue with certain people, but if cruiser racing is going to be about risky sailing, unnecessary collisions, injuries, and ensuing bitterness, we don’t want any part of it. So maybe you should step up to the plate and put your name behind an event. Then maybe you’ll understand what it’s like to potentially be accused of being responsible for whatever crazy behavior someone in the fleet might engage in.

As for your condescending comment that we should teach cruisers the racing rules, do we need to remind you that not only was the ‘cruiser’ in this incident right and the ‘racer’ found to be wrong, but the helmsman on the ‘cruiser’ has 41 years of racing experience?

As for the business about quotes. We edit for brevity and clarity. After the protest committee ruled against Blue, Danielson asked that the protest be reopened based on the minor changes. The request was immediately denied.

Just so everybody knows where we stand with regard to Mike Danielson, we don’t know of anyone who has promoted sailing as relentlessly as he has, and we’ve been putting on cruiser events with him, and participating in his events, for years. That said, we’ve always been at odds, and sometimes to a great extent, over how competitive those events should be.

⇑⇑CRUISERS WITH A LONG RACING RESUME

I’ve tried to keep my mouth shut about the unfortunate incident with Blue in the Banderas Bay Regatta, but I would like to respond to some people who seem to dismiss us as ‘cruisers’ who don’t know anything about racing or the racing rules.

My dad and I both started racing 41 years ago. We started with Shillelagh, a Luders 16, and raced her in just about every race and series on the Columbia River. When he bought his tall rig Ericson 29 Donna Gay, we each raced our own boats, and also raced on other boats. We participated in almost every race there was.

My first Oregon Offshore Race was in 1977, and I subsequently did about 15 of them, most of them on my Columbia 43 Adios, and mostly with my mom and dad, who owned her at the time. I’ve also done three of them on their newer boat, the Hunter 54 Camelot. We also won the 1985 Oregon Offshore Overall with Adios.

Between Adios and Camelot, we’ve also done about 12 Swiftsure Races out of Victoria. Our best was a second with Adios on the Long Course. I also skippered Adios on my own with my ex and a bunch of friends at Whidbey Island Race Week in 1985. We were written up as the most improved boat for the week. I have to say that I was initially intimidated at

The starts by all the hot Seattle sailors, but soon realized that they were almost all barging. So I just did my timed starts, and we did very well.

We also continued to race Adios in almost every race on the Columbia River, with Mom, Dad, myself and crew. We also did the week-long Six Pac Race in the summer.

In 1988, we raced Adios to Hawaii in the Pacific Cup with Mom cooking an awesome turkey dinner at the halfway point. Dad, a couple of crew and I sailed Adios home in 16.5 days.

We also won our class in the Six Pac a few times, and after it got changed to Gorge Race Week in the early ‘90s, we took overall honors with Adios four times and also got a second overall.

In 1998, we raced Camelot to Hawaii in the Pacific Cup, with Mom once again making a full turkey dinner at the halfway point. Once again we came in fourth after 10 days at sea. I skippered Camelot home to Portland with a friend and one pick-up crew in 16 days. Dad also raced in the 1979 TransPac as crew on the Cascade 42 Nimble.

In 1998, I sailed about 8,000 offshore miles on Hunter 54s, sailing Camelot from Portland to San Francisco, then to Hawaii and back to Portland, then crewing for Hall Palmer on his 54 in the Ha-Ha. I also crewed on Talion in the ‘07 Ha-Ha, and skippered Adios in the ‘09 and ‘10 Ha-Ha’s, as well as skippering Camelot in last year’s Ha-Ha. I’ve also bashed Adios back to Portland from Cabo twice, and am just getting ready to bash Camelot back to Portland for the summer.

I realize that this might be too much information, but I hope it clears up any misconception about our racing experience and our knowledge of the racing rules.

multihulls to california

After two winters of successful racing in the Caribbean, San Franciscan Peter Aschenbrenner’s 60-ft Nigel Irens/Benoit Cabaret trimaran Paradox is, according to multihull guru and crewmember Cam Lewis, headed for San Francisco. It might have something to do with the fact that the America’s Cup is being sailed in multihulls this summer.

Paradox took four bullets in last month’s Voiles de St. Barth, and prior to that had missed setting a new Caribbean 600 record by just 11 minutes — after 40 hours of racing in typically challenging Caribbean conditions. Paradox screamed past us — we were on the Santa Cruz 70 Hotel California, Too — four times in the Voiles de St. Barth and looked magnificent doing it.

Paradox is a cruising boat, albeit an unusual one. Aschenbrenner wanted a very fast trimaran that he could cruise short-handed across oceans without professional crew, so he. Irens and Cabaret dreamed up a tamed-down version of the wild ORMA 60 ocean racing trimarans.

For example, Paradox has a much shorter mast and a beam of 48 feet rather than 60 feet and, because of a modest cruising interior, displaces more. She’s also equipped with a hydrogenerator and fuel cells, so the only time she really needs to use her engine is when getting off the hook — to which she always lies stern-to.

Since we had Lewis’ ear, we also asked him about his reported association with Thomas Siebel’s MOD70 trimaran Orion, which is being shipped from Lorient, France to Mexico. A February press release said that Orion would be “under the hand” of Lewis, and that he was eager to show Americans “how fast and fantastic these amazing machines are.” Although Lewis says that the sailing conditions between California, Hawaii and Mexico are incredible for the MOD70s, he told us his participation in the Orion project is anything but certain.

Nonetheless, after testing on Mexico’s Banderas Bay for three months, Orion will be brought to San Francisco Bay in July for the America’s Cup. We’re not sure how Oracle’s Larry Ellison is going to feel about Siebel — a former employee, and the owner of a company Oracle bought for billions — showing up at the America’s Cup with a much less expensive trimaran that’s not only ocean-proven, but nearly as fast as the AC72s. But one can guess.

Another multihull — this one a catamaran — is also now on her way from St. Barth to California. But her ultimate destination is Newport Beach, not San Francisco.

It was only a few years ago that Lloyd Thornburg was attending the prestigious Art Design College in Pasadena and sailing out of Marina del Rey. “I had a Soling named Chaos that I would sail all the time, usually to the end of the Santa Monica Pier and back,” he told Latitude. “I loved it, especially sailing the boat back into her slip.”

Lloyd is returning to California — although only briefly — with a much larger and more exotic boat. “I ordered a Gunboat 66 catamaran a few years ago when I was 28,” he told Latitude. “The Gunboats were being built in South Africa, so I figured I’d fly down, spend a week selecting options, then fly home and wait for her to be completed. I soon learned that having a big boat built is a complicated process. I ending up living in South Africa for a year until Phaedo was done.”

The jovial Thornburg, who splits time between homes in Santa Fe and St. Barth, didn’t waste any time entering his brightly-colored all-carbon Phaedo in major races in the Caribbean and Atlantic. We don’t have a list of them all, but they included a couple of Caribbean 600s, a Voiles de St. Barth, some races in Antigua, a TransAtlantic and England’s classic Fastnet Race. To get an idea of what the hard-
— the big 2-0

other dose of Ha-Ha hilarity and glorious off-the-wind sailing.

So if you’ve been procrastinating on casting off your docklines to enjoy a dose of cruising, this could be your year. Online registration officially begins May 1 at noon at www.baja-haha.com. The price remains the same: $375 per boat, or $325 if your boat length or your age is less than 35. Singlehanders are not allowed. On the contrary, even if you’re used to running your boat as a mom-and-pop operation, we highly recommend taking additional crew — you’ll have more fun and get more sleep! See our online Crew List at www.latitude38.com and make plans to attend Crew List Party on September 4.

multihulls — cont’d

driven Phaedo looks like under sail, check out the April 17 ‘Lectronic.
The big Phaedo news is that she left St. Barth on April 13, under the direction of Aussie skipper Paul Hand, for the Panama Canal and a delivery up to Newport Beach. She’ll be hauled in Newport and have her rig pulled in preparation for July’s TransPac Race from Los Angeles to Hawaii. It’s a pity, but it appears that her only multihull competition will be a Lagoon 450.

When asked where he would be during the delivery, Thornburg laughed. “I sail every mile.” Following the TransPac, he and Phaedo will continue on around the world — and rather quickly, we suspect.

Thornburg confesses that he sometimes misses those times sailing his smaller and simpler boat “... when I didn’t need four people to go sailing.” That being the case, he’s having a Goat Island skiff built in St. Martin, and will have it shipped to Hawaii at the completion of the TransPac. “At just 15 feet, we can store the skiff on Phaedo’s cabin top during the circumnavigation,” said Thornburg. “I’m looking forward to doing lots of sailing.”

— richard
transpac time

Speaking of the TransPac Race, Transpacific YC Commodore Dave Cort says, "It's going to be a great one!" The entry list as we went to press shows 62 entries, including a 100-footer, at least three 'classics', a slew of Santa Cruz 50s, 52s and 70s, TP 52s, R/P's, and a number of 40-ft rockets. There's still time to get your name on the list, but you'd better hurry because the entry deadline is June 1. Go to www.transpacrace.com for details.

— ladonna

2013 TransPac Race Entry List (as of 4/23)
1) Alchemy, Andrews 68, Per Peterson, San Diego
2) Alpha Puppy, 1D35, Alex Farell, Mountain View
3) Amari, Hanse 63, Damon Fisher, Malibu
4) Bad Pak, STP 65, Tom Holthus, La Jolla
5) Beecon, TP 52, Isao Mita, Yokohama, JPN
6) Between the Sheets, Jeanneau 49, Ross Pearlman, Calabasas
7) Bodacious IV, SC 52, Jeff Urbina, Elmhurst, IL

oracle wins acws

There was plenty of close racing during the America's Cup World Series event in Naples, Italy last month. But when points for the Series were tallied, Oracle Team USA came out on top yet again by winning the match racing and making a strong showing in the fleet racing, thus succeeding in their bid to sweep the three-venue, ACWS 2012-13 season.

Building on the previous America's Cup World Series successes of Oracle Team USA helmsman Jimmy Spithill, the team's Naples crew, led by helmsman Tom Slingsby, continued the winning momentum by defeating Luna Rossa Swordfish in the match race final.

But in the Super Sunday Fleet Race...
launches boat #2

that same day — where possible points are greatly increased — Swordfish’s helmsman Francesco Bruni and his crew were determined to redeem themselves. And they did, with an adrenaline-charged win in an AC45 stampede where the lead changed three times. Swordfish came from behind on the final run to the finish line to score a win before an ecstatic crowd.

Although finishing second in that Super Sunday fleet race, Oracle Team USA took fleet honors for the 2012-13 season per Sunday fleet race. Oracle Team USA changed three times. Swordfish came from win in an AC45 stampede where the lead were determined to redeem themselves. And they did, with an adrenaline-charged win in an AC45 stampede where the lead changed three times. Swordfish came from behind on the final run to the finish line to score a win before an ecstatic crowd.

Although finishing second in that Super Sunday fleet race, Oracle Team USA took fleet honors for the 2012-13 season with a total of 245 points over second place Luna Rossa Piranha (191 points) and JP Morgan BAR (181).

Back on the Bay a couple days later, continued in middle column of next sightings page.
of such an undertaking, he seems to take it all in stride: "To me it's just one piece at a time."

The name Viveka is well known to many longtime Bay sailors. This 1930 Belknap and Payne schooner was owned from 1957 by Merl Peterson, who based her in Sausalito prior to a long stint in Hawaii and a seven-year circumnavigation. Just before Merl’s 90th birthday, however, he finally gave in to the pressures of age and ailments, and somewhat reluctantly agreed to sell his floating mistress to a well-heeled Brit named Rob Gray of Cowes’ Royal Yacht Squadron. Gray vowed to rebuild the Marconi schooner to museum-quality specs, and Rutherford got the gig, having completed two previous projects for the English gent: the refit of the Camper-Nicholson Eager and a 50-ft British sloop named Aeolus.

Now roughly a year into the project, Rutherford gave us a walk-through of the hull, which occupies much of the bustling Rutherford’s Boatshop in Richmond. We’ve seen plenty of wooden classics in all stages of construction and destruction, but it took a few minutes to figure out exactly what we were looking at. The master shipwright explained that while much of the original deadwood is still good, the original stem and horn timber, both oak, had to be replaced (with purple heart). All of the ribs and planking also are being replaced, using a process that’s almost the opposite of typical new boat construction. That is, the interior contours of the original hull planking were used as a mold from which new frames were fashioned. Originally, every third frame was sawn, with the two in between being steam-bent. Now every third is laminated oak, while the rest are steam-bent, similar to the originals. At this point all the ribs have been replaced, so the old double-planking is coming off and being replaced by a layer of cedar, covered by a layer of mahogany, all glued together. “This is the third large boat that I’ve done this way,” says Rutherford. “It’s a great way to do it.”

To our layman’s eyes it seems the most time-intensive pieces of this puzzle must have been the new solid-bronze floors. There are 76 of them and no two are alike. A multi-angled template had to be made from each original, so new ones could be forged by a foundry, then polished until they glistened back at the Boatshop. Every frame and the inside of all the cedar planking will be varnished, as perfection is important to owners like Gray, who, we’re told, takes great pleasure in occasionally observing the various stages of Viveka’s resurrection.

Although a tremendous amount of work has already been done, the project is still less than half completed. “After this come the deck beams, the deck and the interior,” says Rutherford, with the nonchalance of someone making a mental checklist of groceries to pick up on the way home from work. Two new masts and booms will also be built from scratch. Naval architect Jim Antrim is working on designs for these, as well as for the new interior. In order to reference Viveka’s exact hull shape for that process, the entire boat was laser-scanned from stem to stern.

“We’re talking about putting in two electric saildrives,” explains Rutherford. “Not very traditional, but the owner doesn’t want an engine under his salon.” If they go ahead with the plan, two genera-

oracle

Oracle enjoyed another success: launching their second AC72 at San Francisco’s Pier 80. Although the team’s CEO Russell Coutts didn’t give details about specific differences between the first and second boat, he did acknowledge the monumental effort put forth to produce it, while hinting at its much-improved speed potential: “It represents extreme performance and extreme engineering. It represents a significant improvement in performance over where we’ve been before. And probably most importantly, this represents the boat that is going to defend the America’s Cup, for America, in
— cont'd

America."

In the aftermath of the now-famous capsize of the team's first boat last October — which resulted in its wing mast breaking up offshore — they went through a frustrating period when on-the-water training was stalled. But now, with two boats on the water, it's obvious that spirits are high and all systems are go: "Now, it really feels like we have everything pointed in the right direction," said trimmer Joey Newton. "And we're starting to make pretty big steps. We've got high hopes for this boat, and I'm sure it's going to be fast."

— _andy_

perfection — cont'd

tors will power the house systems as well as the propulsion motors. "I think it's the way of the future. It's far more efficient."

Despite the enormity of the work that still lies ahead, this will not be a project that drags on for years and years, because Gray has a very important engagement to keep. The Royal Yacht Squadron is having its 200th birthday in 2015, and to celebrate they're staging a race from Newport, Rhode Island, to Cowes. "We have to be in that race," says Rutherford with conviction. And, of course, the boat has to get to Newport — which will not be accomplished by truck. Add to that the fact that Rutherford splits his time between supervising Viveka's transformation here in the Bay, and overseeing the rebuild of the 192-ft (LOA) schooner Coronet in Newport.

And you thought completing a do-it-yourself bottom job on your 36-footer was challenging!

— _andy_
looking back on low speed chase

One year after the tragic Low Speed Chase incident during the Full Crew Farallones Race, in which five sailors — Marc Kasanin, Alexis Busch, Elmer Morrissey, Jordan Fromm and Alan Cahill — died, survivor Bryan Chong reflects on that horrific event and the lessons he has taken from it:

There's nothing in life more absolutely devastating than the loss of a loved one. It creates a sudden vacancy once occupied by a meaningful connection, awakens us to our own mortality, and forces us to evaluate who we are, what we've done and where we're headed. For the family, friends and survivors, the April 14, 2012 Low Speed Chase accident at the Farallones changed our lives forever.

Alexander Graham Bell said, "When one door closes another door opens; but we often look so long and so regretfully upon the closed

continued on outside column of next sightings page

chinese & indian

Sailing his 40-ft sloop named for it's homeport, Qingdao, he arrived at the city's Olympic Sailing Center to a huge crowd of well-wishers. According to news reports, he was so anxious to see his wife and two sons that he couldn't wait for his boat to arrive at the dock. Instead, he
circumnavigators

leaped into the water and swam several yards to reach them.

"I'm so on the top of the world," said Chuan at the press conference. "It's such an unbelievable moment. 137 days ago, I wouldn't have imagined I could have a moment like this. It is a moment that could only happen in a dream."

A scientist by profession, trained in aeronautics and astronautics, Chuan was introduced to sailing only 15 years ago. But since then he's been on a fast track, participating in the 2006 Clipper

_The 'Low Speed Chase' tragedy last year has inspired sailors to ensure the safety of their crews._

door that we do not see the ones which open for us."

The door that opened for me catapulted me out of my old life and into a new one. It made me reflect on the decisions I've made in life and led me to readjust my priorities. It motivated me to stop procrastinating on things I'd do when I had 'enough time.' Instead of returning to work, I went on the road with my wonderful wife and infant son.

We spent the summer driving 10,000 miles in our yellow Westy Vanagon around the West Coast visiting friends and places I'd always longed to see — Yellowstone, the Tetons, Glacier, Pikes Peak, Telluride and Mt. Rushmore, just to name a few. I finally saw a concert at Red Rocks and a rodeo in South Dakota.

Then in September, instead of going home like responsible adults, we flew to Europe and kept adventuring until we ran out of good weather. All journeys eventually end and, in late January, we finally came back to Marin. The trip afforded me the priceless chance to spend a year bonding with my wife and son. It also gave me time to reflect on life, the accident and those I'd lost. It was the trip of a lifetime and I wish I could have shared it with all my Low Speed Chase crewmates.

Not a day passes that I don't think about what went wrong that day at the Farallones, and what can be done to prevent something like this from happening again. I was by no means an expert in safety before the accident, but since I've been home numerous sailing groups have invited me to share my thoughts on this topic. I always bring my tether and lifejacket with me to emphasize the basics, but I prefer to focus on the fundamental concept that safety only exists when everyone becomes a leader.

Safety leadership isn't always easy. It takes a willingness to speak up when others don't. It's choosing the safety of yourself and your crewmates over pride, appearance, comfort, costs or an engraved silver cup. It’s leadership by example and can be as simple as showing up early to make sure the safety equipment’s primed, double checking a teammate’s PFD cartridge and tether, tossing your favorite sailing hat in the water to force an MOB exercise, buying your friend a Spinlock lifejacket for their birthday, or setting the expectation that you’ll only crew on boats that take safety seriously. It’s investing in yourself by attending training, sharing what you learned with others, and following through when on the water.

Over the past year, I've learned that sailors aren't the only ones shifting their attention to developing a better safety culture. I spoke to the 200-person executive leadership team at PG&E, our local power company, which last year lost five people to accidents that might have been prevented with the proper use of safety equipment.

I now routinely find myself in safety discussions in which I'm called upon to offer my opinion. I'm still not an expert on all the safety practices, but I do see three areas where we can start focusing.

Resolve to be a leader on safety issues. You don't need to own a boat or be the most experienced sailor. You only need to care about the people aboard.

Take a sailing safety class. I recommend finding an interactive one with a small class size that requires attendees to calculate minimum depths using wave forecasts, set off flares, cut rigging, extinguish fires and enter the water with full gear.

If you're in a leadership position for a yacht club or sailing team,
recruit a safety instructor to host a seminar for your people.

In 2007, Ashley Perrin and Paul Cunningham, who both specialize in preparing boats for offshore sailing, attempted to host an ISAF-certified safety training class. Not enough people registered. Fast forward to today. In the 12 months since the *Low Speed Chase* accident, they’ve hosted seven classes at the San Francisco YC, all filled to capacity. Are we evolving as a sailing community? I’d like to believe we are.

A door has opened for sailors to embrace safety. Many have already walked through that door and taken leadership roles on their boats. I’ve seen others pulled through by spouses demanding they attend a safety class before their next ocean race.

As we remember those we lost at the Farallones, let’s also keep in mind that this is our moment to cement a culture of safety by continuing to invest in training and equipment that will save lives. I truly wish for the memory of Alan, Marc, Jordan, Alexis and Elmer to be the spark that transforms this community of sailors.

Be safe.

— bryon chong

As Bay sailors will recall, in the aftermath of the LSC tragedy, the Coast Guard’s Captain of the Port of San Francisco Cynthia Stowe took the unprecedented step of temporarily halting permits for all offshore races until a panel of experts could be convened to scrutinize the incident and make recommendations for safer operations in future offshore races.

As explained by Michael Moradzadeh in a Sightings section of last month’s *Latitude 38*, a permanent advisory group called the Northern California Ocean Racing Council (NorCalORC) evolved from that process. “Improvements include greater consistency in race practices, education and information about core safety issues such as wave formation, gear lists that are practical and effective, and communications methods,” reported Moradzadeh.

This year’s Full Crew Farallones Race is scheduled for June 15.

— andy

### 25th america’s schooner cup

The 25th anniversary America’s Schooner Cup was contested on April 6 — a picture-perfect day — on San Diego Bay. Eight classic schooners were at the start, but Dennis Conner and his crew aboard the lovingly restored B.B. Crowinshield-designed 40-ft *Fame* sailed away with the win. “We enjoyed a good start and were in the correct place when the major shift to the right took place,” Conner said after the race. “This enabled us to stay ahead of *Rose of Sharon*. *Rose* is the standard of West Coast schooners, so it was a thrill to beat schooner legend Byron Chamberlain and get our name on the beautiful new perpetual trophy.”

For his part, Chamberlain was a good sport about crossing the line behind *Fame* and correcting out to fourth overall. “To have the pleasure of racing against the most competent person in sailing history is indeed a challenge and a privilege,” he said. “Because of Dennis, we all strive a bit harder to sail a more competitive race. Nothing can be better than racing schooners with good friends aboard against schooners with good friends aboard. Everyone is always a winner.”

Perc Jones on his 72-ft Crocker-designed *Skookum III* corrected out behind *Fame* after a tense mark rounding with Bart Ziegler’s *Shine On*.

**circumnavigators**

*America’s Schooner Cup — (clockwise from above)* "Witchcraft* and ‘Maid of Kent’ wowed everyone on San Diego Bay; Dennis Conner’s ‘Fame’ earned her name; ‘Allure’, ‘Witchcraft’ and ‘Maid of Kent’ strut their stuff; ‘Skookum III’ showed her strength by correcting out to second overall; the lovely ‘Rose of Sharon’ gave ‘Fame’ a run for her money — and all the money went to the Navy/Marine Corps Relief Society.*

Round the World Race, the 2008-2009 Volvo Ocean Race, and the Mini Transat (transatlantic) in 2011. He was the first Chinese competitor in all three events. With such momentum we have to wonder what Chuan will tackle next.

Just two days later, Abhilash Tomy, a Lieutenant Commander in the Indian Navy, became the first Indian to circumnavigate solo, nonstop and unassisted.

Tomy, a maritime reconnaissance pilot, set sail from Mumbai on November 1 aboard the 56-ft INSV *Mhadei*, which was built for the Indian Navy. He returned...

schooners — cont'd

The boats were close together as they attempted to round the final mark but the current forced them to tack, bear away, and try again. The skilled hands onboard the boats made a sketchy situation go smoothly. 

_Maid of Kent_, a William Atkins design which has sailed in nearly every Schooner Race for the past 25 years, was skippered by Jerry Newton and filled out the podium. _Witchcraft, Shine On_ and _Scrimshaw_ rounded out the results, with only one boat — Guy Folsom's 1929 _Allure_ — taking a DNF after suffering a torn headsail.

The America's Schooner Cup was hosted by Silver Gate YC, with all proceeds going to the Navy/Marine Corps Relief Society. "It was a fine race," noted Chamberlain, "but allowing all of us to participate in Silver Gate YC's dedication to helping support the military, even in a small way, is most appreciated."

— brad brown & ladonna
Novice sailor Katie Flynn undoubtedly knew in advance that her crewmates aboard the Vancouver-based Beneteau First 40 Hydroquest were planning an equator-crossing celebration while en route to French Polynesia. What she didn’t know, though, was that her boyfriend, Ben Curry, was going to propose marriage as part of those festivities. We haven’t heard when the young couple will actually get hitched, but it seems to us they’re already experiencing a world-class honeymoon, having made landfall in French Polynesia’s remote Marquesas Islands last month after a fast crossing from Banderas Bay, Mexico.

Upon arrival, Cap’n Will Curry, Ben’s brother, wrote: “After 19 days at sea and 2,700 nautical miles (as a crow flies) we have made landfall. We are currently anchored in Taiohae Bay on the island of...”

If your boat is federally documented — as opposed to simply being registered in your state — expect to start paying a new $26 annual fee to renew. The fees are based on the actual costs of processing nearly a quarter million renewals annually.

“This doesn’t seem like a big fee if they ran the Vessel Documentation Center in a more efficient way,” says reader Tom Jeremiason. “By going to an online system, they’d save money on postage and paper. Another way to streamline would be to extend non-commercial/recreational...
documentation fee

vessel renewals from one to five years."

We’ve received a few other emails from readers upset about the new fee but we’re having a hard time getting too worked up over it. Not only does it seem very reasonable but, quite honestly, we’ve always been a little surprised that the feds don’t charge for annual renewals. It’s also interesting to note that the current fee structure for obtaining a Coast Guard Certificate of Documentation was put in place back in 1993!

local vendée aspirations

When Ronnie Simpson was lying in a military hospital after nearly being killed by an RPG in Iraq, the last thing on his mind was how he could inspire other wounded veterans by introducing them to sailing. For one thing, his focus was on recovering from massive internal injuries. For another, he’d never been on a sailboat in his life.

Now, nine years later, Ronnie’s sailing resume is starting to look like that of a rockstar: Two Singlehanded TransPacs (taking his division in last year’s event), a TransPac (with another to soon be added), a Newport-Cabo Race, and more than 30,000 miles at sea, with a handful of class and overall wins in local solo and doublehanded racing, and too many local offshore races to count.

On top of his busy sailing schedule, he’s also taken the lead — with the help of the nonprofit Hope for the Warriors — in developing and hosting a series of sailing clinics where combat-wounded vets taste the joys of sailing. One participant — a double-leg amputee — has gone on to compete in paralympic development regattas since learning to sail at one of Ronnie’s clinics. The latest was held last month in San Francisco, with the next slated for September in Newport, Rhode Island and two more in the fall in San Francisco. (We’ll have more on those clinics in a future edition of Latitude.)

”I’m really passionate about trying to inspire these men and women to find a passion and follow it,” said Ronnie. “I know what it’s like to have your whole future be a big question mark and to feel completely directionless. I honestly don’t know if I’d be alive right now if it wasn’t for sailing.”

Another thing he’s passionate about is solo ocean racing. As much as he’s enjoyed stints crewing for professional race teams such as Criminal Mischief (R/P 45), Holua (SC 70) and more, Ronnie loves the challenge of being completely responsible for himself out on the big blue. With two Solo TransPacs under his belt, he’s set his sights a little higher for his next big solo race: The 2016 Vendée Globe.

”The Vendée is the pinnacle, the Holy Grail of solo offshore racing,” he said. “I flew to Les Sables d’Olonne, France last year to cover the start of the race, and knew this was the next step for me. Just a few days ago, I was in Switzerland at an IMOCA event and I’m really excited to become a part of the class and represent the Bay Area and Hope for the Warriors on a global stage.”

Enchanted not only with France but also with the delightfully quirky...
vendée — cont’d

Ronnie Simpson hopes to find a bigger ride for the 2016 Vendée Globe.

competitors in the 2012-13 edition of the solo nonstop around-the-world race, Ronnie’s new raison d’être is to secure a sponsorship that will allow him to buy and outfit an IMOCA 60. With a hot-shot management team that includes the likes of Bruce Schwab, Brian Caldwell and the Quantum Sails Pacific team, Ronnie is poised to join the very small ranks of Americans to sail in the epic event.

“I very well could be the last boat in, but that’ll just give my sponsor plenty of visibility,” he laughed. But he quickly grew serious. “I’ve been very touched by the positive impact our clinics have made on the lives of several wounded veterans. The real goal is to show these vets that they can overcome their newfound challenges to achieve anything they want and lead a meaningful post-injury life.”

Ronnie will be talking about his goals and experiences at the St. Francis YC’s Yachting Luncheon on May 8. The event is open to members of all PICYA yacht clubs and costs about $25. Read more about his campaign at www.ronniesimpsonracing.com or email him at ronnie@ronniesimpsonracing.com.

blue at fault, camelot exonerated

There was a collision between the J/160 Blue and the Hunter 54 Camelot at the start of the second race of the Banderas Bay Regatta for cruisers on March 22. The incident is significant because Mike Danielson — sailmaker, Blue’s tactician and the regatta’s safety officer — fell between the boats and suffered two broken legs. We can’t recall a more serious personal injury as the result of a yacht racing collision, let alone one in a ‘cruiser regatta’.

Anyone interested in reading the Protest Committee’s report can find it in the April 1 Lectronic. Their conclusion was that "Blue, the windward boat, failed to keep clear," while "Camelot acted to avoid contact when it became clear that Blue was not keeping clear."

Following the decision, a video of the start taken by a GoPro mounted on Blue was posted on YouTube. In addition, Danielson wrote a postscript to the incident and decision that was published on the discussion forum on Sailing Anarchy.

By the middle of April, the video had been viewed over 20,000 times, and there had been more than 500 responses to Danielson’s posting. The overwhelming number of responders agreed with the Protest Committee’s decision. In addition, several people took Danielson to task for writing that he ‘took responsibility on a number of levels’ in the first sentence, then spending the rest of the post seemingly trying to explain why others were responsible.

The future of ‘cruiser races’ on Banderas Bay is unclear. Randy Hough, the dedicated and much-liked PRO at the Vallarta YC, wrote that the fallout from the incident was the last straw for him. Some members of the Vallarta YC have called for the club to disassociate itself from the BBR for liability and other reasons. Some sailors have vowed never to sail against certain other sailors and/or boats again. Some longtime friendships have been destroyed.

Danielson, a indefatigable promoter of all types of sailing on Banderas Bay, tells us that he has learned from the incident and will continue to promote cruiser races on Banderas Bay.

We at Latitude have been hosting cruiser races — some in conjunction with Danielson — for charity for decades. Given the unfortunate incident and aftermath, we’re taking the off-season to decide whether
story

an older guy and his beloved boat. They might not have as much money or be in as good shape as some other owners and boats in the area, but they have each other. Alas, when one passes on, we fear the other will soon follow.

The other thing we like about the photo is the gentle afternoon light, which softened the greens and yellows. Experienced photographers will tell you that most beautiful scenic photos are taken before 9 a.m. and after 4 p.m., as the light during the middle of the day is too harsh. Those photographers know what they are talking about.

For more photos on Simpson Bay Lagoon, see this month’s Changes.

lessons for beer can races

With the Beer Can racing season having already started in parts of San Francisco Bay and elsewhere in California, we encourage all participants to take a few lessons from the incident in Mexico.

First, what is the risk/reward of ‘pushing it’ or ‘cutting it close’ in a casual race? Losing a few boat lengths is nothing compared to a collision or somebody’s getting injured.

Second, we believe beer can racing priorities should be viewed in this order: 1) Crew safety; 2) Boat safety; 3) Having fun; 4) Sailing well; 5) Winning.

— richard
A BRIEF HISTORY OF

E ver wonder why so many people care so much about the America’s Cup? It’s the history.

Start at the beginning, in 1851. Queen Victoria was on the British throne. The Industrial Revolution was in full swing. Victoria’s husband, Prince Albert, organized The Great Exhibition to showcase British technology, inviting all nations to come and exhibit their wares also. The Royal Yacht Squadron took up the “all nations” theme, offering the £100 Cup as the prize for a race open to yachts belonging to the “clubs of all nations.” A syndicate from the New York Yacht Club won the £100 Cup with their fast schooner America. The trophy became known as The Great Mug, which now resides in San Francisco, is the oldest trophy in sport.

America was built to make money, as the NYYC syndicate hoped to win wagers on match races with British yachts. Unfortunately, as approaching Cowes, she was met by Laverock — one of the newest and fastest English yachts. They wound up in an informal speed test, which America dominated. Word quickly got out in England: “Do not bet with these guys!” The American syndicate’s leader, John Cox Stevens, proposed stakes up to £10,000 — a staggering sum at the time. The British press scolded local yachtmen for not taking up the challenge. Ultimately, however, the £100 Cup became the biggest prize the New Yorkers would take home after they defeated the English fleet in the race around the Isle of Wight. They did manage to recover some money, however, when they unemotionally sold America in England.

America won on superior technology. Her lines were based on the fast pilot boats of New York. In that line of work speed meant money: the first pilot boat out to an incoming clipper got to put her pilot on board; everyone else sailed home empty-handed. Like the pilot boats of the time, America had sharply raked masts, tightly woven Egyptian cotton sails, and a hull that was narrow at the bow and wider aft. British yachts of the day were the opposite, with a “cod’s head and mackerel’s tail” — broad in the bow and tapering to the stern. After America’s dominating victory, one British yachtsman said it made him realize he’d been sailing his boat backward all those years.

With five syndicate members and only one trophy, a suggestion was made to melt the trophy and make a medallion for each member of the syndicate. Fortunately, the owners decided it would be better to give the Cup to their club, as a perpetual challenge trophy between countries, and thus the America’s Cup competition was born. And so were the legal battles. Against the wishes of their commodore, the NYYC membership voted to defend the first challenge by sailing their entire fleet against a lone British yacht, even though the Deed of Gift specified a “match.” James Ashbury, the owner of the British yacht, complained of the unfair treatment, brought his lawyer with him for the second challenge a year later, and got the New Yorkers to agree to a boat-on-boat match.

This time the New Yorkers insisted on choosing the defender yacht on the day of each race — choosing a good light-air boat or heavy-air boat depending on conditions. Ashbury stormed home empty-handed, accusing the New York club of engaging in “unfair and unsportsmanlike proceedings.” The club responded by returning a number of trophies he had donated in the previous year. It’s ironic to note that the Deed of Gift stated that the £100 cup was donated for “friendly competition between foreign countries.”

The New York Yacht Club held the Cup for 132 years — until 1983, when Australia II, with her winged keel, took the Cup to Australia. The 1983 America’s Cup — now 30 years ago — included spying and bitter legal and PR battles over whether the winged keel broke the 12 meter class rules, and whether it was designed by Australian Ben Lexcen or Dutch designer Peter van Oossanen.

Like many readers, I first heard of the America’s Cup during the 12 meter days, in Newport. That period seems like the ‘traditional’ America’s Cup, but really it is not. There was no AC Match between 1937 and 1958. The Deed of Gift had to be modified to allow the ‘little’ 12 meters to be used, as they were smaller than the minimum waterline length specified in the original deed.

The NYYC came up with Interpretive Resolutions — new rules that had not been in the Deed of Gift, like nationality requirements for the crew. The nationality requirement in the Deed of Gift deals with the challenging yacht club and the country of construction of the yacht, not the crew. On board America in 1851 was a British pilot who helped with crucial local knowledge of the waters around the Isle of Wight. Reliance, the American defender in 1903, had a Scottish helmsman named Charlie Barr. Five Americans as afterguard, and 66 Scandinavian fishermen.
In the years between the first challenge and *Australia II*’s victory, there were stormy incidents, including accusations in 1893 from Lord Dunraven of cheating by the Americans. But there were also periods of good sportsmanship, including the five unsuccessful attempts by Sir Thomas Lipton “to lift the auld mug.” Even good sport Lipton gave the New Yorkers fits, though.

Faced with needing to fund and build yet another defender for Lipton’s third challenge and wanting to scare off the pesky Irishman, the NYYC responded with *Reliance*, the largest yacht ever to sail in the America’s Cup. With a maximum allowed waterline length of 90 feet, *Reliance* was 202 feet overall, from bowsprit to the end of her overhanging boom. Her mainsheet was 1,000 feet long and four inches in diameter in the middle, and needed to be wound on drums below deck when sheeted in.

*Reliance* had a fin keel with a bulb that weighed 102 tons. Designer Nat Herreshoff used the latest high-tech materials, like Tobin bronze for the hull. The topmast telescoped down into the steel mast when a topsail was not set. Herreshoff replaced hoops for the mainsail with mast tracks, and he invented two-speed winches. He made *Reliance*’s rudder hollow so water could be let in or pumped out to change the feel of the helm in varying conditions. The America’s Cup has always been a technology battle.

*Reliance* was described in the press as dangerous, a freak and a menace to the crew, having nothing to do with normal yachting. Does that sound like some of the comments about the AC72s? Even Herreshoff agreed that *Reliance* was extreme. In his America’s Cup career he designed and built the winning yacht for six successful defenses, and he even helmed one, *Vigilant*, in 1893. Herreshoff’s yard built two more defenders in the 1930s, after he stopped designing: the J Class yachts *Enterprise* and *Rainbow*. Will anyone ever surpass his America’s Cup record? I think not.

W
What would Captain Nat think of the 2013 America’s Cup in San Francisco? He would love it. Believe it or not, while still the age of our current Facebook generation, Herreshoff designed and built the first racing catamaran, *Am-
A BRIEF HISTORY OF THE AULD MUG

Of course, the 1988 Defense was won by the catamaran Stars and Stripes over the New Zealand “Big Boat” in the “Coma Off Point Loma” — a completely lopsided regatta followed by two years in the New York courts to decide who would keep the Cup. Twenty years later, we were back to multihulls and the America’s Cup spent another two years in court before Golden Gate Yacht Club’s challenger, BMW Oracle Racing’s wing-sailed trimaran USA 17 defeated Switzerland’s defender, the catamaran Alinghi 5, off Valencia, Spain in 2010.

There will be five AC72 cats training and racing on the Bay this summer – two from Oracle Team USA, and one each from challengers Artemis Racing of Sweden, Luna Rossa from Italy and Emirates Team New Zealand. Artemis and New Zealand will each have two boats but will only sail one, keeping the other as a spare, and hoping they don’t need it, since the second (later built) boats should be much faster than the first. Luna Rossa will only build one boat and hope they can develop it continuously to match the others’ firepower.

The tradition of the America’s Cup as a technology battle has never been more intensely showcased.

In the 30 years since Australia took the cup from the NYYC, there have been many changes. Only four countries have now held the Cup: USA, Australia, New Zealand and Switzerland. We have gone from 12-meter yachts to the Big Boat-vs-catamaran match in 1988. Then the relatively friendly period of the International America’s Cup Class (IACC) from 1992 to 2007. That period ended with one of the best America’s Cups ever when Switzerland’s Alinghi defended in 2007 against 11 challengers from 9 countries in Valencia.

Unfortunately, that episode was followed by one of the most painful periods in America’s Cup history, with the legal battle leading up to Golden Gate YC’s win by Larry Ellison’s monster trimaran. One thing is for sure about the next chapter of AC history: the sight of hydrofoiling wing-sailed cats on San Francisco Bay this summer will be spectacular!

If you wanted to participate in three of arguably the best, most popular and diverse sailing events in the Caribbean, you only needed to be at the French island of St. Barth between March 28 and May 5. Although the island is only eight square miles and has a population of fewer than 10,000, it’s becoming an ever-more-powerful magnet for great boats, sailors and sailing events. That’s because it has the great Caribbean sailing conditions, it’s stylish in a chic French way, and the events have the enthusiastic support of the locals and the government. It doesn’t hurt that St. Barth is the cleanest and safest island in the Caribbean.

In the 1970s, St. Barth was among the poorer and less-visited islands in the Eastern Caribbean. Then came the photographers, supermodels and rock ‘n rollers to join the free-spirited pot smugglers. The island has prospered dramatically since then. While the island culture has necessarily suffered as a result of the hedge fund managers and Russian oligarchs replacing the pot smugglers, St. Barth has somehow managed to hang onto most of its soul. While not quite as magical as it was 25 years ago, the island is still free of big hotels, fast food joints and other concessions to mass tourism. And it still has special moments. One evening we walked by the Anglican Church and heard the voices of the choir sending Pink Floyd’s Another Brick in the Wall off with the trades.

St. Barth’s signature event is the Bucket, held for the 18th time this year. When it comes to sailing spectacles, we think it’s the greatest in the world. It would be hard for it not to be, as the concept is to invite 40 of the world’s biggest sailboats — surely over 100 feet — to compete in three days of friendly racing.

The year’s Bucket was terrific, with 31 boats in four classes, headlined by the 289-ft Maltese Falcon, now owned by Cypriot hedge fund manager Elena Ambrosiadou. In addition, there were five J Class yachts, the largest gathering of these 135-ft monster racing machines since World War II.

In order to avoid multimillion-dollar smashups, each Bucket boat has a Safety Officer, boats are prohibited from coming within 140 feet of each other, and the races — except for the J Class — use pursuit starts. Safety considerations now keep the boats farther apart than in the past so it’s not quite the spectacle it once was, but there’s still nothing else like it.

This year’s Bucket featured every-

thing from light winds and bright sunshine to 28 knots and pouring rain. No matter the weather, spectators had many opportunities to get up close to the huge yachts as they glided by. It’s hard to appreciate the majesty of a 180-footer at speed until you can nearly reach out and touch one.

Even watching the crews at the dock was entertaining. After most races there were riggers dangling from 150-ft masts for long periods of time, and it took 25 people to pack the chutes. Putting the boats to bed after each race is a major project that requires private navies.

How much does it cost to race in the Bucket? Too much, if you have to ask. The owner of one 150-footer reportedly spent $30,000 on logo wear alone, rented six villas for the crew at about $15,000 each, picked up the tab for $10,000 dinners, and naturally had to pay a bundle for airfares. Racing the more competitive of these giant boats around the courses safely requires top-flight sailors, at least in the skilled positions, and they have to be flown in from the distant sailing centers of the world.

While winning is supposed to be a secondary consideration, more than half of the Bucket boats sailed competitively. This year’s overall winner was the 181-ft schooner Adela, launched 110 years ago. She was skippered by Shag Morton, the antithesis of today’s clean cut, corporate helmsmen. Although Shag has been partially mellowed by marriage and fatherhood, he was one of the original unkempt wild sailors of the Caribbean. Dennis Conner, who used to drive Adela in the ‘90s, was along to critique the crew work and maybe hit a starting line.

The other great schooner in the event was the gorgeous dark-hulled 203-ft Hoek-designed Athos, which had to drop out of the final race because of a crew injury. When a big wave hit Athos, a pile of sails was knocked over, one of them onto the leg of a strapping young crewmember. Racing sails for 200-footers are huge and weigh a figurative ton, so there went the ligaments in his knee.

If the Bucket is for billionaires, the Voiles de St. Barth, now in its fourth year and the island’s up and coming event, is for everyone. Sure, there were some big boats among the 65 entries. The Swan 100 Varsovie, run by Mill Valley’s Patrick Adams, was the biggest until she was knocked out of the first race by a broken headstay. That left the door open for another woman who likes big boats, Vicky
The sailors were good and the racing was often close.

Schmidt, to take the maxi division with her Swan 80 Serene.

There were some no-expense-spared all-out race boats, too, such as the class-winning TP Vesper, managed by Ken Keefe of KKMI in Sausalito. She was first to every mark of every race. But the Voiles was also home to some hardcore small boat sailors, including the crews of six Melges 24s who braved the open ocean conditions.

Lucky Poupon, a vet of three races around Cape Horn and many transoceanic events, is not one to give small boats and non-spinnaker entries easy courses. On the last of four races, for example, he sent the Melges and non-spinnaker classes on a 25-miler — which meant they sailed close to 35 miles before it was all over — into the Atlantic, where the trades were gusting to 25 knots and the seas to six feet. Not that there were many complaints, as the Voiles competitors are a hardy bunch.

Thanks to the 120 volunteers, the Voiles does a fantastic job of organization and taking care of owners and crews. Each boat, for instance, is given a concierge. Crew are given their own wild and crazy nighttime beach party in addition to the nightly dock parties with live bands at the quay. And as each boat crosses the finish line, she is given two bottles of icy Champagne. The French know how to put on a race, and they wrote the book on joie de vivre.

Another great thing about the Voiles is that there seemed to be lots of crew positions open on fun boats. For example, more than a few crew made their racing debuts on either of two Volvo 60s, Cuba Libre or Ambersail.

The last event of the St. Barth season is the West Indies Regatta, which is going to be about as different from the Bucket as could be. The idea of the regatta is to celebrate the Caribbean’s work boat heritage. Back in the day, neither the fishing boats nor the cargo carriers had engines, and making those basic and sluggish boats go in challenging conditions took extraordinary skill and patience.

St. Barth has really gotten behind the West Indies Regatta this year, and 14 boats are expected, each hopefully bringing goods from their respective islands in order to recreate an old-time market on the quay.

Typically the boats that participate in the West Indies Regatta are rough and in need of much deferred maintenance. And their owners and crew are usually light on funds. But based on their visit last year, they’ve got more sailing soul than most of the owners of boats in the Bucket. We’re proud of St. Barth for recognizing the importance of the Caribbean’s sailing heritage, even if there’s no money in it.

If you’re a sailor who likes the tropics and variety in sailing events, you might keep the St. Barth trilogy in mind, as even the calms between the storm of events are a pleasure.

April offered boaters a great opportunity for serious outdoor boat work for the entire month. Gorgeous weather and mellow temps drew many to the yard, though every last one would rather have been sailing — or at Strictly Sail, which was running as we made our way around to Bay Area boatyards with our trusty Nikon for our annual Boatyard Tour.

As always, we met wildly different sailors. Some of them were content to sail on the Bay, while others were planning circumnavigations. Everyone was doing a bottom job, of course, but some were in the final — and not-so-final — stages of extraordinarily long refits. We talked to a Ph.D., a cosmetologist, an architect, a boatwright, a business owner and a few things in between.

That’s the thing about sailing and sailboats. It doesn’t matter how many letters you have behind your name or how fat your bank account is, we’re all trying to harness the same breeze and current to take us wherever they will. And you can’t put a price on that!

— latitude/ladonna

Angelique, Columbia 57 — “You think watching grass grow is boring, try watching epoxy dry,” laughs Andy Kurtz as he waits for some five-minute epoxy to cure, posed like the little boy holding his finger in the leaking dike. But if Andy’s refit of Angelique proves anything, it’s that he’s a patient man.

“I bought her in Florida seven years ago and moved her to my home in Hawaii,” he says. He chartered the boat there for about a year before moving back to the Bay Area, where he’d grown up and run his own boatwright business. Now working for the family plastic injection molding business, he’s spent the last six years working on the boat.

“I knew I needed to replace the teak decks,” he recalls, “but when I started the project, I realized I had termites. I ended up replacing 80% of the deck.”

Of course removing the decks meant the joiner work belowdeck would be ruined so he gutted the boat and started from scratch. “It’s an old hull with new everything else.”

And when he says everything, he means it. New engine, new plumbing, new electrical system, new interior, new carbon strut. Angelique even has new topsides. “There were millions of crazing cracks so, during this haulout, I ground it all down, glassed, faired and primed,” says Andy. “I’ve only been out six months!”

Andy says he hopes to be back in the water soon, but it’ll be another year before he’s done restoring Angelique. “Then I’ll be out chartering her on the Bay, and getting ready to sail her around the world.”
DOIN' IT DIY-STYLE

Rapture. Caliber 40 LRC — Boat partnerships often fail because one partner isn't interested in doing the maintenance required to keep a boat in tip-top — or even sailable — condition. So when a longtime owner of a boat is approached by someone wanting to join forces, he might wonder about the wannabe partner's dedication. Not so with Mike Warner and Greg Newman.

Immediately after buying Rapture new in 2004, Mike put her in charter at Club Nautique. Greg was one of the untold number of people who learned to sail aboard Rapture. "I got my offshore sailing certification on this boat," he notes, "so I know how she behaves in heavy weather offshore."

When Greg and his wife Susan started talking about going cruising one day, they knew they would need to be as self-sufficient as possible, which meant learning about more than just sail trim. A mutual friend introduced the couple to Mike and his wife Laurie, and the Newmans made an offer the Warners couldn't refuse: They would become full boat partners on the condition that the Newmans be allowed to work on every system on the boat and be involved with every aspect of maintenance.

"We've done all the fresh and sea water hoses, impellers, pumps and so on," says Mike, a retired engineering executive.

"The learning curve has been hyperbolic," laughs Greg, who spends his days as the head of the Geophysics Department at Lawrence Berkeley Labs. "But it would be foolish to take off for Mexico and the Marquesas without knowing boats and boat systems."

Rapture had been hauled for just five days and was ready to splash when we met Mike and Greg. In that time, they'd managed to complete a bottom job, serviced the thru-hulls, and installed a new prop shaft and Autostream feathering prop. And they did all the work — with the exception of cutting the shaft — themselves. Now that's teamwork!

Kittiwake. Bird Boat #9 — When a wooden boat owner is nearing the end of a long haulout, he doesn't have a lot of spare time for visiting. "The challenge is keeping people away who just want to chat," says Rob Fenner, an architect who's owned Kittiwake for 23 years — ever since he moved to San Francisco Bay from Michigan.

When we distracted him, he'd been hauled for five weeks and was firmly in crunch time. "We're jamming." During her time on the hard, Kittiwake underwent more than her normal yearly bottom job. Not only had Rob reefed out miles of original caulking, but he pulled every square iron nail that held the Bay classic together and replaced them with bronze screws.

The caulking itself was primarily handled by Rick Mercer. "Rick is a seasoned caulker, and is actually restoring another Bird Boat — Puffin — in Larkspur," says Rob. He went on to note that two other Birds are being restored in the Area, soon to join the fleet: Teal and Bobolink.

As any wooden boat enthusiast knows, keeping a woodie out of the water for so long can cause her to dry out (that's bad). To combat this, Rob carefully timed his haulout to coincide with cool, damp — but not soaking — weather, and sprayed the boat down with fresh water seven times a day! "But now the tarp is up and it's go time," he notes. "No time for water. Just get it done."

And if anyone wants to chat for too long, Rob invites them join in the fun. "Caulking school starts at 6 p.m. — come back then!"
Benevento. Pacific Seacraft 40 Voyagemaker — What’s wrong with this picture: A man kicked back in a lawn chair enjoying a cold brew while his wife is suited up like one of the bad guys from E.T. and rolling bottom paint like crazy. Ask Darold Massaro and he might say, “Sounds about right to me!” His wife Jennifer might disagree. “You caught us at the end of a very long to-do list,” he says. “We’re leaving here October 2 for a two-year trip and, with the exception of new standing rigging, she’s ready to go.”

They’d been living aboard in Half Moon Bay until it was time to haul out, when they brought her north to the Bay. “I really believe boats are alive,” says Daniel, “and we rescued her. She’ll take care of us. On the way up, we went over a 14-ft wave with such grace and smoothness. She’s a great sea boat.”

They were hoping to be back in the water within a week of our meeting, but had a ways to go. They’d already replaced the prop shaft and some thru-hulls — they also got rid of a few along the way — installed a grey-water tank, and rechromed the portlight frames. “Now we’re stripping off 11 layers of bottom paint as well as varnishing.” Daniel notes.

Once in the water, the couple plan to head south to Southern California to be closer to their grandkids and possibly start up a charter business with the boat. “Life is once and they’ll be grown and gone before you know it.” says Daniel. “The only way you get to do it is to go there.”

Benevento. Pacific Seacraft 40 Voyagemaker — We can’t remember ever meeting anyone working on their boat who was as dolled up as Laura Jensen. “I’m a cosmetologist and my makeup has sunscreen in it,” she explains. “I have to use that anyway, so once that’s on, I might as well finish!”

Laura and her partner Daniel Perkins, a musician and mechanic, bought their beloved Cheoy Lee 41 Sail On Salon nearly three years ago and have been steadily upgrading her ever since. “We replaced all her interior wood, went through all her systems, rewired and turned her into our home,” Laura says.

old — a greater percentage of his life than his dad, who grew up sailing on the East Coast — Dante is an old hand at stuff like navigating with a sextant, taking bearings, doing the dishes, handing Dad tools and, his favorite boat job, fishing. "I've caught, like, 30 fish in my life. No! Probably even 50!"

As the co-owner of a social media company, Darold plans to work along the way with the help of onboard satellite — "It's pricey!" — while Jennifer is taking a two-year leave of absence from her communications job. But don't worry; Dante's comic company, The Funny Pages, will continue to thrive as long as he continues to draw.

"Kids are interested in learning when they don't know they're learning," says Jennifer of Dante's education in the business world. "We found a great company that works with us to design a program to suit him."

During their haulout, the Massaros did a bottom job, as well as changing the PSS shaft seal and MaxProp. "We learned about galvanic corrosion when we had our boat berthed in Santa Cruz," Darold says. "We had to have the MaxProp repaired and are putting it back on. At least we have a spare prop!"

As for Darold's job 'supervising' Jennifer's painting, we never did get a straight answer, but it was easy to see that this entire family is working as a team toward a common goal. We can't wait to hear from them — especially Dante, we must admit — during their trip.

— DOIN' IT DIY-STYLE

**Now & Zen.** Newport 30 Mk II — As a lifelong Bay sailor, and a longtime solo racer, it's little wonder that Tony Bourque (center) has thought a lot about doing the Singlehanded Sailing Society's premier event: the Singlehanded TransPac. It doesn't help that he often crews for Jim Quanci, overall winner of last summer's running of the event aboard his Cal 40 Green Buffalo, and a multi-year Pacific Cup vet.

"We both work at AutoDesk," says Tony, "and he almost has me convinced that, instead of prepping Now & Zen for the race, I should buy a Moore 24 and just sell her when I get there."

While he might get there faster on a Moore, it would be a shame for Tony to live in such discomfort when he's put so much work into Now & Zen. "For this haulout, we're doing a bottom job and having some prop work done," he notes. "But last summer she got a new rig." (We couldn't help noticing the reflective vinyl he'd applied near the masthead, a trick he learned in the pages of *Latitude*.)

Tony had the help of friend Jaimie Jensen and crewmember Daren Heldstab during his haulout. Nowhere to be seen were his other occasional crewmembers; two daughters and his mom. "They'll normally go up to the Delta with me every summer," he says. "But this year my 15-year-old made it perfectly clear that she's not going."

The next item on Tony's list is a new suit of sails. "Mine are really old," he says. Sounds like a trip to Hawaii and back would be the perfect way to break them in!
BOATYARD TOUR

BOTTOM JOB TIPS FOR DIY-ERS

If you're a glutton for punishment — or just want to save a few bucks — painting the bottom of your own boat isn't a complicated process. It’s difficult, but not complicated. Here are a few things to keep in mind:

- Call around to various yards for rates and to make sure they allow DIY-ers.
- Before hauling out, be sure you know what's included in the price quoted by the boatyard. Most include pressure washing, which is a must before starting your bottom job.
- Most yards require that you tarp under your boat to capture particulate. Some supply the tarps, some don’t.
- While the hull is drying, you can check for any previously unknown issues. Any cracks in the rudder? Does your hull-to-keel joint have a ‘smile’? Are your thru-hulls in good shape? Any blisters that need repairing? Unless you like the smell of curing epoxy, save yourself some trouble by focusing on blisters larger than the size of a quarter.
- If your bottom has eleventy-one old coats of heavy bottom paint, you should consider stripping it all down to the gelcoat. Think about how heavy one can of copper-based bottom paint is. Now multiply that by however many gallons your boat takes times the number of bottom jobs she’s had. That’s a lot of weight!
- If you do decide to strip, check with the yard about their policies on using chemical strippers vs. hiring it out to someone with a machine.
- Before you start sanding, head down to your local chandlery and pick up the following items: Two Tyvek suits per person (at least); a box of latex or nitrile gloves, or a pair of heavy-duty rubber gloves (these will last longer but are clumsy to work in); one respirator per person; eye protection; ear plugs; paint rollers and trays; 1” blue masking tape; cheap chip brushes; a gallon of acetone; blue paper towels; bottom paint. The amount of paint depends on the size of your boat and type of paint, so read the manufacturer’s recommendations. Also pick up a can of whatever clean-up solvent they recommend.
- Most yards require that your orbital sander (preferred) be connected to a vacuum. Some want you to rent their equipment, others not. Regardless, make sure you have spare filters for your vacuum because you will clog it.
- If you’re not stripping the paint, suit up. You'll have sore muscles regardless, but they’ll be sore muscles . . . oh, who are we kidding? You’ll have sore muscles regardless, but they’ll be less sore. Buy the roughest sandpaper you can find (60 grit, typically), and get to work. Sand until you have a smooth, solid surface.
- Assuming you’re not doing any other work, use the blue paper towels to wipe the hull down with acetone. Most yards won’t want you washing your bottom paint dust down the drain, plus the acetone will remove any oils. Tape off the waterline with the blue tape, being careful to get as clean a line as possible.
- Have the yard shake your paint, or use a special paint mixer on the end of a drill to mix the heavy sediment into the paint.
- Roll on the paint. Use brushes to get hard-to-reach spots. By the time you make it around once, you’re ready for a second coat. Apply one last ‘hot lap’ around the waterline. Be sure to save a small amount of paint.
- Either have the yard move the jack stands or, when the boat is in the slings, use the last of your paint to coat those bare spots and the bottom of the keel.
- You’re done! Now hie over to the nearest pub and lift a cold one — if you can — to all your crew’s hard work.

(510) 234-4400
Just under 200 boats registered for our loosely structured Pacific Puddle Jump rally this year. That tally makes this annual migration from the West Coast of the Americas to French Polynesia one of the largest cruising rallies in the world. It’s also one of the most internationally diverse — especially the contingent who are now jumping off from Panama.

Although often referred to as The Ditch, we think of the Panama Canal as ‘The Great Funnel’ because it is the conduit through which westbound boats from all over the world must pass in order to enter the Pacific — unless, of course, they want to make the 9,000 mile diversion around South America.

At our PPJ Send-off Party in March at Panama’s Balboa YC, we met sailors from the U.S., Canada, Europe, South Africa, Australia, New Zealand and elsewhere, all eagerly anticipating making sunny, palm-fringed landfalls in the fabled isles of Polynesia.

We’ll introduce you to them here, and hopefully some will share tales of their South Pacific adventures with us in future editions of Latitude.

**Kaijasong — Beneteau 50**
Gary & Kaija Leno, Vancouver, BC
Cruiser quiz: How do you get a reluctant partner to go cruising with you?

Kaija and Gary of ‘Kaijasong’ are a bit behind schedule, but what do they care?

"We set a 10-year goal to go again and 12 years later we made it."

Name the boat after her or him. This tactic isn’t guaranteed to work every time, but it was successful for Gary. Not only that, he made this 50-footer a Christmas present to Kaija. "How could I say no?" she asks with a broad smile.

Their long-term cruising dreams were born in 1992 when they did an ARC Rally across the Atlantic. Although they’re from BC, they bought this boat on the East Coast in 2003. "We said we’d give it 10 years or until the fun stops. But it took us the first eight years just to get through the Caribbean. So if it’s another 10 years that’s fine with us." One thing you can bet on is that cruising plans always evolve.

**Shellback — Custom Schooner**
Gerrit & Sue Drent, Long Beach
Gerrit and Sue took the old-fashioned approach to fulfilling their cruising dreams: They built their own boat. And not just any boat. Shellback is a 65-ft Bill Crealock-designed schooner built of steel. Gerrit claims his earliest inspiration to sail the South Seas was watching the 1950s TV show Adventures in Paradise, so this trip has been a very long time coming. "We’ve sold everything but the boat," explains Sue, "so we’re just going to take our time and enjoy it."

**Full Monty — Privilege 48**
Will & Jenny Lang
Topsail Beach, NC
We’re not sure how the boat name Full Monty relates to this family of sailors — it was famously used in a hilarious British comedy film to describe the strip-teasing antics of a bunch of unemployed steel workers. Captain Will, his wife Jenny, daughter Justine, 12, and son Colin, 10, all seem to have a healthy sense of humor, so perhaps that’s the connection.

In any case, this happy crew seems thrilled to be heading west this season, as departure to the islands has been a longtime dream. "I was a cruising kid myself," explains Jenny. "Will and I started cruising before kids, 14 years ago. We thought we were going west then, but plans change and things happen." Things like having two kids. "So we set a 10-year goal to go again and 12 years later we made it."

So far the kids seem to be having a ball. "I’ve loved all the things we’ve seen."

**Voyageur — Morgan 461**
The Bauza family, Berlin, DEU
Michael, who hails from Germany, and his Trinidadian wife Maina think of their boat as a floating classroom, as they are educating their 14-year-old son
tor in St. Thomas. Goes to show, you never know what opportunities might come your way when you get away from the mainstream.

Although John was born and raised in the South Pacific, he’s not yet seen French Polynesia — as it lies 2,000 miles to windward.

Sheer Tenacity — Shearwater 39
Rod & Mary Turner-Smith
Cape Town, ZAF

Rod built this Dudley Dix-designed sloop in the couple’s garden over a three-year period, while Mary wound down the family business. Despite the years of preparation, though, Mary wasn’t totally sure such an adventure was for her. “She said she’d bail out at St. Helena Island if she didn’t like it,” recalls Rod. “But we’ve done 10,000 miles since then, so I guess she’s okay with it.”

The highlight so far was spending nine months in Brazil, which they loved. After that they spent a couple of years in the Caribbean before transiting the Canal.
"Life is not a dress rehearsal."

"On our first date she said, 'Where would you like to sail to next?' I said the South Pacific. She had the same idea, so we hatched a plan together."

He's a lucky guy, as Barbara seems to be an ideal traveling partner: 'I've always loved sailing — I'm very passionate about it. I love visiting other cultures and learning about their traditions, and I love the journeys.'

As they were about to head out across the open ocean, Lionel shared one of his favorite bits of advice that relates to cruising dreams. "A fellow at Downwind Marine (in San Diego) said, 'Life is not a dress rehearsal'. So here we are."

Gallivant of Lymington — Gallant 53
The Elgar family, London, GBR

Adam and Tamlin's kids probably don't remember a thing about it, but they did a stint of cruising when son Jack was only two and daughter Katinka was only two months old. "It was fun," recalls Tamlin, "but mostly it was a lot of hard work." Now that Jack is 10 and Katinka is 8, things are different — everyone is having a fine time. "This time it's been a wonderful experience with the kids," says Adam, who is British.

They bought this boat 13 years ago in South Africa, where Tamlin was born and raised. We learned that her dad is one of the weather gurus there who advise cruisers about the best weather windows for sneaking around the Cape of Good Hope with its tricky Agulhas Current. Before this family has to worry about navigating those waters again, though, many adventures await them on their way around the planet.

Saliander — Tayana 55
Peter & Raewyn, Auckland, NZL

The Saliander crew proves there's more than one approach to South Pacific cruising. After a stint in French Polynesia, this Kiwi couple plans to reach up to Hawaii, then continue north to Alaska. The start of their cruise was different from the norm also, as they bought this boat in Greece and started heading west — slowly — from there. "Here we are five years in and only a third of the way to New Zealand." But what's the rush, right?

In addition to visiting Caribbean islands, they spent a couple of seasons cruising the East Coast of the U.S. and loved it.

Tempest — Amel Mango 53
Bob & Annette Pace, Baton Rouge, LA

"Growing up in Colorado I dreamed about blue water sailing," recalls Bob, "but I had never actually set foot on a sailboat until I was 45." Annette, however, had three sailboats before this and a whole lot of powerboats.

They'd been friends for 10 years, when one day at work they both found they were having a bad day. Bob said, "Wouldn't you just like to get on a boat and sail away?" Annette replied, "Well I've got the boat!" Turned out she'd been left with this boat in a recent divorce and was looking for someone to sail with. You never know where casual conversations around the watercooler might lead you. They've been out for six years now, and are apparently ready to take their adventuring up a notch.

Giggles — Hallberg-Rassy 42
Ben Kooiman & Anya Drok, NLD

In 2009, Ben left Holland for the Caribbean. When he got to the Dutch island of Curacao in 2011, he met the ideal cruising partner, Anya. Like Ben, she's had a longtime dream of sailing to Tahiti. So the couple is now heading west with no particular timetable. "Someday," they expect to return to Curacao.

Nirvana — Irwin 37
Marcus & Wendy Blackburn
St. John, USVI

"In 2006 we decided we wanted to take off on a sailboat," explains Marcus. "although we didn't have one and I didn't even know how to sail! But we bought one, fixed it up and took off. We never dreamed at the time of sailing around the world, but we did pretty well in our first year and liked it."

After a stint exploring the Eastern Caribbean, the couple settled in St. John, USVI, in order to replenish their cruising kitty. While they were there, their South Pacific fantasies were nurtured after meeting...
Tom and Amy Larson of Sadie Sea, who were just completing a circumnavigation, and humorist Fatty Goodlander and his wife Carolyn, who'd just completed their second lap!

Eric Anaclerio will be along as crew.

**MacPelican — Whitby 42**

**The Lambert-Ryan family**

**Southport, AUS**

You guessed it, this boat’s name was taken from one of nine-year-old Finn’s storybooks. Since buying the sloop in Guatemala 15 months ago, this Aussie family has had a lot of fun aboard her while exploring the coast of the Western Caribbean.

"But now it’s time to start heading home to Southport, on an island (with a great surf break) south of the Great Barrier Reef. As you may have heard, the Australian economy avoided the meltdown that the U.S. and Europe have suffered, so the Aussie dollar stretches a long way when shopping for boats in the U.S., Caribbean and Europe.

**Elcie — 62-ft Custom Cat**

**The Johnson Family, Oxford, MD**

We found it interesting that this family’s that’s based in a pre-American Revolution town with houses that date back to the 1600s has one of the most cutting-edge boats in the fleet. She’s an aluminum cat custom-built in New Zealand to a David Devilliers design.

As Cap’n Richard explained, the family lived in the land of the Kiwi while the cat was being built, but when their visas ran out they had to sail Elcie home — unfinished — to Oxford. “You mean, around the world?” we asked. No, they took her east through the roaring 40s of the Southern Ocean to Easter Island (4,500 miles), then east to Panama, upwind across the Caribbean, and home to the Chesapeake. Amazingly, neither Jessica (mom), nor her daughters Emma, nor her daughter Sadie Sea (12, or Molly, 10, jumped ship along the way. After two years of finishing Elcie in Oxford, they’re off again. “She’s a working boat,” explains Richard, meaning they take up to six additional (paying) crew on passages.

**Pelagie — Lagoon 38 cat**

**Nils Honhoff & Hanna Klaver**

**Oostmahorn, NLD**

“I always wanted to sail the world as a child,” recalls Hanna, “but there was school, university, jobs... But then when you’re in your 40s and 50s, and you’ve had a good life, you ask yourself, ‘What else do I want to do with my life?’ At first I thought a sailing trip like this was not possible, but then my husband said, ‘Oh, I think I’d like that lifestyle too!’” So they started taking courses, sailing on bigger and bigger boats and, as Nils says, “Here we are!”

Plan A is to circumnavigate — unless the pull of their grandchildren becomes too strong.

**Westwind — Yankee clipper 49**

**Randal & Carol Barnhart, Juneau, AK**

This salty Alaskan crew has had some amazing adventures since setting sail from Valdez 15 years ago. Now, having circled the globe via the Cape of Good Hope and the Panama Canal, they plan to head back to the northern latitudes of Alaska where they’ll cross their out-bound track, with a pit stop at Clipperton Island along the way. That said, these are hardcore cruisers so their plans are always subject to change. “Actually, we haven’t ruled out another visit to the Marquesas along the way,” admits Carol.

**Good News — Pearson 37**

**Lonnie Rupert & Bona Gordovez**

**Lima, Ohio**

Although Lonnie is from the Midwest, he says he’s been dreaming of South Pacific cruising for a couple of decades. He learned to sail in the Great Lakes 25 years ago. But for his girlfriend Bona, the sailing life is still pretty novel. After meeting three years ago, they hatched a plan to sail to her home country, the Philippines, then bought this boat in Mexico in 2011. “It’s a new challenge for me,” she says, “but I’m loving it.” No doubt that’s ‘good news’ to Lonnie.

**Vindicator — Custom 60-ft Woodie**

**Brian Milgate & Lily Yang**

**Brisbane, AUS**

It’s not every sailor who can say nonchalantly, “Yeah, we’re heading across the Pacific to Australia, then back up to China a year from now.” But then Brian
another ocean as he is. Interestingly, Brian counts Madagascar as his favorite destination, followed by the Marquesas and Bora Bora.

Rounding out the crew are former backpackers Ben Corke and Jenny Parsons (both British) who met Brian through working on his farm. Now they’re heading back for another stint of manual labor — after a few glorious months of trade wind sailing.

**Flour Girl — Cheoy Lee Offshore 44**

*The Edwards Family, Coral Bay, USVI*

Unfortunately Cap’n David missed our shindig in Panama, but we met his wife Kim and seven-year-old son Zack. Interestingly — to us anyway — this family has been living in our old stompin’ grounds, Coral Bay, St. John, USVI.

They’re very excited about exploring the South Pacific, especially since they’ll be buddy-boating with a French-Canadian family on *Sueño*. After cruising together for the past eight months, the two families now seem almost inseparable.

Luckily, their boats travel at roughly the same speed. (Sorry, *Sueño* didn’t officially register, so we don’t know much about them, except that they seem to be very happy sailors.)
that would give me total freedom and allow me to go anywhere in the world — where the only limitation would be my interest, courage or skill." You've got to admire his attitude.

The boat's unusual name, by the way, comes from Buddhism. Kuan Yin is the "patroness of shipwrecked sailors."

Sharing the highs and lows of the crossing will be longtime friends Adam Wanczura and Edie Dittman, and Janet and Gord Macatee.

**Waka Irie — Mariner 32**

**Seatz Hof & Jen Murray, USVI**

With a name like *Waka Irie*, you might think this boat is crewed by Rastafarians. It isn’t, although its Dutch captain, Seatz, sports a pretty respectable mop of dreadlocks.

He and his Kiwi girlfriend Jen are definitely living a lifestyle that a lot of young people would love (both are 31). They met in the Canary Islands while crewing on different boats in the ARC Rally. By the time they got to St. Lucia, both were thinking about buying a boat of their own. And they both soon focused on this affordable 32-footer. So rather than getting into a bidding war, they bought it together. And the rest, as they say, is history.

During her travels so far Jen’s favorite spots have been Dominica, Colombia, Sicily and Sardinia. Looking ahead, they both agree that they’ll try to stay off the ‘cruiser milk run’. Seatz, who’s sailed the South Pacific before, says, "I think the South Pacific offers the best cruising for us. If you’re independent, self-sufficient and you don’t mind doing everything like the locals — eating like them, traveling like them — places like the Solomon Islands and Papua New Guinea are amazing!"

**Zenna — Westerly Ocean 49**

**Mark Dunn & Marion McQuarrie, London, GBR**

“We’re jumping off and jumping in with PPJ,” say Mark and Marion. They’re Brits who intend to retire in Australia after they tire of cruising. Or is that if they tire of it?

Having bought this boat in England more than three years ago, they’ve taken their time to reach Panama. So far, their favorite stops have been Grenada, the Colombian port of Santa Marta and Panama’s San Blas Islands. We’ll bet their next stop, the Galapagos, will soon be added to that list.

**Raiatea Carenage**

A Subsidiary of

The Moorings Yacht Charter, Ltd.
A Canadian crew named Matt had just joined them the day before our fiesta.

Moonbeam — Island Packet 52
Ken Bardon & Jim Drinane
Marco Island, FL

"I've crossed the Atlantic three times," says Cap'n Ken, "but I had to wait until I totally extricated myself from business to do this."

He and his first mate, Jim, aren't worried about making such a long passage together, as they are longtime friends who've been boat partners in the past. Their wives will fly out to join them for some interisland cruising. The way we understand it, the plan is to leave the boat in Tahiti for the off-season, then return and continue around the world via South Africa.

It's common to have 'small world' experiences in the sailing community, but how about this one: Adam and Tamlin of Gallivanter of Lymington (profiled earlier) used to live right next door to Jim in Brooklyn. But of course, everybody knows everybody in Brooklyn, right?

Sunny — Catana 471
Aaron Worrall & Laura Payano, AUS

Aaron bought this boat in Florida two-and-a-half years ago and began exploring the Caribbean. While in Trinidad he met — and fell in love with — lovely Laura, and eventually invited her and her adorable son Javier to join him on the trip back to Australia.

 Asked if she'd ever imagined that she'd someday sail to Tahiti, she replied, "No way at all. But it's a good adventure, so I'm very excited." Although born and raised in the islands, she'd only been sailing once before meeting Aaron. "I never expected to go to the other side of the world."

Javier seems to love the boating life so far, and we're told he has an uncanny knack for alerting his mom and Aaron when any of the boat's gear is out of place.

Chat d'O — 42-ft Manta Cat
Bill & Marta Gervan, CAN

"I've seen the world the fast way," says Bill, who is a retired Air Canada pilot. "Now it's time to see it the slow way and smell the roses as we go."

Bill’s Colombian wife Marta is a bit nervous about making such a long crossing, particularly after recently suffering through 18-hours of strong Papagayo winds and rowdy seas in the Gulf of Tehuantepec. But typically, few Puddle Jumpers experience extreme conditions for long, if at all.

After several years cruising Mexico and Central America, Marta says, "For me the best part is fishing. I love to fish! And also getting to meet new people and learn new customs."
**Millennium — Jutson 60**

*John Clayton & Nat Kamphang*

*Sydney, AUS*

We met John and Nat at last year's send-off party, but due to a few substantial setbacks — such as replacing *Millennium*'s engine — they had to delay their plans. "This year we'll make it, though," says John with confidence.

An aircraft engineer by trade, he built this fiberglass sloop 20 years ago, and set sail from Sydney six years ago. Somewhere along the way he met Nat — perhaps in her native Thailand — and they've been sailing partners ever since.

The game plan is to work their way back to the Land Down Under, but as is wise for any cruiser, they're in no particular rush to get there.

---

**Spruce — Hallberg Rassy 42**

*Sue & Andy Warman, GBR*

By the time we threw our PPJ fiesta in Panama, Sue and Andy were already en route to the Galapagos. But we learned about their background via an email sent from mid-ocean.

Both grew up sailing and racing dinghies, and as adults they explored Northern European waters whenever they could. They liked the cruising life so much that they retired early to pursue it.

Today, after cruising the Eastern Caribbean, the Eastern Seaboard as far north as the St. Lawrence Seaway, and elsewhere, they each have 40,000 offshore miles beneath their belts.

In the future they hope to explore Alaska and the Northwest. But that will be after island-hopping to Australia. Sounds like the good life to us.

---

**Orca Suite — Morgan 0/1 33**

*Bill & Belinda Tackett, San Diego*

We'll close this month with an introduction to Bill and Belinda of San Diego — whom we've met only via email. They didn't make it to either of our send-off parties, but didn't want to miss out on their 15 minutes of fame in these pages.

When they did their first stint of cruising in 1996, Bill was confident, as he'd grown up sailing in California. But for Belinda, who was born and raised in the Midwest, the sailing life was a completely new adventure. That trip took them from San Diego through the Canal and up to Florida.

This year, newly retired, they're thrilled to be back 'out there' again with an open-ended timetable. "Our motto," says Belinda, "is: 'Live, laugh, love, show respect for all cultures, and make time to dance while you can, because life is so precious.'"

*Words to live by, and an excellent sentiment to close on.*

In the coming months, after all these voyagers make their landfalls, we'll bring you a recap detailing both the highs and lows of the fleet's passage to Polynesia.

*Niue, a completely different destination on the "Coconut run".*
"Pole up! Pole back!" I shouted from the helm. "Pole back, now!"

I'd promised myself I wouldn't raise my voice at this crew. Most of them were very new to big boat sailing, although there were a couple of very accomplished dinghy sailors on board.

Lee Helm was to blame. She had recruited the entire crew from among her grad student friends at the local university sailing club, explaining that anyone who could sail a small boat could easily figure out a big boat. But she also insists that the reverse is not true at all; many experienced big boat sailors are helpless on dinghies.

She is probably right when it comes to handling the helm of a big boat, but her theory was proving false for cockpit crew. These kids were many steps behind the action as we rounded the windward mark and tried to set the spinnaker.

"Please . . . square the pole back," I pleaded.

"Foreguy! Foreguy off!" shouted the mechanical engineering student. He had never raced on a big boat before, but he had a good steep learning curve and was picking it up fast.

"I can't!" replied another beginner, this one a math major. "It's out to the knot!"

"Free the other side," shouted a postdoc physicist who had properly diagnosed the problem. "You left all the tail on the leeward side!"

The foreguy on my boat is double-ended, and there was nothing left to let out on the windward side cleat, the one within reach of the pole trimmer. It was only a small example of the kind of thing good crew will anticipate automatically, but it doesn't occur to beginners no matter how good they are with a Laser in 20 knots.

Lee Helm was the first to push past the confused sheet trimmer to pop the leeward-side foreguy out of the cleat. Then the pole came back, the spinnaker filled, and all at once the pole was topped up the rest of the way and the sheet trimmed out, the spinnaker finally started to look good. We were still in the hunt.

To be honest, the problem was only partly due to my novice crew. I had just upgraded to the double-ended system, to allow the afterguy trimmer to reach the foreguy control while working the windward primary winch. It's a common enough arrangement and a long-overdue change — but getting stuck with all the tail on the wrong side was an unintended consequence. When the spinnaker was stabilized I began a brief lecture about the importance of "balancing the tails" on all double-ended controls.

"Max," Lee interrupted, "do you still have that splicing kit onboard?"

"It's in the green ditty bag under the starboard settee," I answered. "Why? Did something break?"

"No, but I think I have time to, like, fix the problem."

"Lee," I said as she jumped down the companionway, "I'd rather you stay on deck and coach the trimmers. Especially your friend, the math major."

But it was no use. She had the splicing tools out and was bringing both free ends of the foreguy line down into the cabin where she could work on them.

"Don't tell me you're going to put a long splice in the foreguy tails before we get to the jibe mark," I said incredulously.

She looked back at me from inside the cabin and nodded.

"I asked you not to tell me that. Those splices are difficult, even in new rope."

"I'll come up for the jibe," she assured me. "Only be a minute or two."

"What's she doing down there?" I asked the physicist. "And what's a long splice?"

"Oh, I get it," said the mathematician. "She's going to join the two ends of the foreguy together into a continuous loop, so we don't have to worry about which side has enough rope to let out. Nice."

"But it must take hours to splice this stuff," said the engineer as he switched to his reading glasses to examine the line more closely. "Look at this intricate braided pattern."

"I'm not going to braid anything," Lee shouted back up from the cabin. "The rope is made of a core and a cover. Both components are about equal in strength. Observe."

"No!" I commanded. "Trimmers, keep your eyes on the spinnaker! Lee can teach splicing 101 after the race."

My instruction was forceful enough to shift the cockpit crew's attention back to the sail trim, and they squared the pole back a little more as I worked down closer to our course to the next mark. Speed was good — the diver had done a good job on the bottom, and the sailmaker had made a fast spinnaker — and we established a leeward overlap on a boat that had rounded ahead of us. When the Windex pointed at the mark, I called for the jibe. It would put us inside and to windward on the leeward mark.

Lee popped up as promised, working the spinnaker pole through the jibe while explaining that when the apparent wind points at the next mark, it’s time to jibe.

"Of course," said the engineering student. "That's because the boat speed vector is about the same magnitude as the apparent wind speed, so the vector diagram for true and apparent wind is an isosceles triangle."

"Sheet in!" I had to yell to get his attention back on his immediate job.

We managed a reasonable jibe considering that for three of my crew it was their first ever on a boat over 15 feet long.

Lee ran below again to finish her splice, but I was getting worried as the leeward mark drew closer. There was still a lot to do up on the bow.

"Done," she announced as she threw the ends of the foreguy back into the cockpit. Except there were no ends now, just part of a loop. I couldn't even see where she had spliced it together.

"It's, like, only half-strength," she admitted, "because I cut off and throw away the core and just use the cover for the splice. But the rope is sized for handling, not strength, so it's totally strong enough. No more worries about which side has all the tail."

"Thank you, Lee," I said quickly. "Now let's get the jiby ready to hoist and the spinnaker halyard ready to run."

As I spoke, I noticed that the spinnaker halyard had never been made up after the hoist. It was a tangleed mess.

"Coil the spinnaker halyard for the drop," I ordered the physics student.

"Right!" he answered as he searched for the loose end, finally locating it among the spaghetti on the cockpit sole. He started to coil from the end.

"No. coil from the winch out," suggested the engineer. "That way the twists
can come out as you coil. And run it first to make sure it’s not tied in a knot.”

“That’s topologically impossible,” said the math major without looking down from the spinnaker. “The end was never free to loop through itself.”

The physics major dropped the end of the line and started again at the rope clutch on the cabin top, making rather small coils as he pulled the tangled line out of the cockpit well. With a little shaking, the tangles did eventually sort themselves out.

Meanwhile Lee was on the bow getting the jib ready for the hoist, but she looked back long enough to suggest that the halyard should be made up in figure-eights instead of circular coils.

“Why?” asked the physics post-doc. “I’m running from the fixed end out, so the twists are all gone when I get to the end. Look!”

He held up the almost-finished armful of circular coils.

“Looks pretty clean to me,” said the engineer.

“No, each loop will transform into one full twist rotation when the rope unwinds,” said the mathematician.

“Not true,” said the physicist as he rotated the coil as if it were rolling off a spool in the chandlery. “No twist at all.”

“But it will pay out on an orthogonal axis,” said the math major.

The engineer pulled the line out of the coil at right angles to the coil, but it was inconclusive. “There’s a difference of one rotation per coil, depending on how it pays out,” insisted the mathematician.

The physicist still didn’t buy it, but the math major was backing up the engineer with some topology theory that flew well over our heads.

“Jib up!” I ordered. The mark was getting close.

They knew how to raise a sail and tension a halyard, but the rounding was pretty sloppy. The spinnaker halyard did not run smoothly, the afterguy was not eased far enough, and when the halyard was finally freed it ran right out to the knot, turning the top half of the spinnaker into an air brake as I tried to turn the boat upwind. And no one seemed to remember to sheet in the jib. We lost the place we had gained on the downwind leg.

“Max, you need a longer spinnaker halyard,” Lee advised after everything was sorted out and the crew were all back on the rail for the long beat to the windward

The Long Splice 12-Step: 1) Mark the rope at least 100 rope diameters (200 for high-load applications) in from the end; tie a knot inside the mark. Make sure the knot is a slip knot that can be untied without access to the end of the rope; 2) Pull core out of the cover. Cut off a fused rope end and replace with a loose tape whipping so core can slide out easily; 3) Cut off almost all exposed core; 4) Mark cover at the halfway point. Prepare other end of the rope the same way, repeating steps 1-4; 5) Tape end of one of the covers to a hollow fid for the correct diameter rope; 6) Enter cover of other end of the rope, a little inboard (meaning away from the end) of the halfway mark; 7) Your goal is to emerge at the same place that the core came out, but you won’t be able to reach this in one move, so plan to take several ‘dives’. Come up for air and dive again as many times as needed to reach the cut core; 8) The last dive emerges where the core has been pulled out; 9) Attach cover from other end of the rope to fid, and enter first cover, also slightly inboard of the halfway mark; 10) Repeat steps 7 and 8 on the other side. The middle of the splice will look like this; 11) Take off tape and pull covers out just enough to close up middle of the splice; 12) Cut off loose ends (a little at a time as you work the ends back inside as it’s easy to cut off too much) and untie the knots.
mark. "The head should be able to stream out all the way downwind without catching any wind or water."

"That would mean it has to be as long as the square root of the mast height squared plus the sum of the quantity pole length plus spinnaker luff squared," noted the engineer.

"Plus the mast height plus the run on deck to the winch and rope clutch," added the physicist. "Plus the turns around the winch."

"For sure," said Lee, agreeing with the arithmetic. "It’s, like, especially important for the emergency douse in a squall, like on an ocean race when the crew on deck is shorthanded. When the wind suddenly comes up to 35, the fastest crash douse is to just let the halyard run and head up slightly. If the halyard is long enough, and the pole is reasonably high, and the driver heads up the right amount, the wind keeps the chute off the water till there’s enough crew on deck to haul it in. But the halyard really does have to be that long."

"Have you priced halyards recently?" I asked rhetorically.

"There’s a work-around," said Lee. "Modern halyards have all the strength in the core and the cover is just for handling. Your halyards are core-only for the working part of the halyard, with the cover only left on for the part that’s on the winch and the rest of the tail. That means the rigger totally threw away about half the cover."

"That’s what they recommended," I said. "Seems to work well. Saves weight and windage for most of the loaded part to be core only."

"But you can use that cover to extend the length of the halyard instead of tossing it," explained Lee. "Instead of just stripping the cover from part of the rope, slide the core out. So the loaded part is just core, the part that goes around the winch and cleats that you have to pull on is core plus cover. And the long tail can be just cover. You get to use all the rope and it ends up a lot longer than the length you buy."

"Brilliant!" I said, once I had a picture in my head of a halyard with core-only at one end, tail-only at the other end, and only a small length in the middle with both. "That has special appeal to us tightwads."

"All sailors are tightwads," noted the physicist. "Because sailing gives the illusion of getting something for nothing."

While we pondered that, the engineer questioned whether the cover-only part of the halyard tail would be substantial enough to work properly in the cleats and rope clutches.

"You might have to put an extra dingleball at the end instead of a figure-eight stopper knot," Lee conceded. "Or, even better, you can run a cheap Dacron rope inside the cover as a substitute core. That would be the cool solution."

On the next tack, the engineer had a chance to examine Lee’s long splice in the foreguy in more detail.

"I don’t see what keeps it from pulling right out," he wondered. "There’s nothing mechanical holding the cover from one end inside the cover from the other end."

"It’s the Chinese handcuff effect," I
ventured a guess. "The cover pinches in under tension."

"There’s even a new kind of rope clutch that works that way," said Lee. "Coolest new product at the boat show last month. No teeth, no line damage, and it pops open with a trip line, much quicker than a conventional clutch, but holds just as well. And because you can, like, work the trip line remotely, it might even be a good halyard hook, on boats where mast compression needs to be reduced."

Lee went on to describe a rope clutch that works just by capturing the line inside a short length of a larger braided rope cover. When the cover stretches under tension induced by the halyard friction, it holds. When the trip line compresses the cover, it lets go. But no matter how detailed her description became, I just couldn’t visualize this thing without a picture, and even then it wasn’t really clear till I played with the demo a few days later at the rigging shop.

Our second spinnaker set was even sloppier than the first, with the sail filling when it was halfway up and the physicist, who was supposed to be tailing, not keeping up with Lee jumping the halyard. And even though I still had no clear idea how the thing actually worked, Lee had convinced me that one of the new toothless rope clutches on the mast would be the ideal spinnaker halyard cleat. The halyard would go up but not down when it was engaged, but could be released and recaptured instantly via the trip line control at the mast during a douse.

At least the second douse went well, now that the debate about circular versus figure-eight coils had been settled in favor of the figure-eight. Under the circumstances, our mid-fleet finish was better than expected.

The engineer wanted to see how that long splice was done, so on our way home Lee put another long splice into the two ends of my double-ended mainsheet.

"Good thing the mainsheet is almost new," she remarked. "Splicing is, like, just about impossible if the line is old. Otherwise I’d do the double-ended boom vang, too."

"That line has been around the block a few times," observed the mathematician.

That set the tone for the rest of the sail back to the marina. But when putting the boat away, Lee suddenly stopped short while attempting to coil up the new endless loop she had made in the mainsheet.

"There are no ends on those lines now," I reminded her.

But it was worse than that. The foreguy loop seemed to be led through the loop made by the mainsheet, locking the two loops together like links of a chain.

"Topologically," said the math major after taking a long look at the problem, "there is no solution that does not involve doing the splice over again."

"Wait, maybe we can compress the covers and reduce friction enough to allow the splice to slide apart," suggested the physicist.

The engineer just handed Lee the rigging knife.

― max ebb
April on San Francisco Bay taunted racers in the 60th annual Bullship with drizzle, while the rest of the month offered delightful conditions for a glut of offshore races: the Doublehanded and Crewed Lightship Races, and the Doublehanded Farallones. Farther south, the Newport-Cabo Race saw even lighter winds. Back on the Bay, the Wheeler Regatta also enjoyed beautiful weather, as did several Beer Can Races (we’ll report on those next month). Don’t miss Race Notes for more, and subscribe to Lectronic to stay up-to-date.

60th Annual Bullship Race
April 6 dawned cool with a drizzle so heavy it was actually raining for the start of the 60th annual Bullship Race, the iconic event in which a fleet of 8-ft El Toros scoot across the Bay from Richardson Bay to the Cityfront. Heavy fog concealed Yellow Bluff, the Bridge, Alcatraz and the Cityfront finish line 3.28 miles away. With a southwesterly wind and max flood current — the wind and water moving in the same direction — the Bay was smooth but still looked ominous. After an hour-long postponement, the fog still hadn’t lifted so Race Chair ‘Juan’ Amen started the 24 intrepid toreadors.

The start off Sausalito was slow, but once the fleet cleared Yellow Bluff, the wind bent around to the west and increased. With nine boats being sailed by previous Bullship winners, this year’s fleet was very competitive. Some boats played the current lines between the building shore ebb and the strong mid-Bay flood. Even though there were 2.5 miles still to go, everyone wondered who would correctly guess the wind and currents at the San Francisco finish line. The middle course turned out to be the right course.

Gordie Nash was first across the line after just 65 minutes, followed by Buzz Blackett and Bruce Bradfute. Vickie Gilmour was the first woman to finish, Award for coming in DFL. In the end, all 24 boats finished, a feat to be proud of.

BULLSHIP RACE (4/6)

IYC Doublehanded Lightship
After last season’s rough and wild conditions, Mother Nature decided to give the ocean racing fleet a bit of a break this year. Due to little or no breeze and a solid flood for the start of Island YC’s Doublehanded Lightship Race on March 23, the race committee gave the small but talented fleet a 40-minute postpone-ment before getting them underway.

First in division and first overall was Richmond’s Andrew Hamilton with crew Simon Winer aboard Hamilton’s Moore 24 Bar-Ba-Loot. After a good start, Hamilton worked to keep the boat out of the dying flood and set up to the north side of the Golden Gate, sailing a long starboard tack all the way to the Lightship. The rest of the fleet worked farther north off Rodeo Beach, preferring to call a layline from miles out. “We ended up about a quarter-mile shy of the buoy but at least we didn’t overstand,” said crewman Winer.

Second overall and first Express 27 was fleet standout and St. Francis YC’s, Ray Lotto with his longtime crew Steve Carroll aboard El Raton. Lotto alarmed fellow racers by sailing close to a known rock at the Point Bonita Lighthouse. “There is a rock out there that you can see at low tide and in the troughs, but most of the time it’s covered with enough water,” he said.

If a skipper and crew ever wanted to take on what is often a spring mini rite of passage, this would have been one of the better opportunities, as many of the teams slipped back under the Golden Gate Bridge in shirtsleeves. With the mild conditions, easy laylines, consistent wind and moderate current, 22 of the 25 starters finished well before happy hour.

— duncan carter
Newport-Cabo Race

In stark contrast to the 2011 edition of the biennial Newport-Cabo Race — which included broken boats, dismastings, crew injuries and a more than 50% attrition rate due to a strong southerly — the March 23 start for the ORR divisions (the slower PHRF division started the day before) in the 2013 event was a mostly light-air affair that saw the fleet depart into a light southerly beat. With the bulk of the fleet carrying masthead genoas, Code Zeroes and specialty light-air sails off the start, the conditions made for stunning photographs and short-sleeve conditions, if not exciting racing.

After the PHRF start, the turboed Express 37 Expression Session worked offshore for more breeze and instead found . . . nothing. They ended up bailing to San Diego. The next day, Skip McCormack, the Marin-based navigator of the R/P 52 Meanie, took note of Expression Session’s routing error and opted to stay inshore of the fleet and work the offshore breezes through the first night. The plan worked. While much of the fleet stayed near rhumbline and floundered around in nearly non-existent breeze, the sexy blue 52-footer jumped out in front to lead the premier ORR-1 fleet and battle for the overall lead.

With the dawn of Day 2, racers found increasingly better breeze and sailing conditions, although it would remain light for the duration of the race. As the breeze clocked aft, it became a battle of angles as the more modern fixed-bowsprit boats were forced to reach up to generate boat speed, while the older spinnaker-pole boats could soak deeper, and run lower and slower down the course. In the end, everyone seemed to achieve almost the same VMG, with many boats in the race staying within visual distance of their closest competitors almost all the way to Cabo.

At the front of the pack, the race’s sole multihull, HL ‘Loe’ Enloe’s Jeanneau-built ORMA 60 tri LoeReal, claimed line honors with the R/P 74 Wizard (ex-Bella Mente, which dismasted in the ’11 edition and then went on to take line honors in the TransPac) beating the Davidson 70 Pendragon VI to the line to resume their role as the baddest, fastest monohull on the West Coast — even though they’re an East Coast-based boat.

In ORR-1, the TP 52 Natalie J started off their season right by claiming a close and hard-fought class win over Wizard while Meanie slipped to third place for a well-earned podium position. After a podium finish in the Islands Race, the Andrews 70 Pyewacket continued their solid season by claiming the nine-boat ORR-2 (Sled) class win and the overall win, though it was neither easy nor a sure thing until the very end. It’s said that “light air is the great equalizer,” and nothing could be more accurate after watching the sleds’ rankings change at seemingly every check-in.

One of the best battles on the entire race course was in the ORR-3 division where the Rodgers 46 Bretwalda 3 was able to jibe inside and work the land breeze and shifts near Mag Bay to finally overhaul their chief competitor, the perpetually well-sailed Santa Cruz 50 Horizon. “This was a really tough race course,” commented renowned Horizon navigator Jon Shampain. “You go out and there’s no pressure. You go in and you get caught in the transition from a dying breeze to a new shore breeze. There were holes everywhere and we came up just a bit short of the mark. Great job by Bretwalda 3.”

The PHRF division saw Matt Brooks’ beautiful S&S 52 Dorade crush their five-boat fleet on corrected time, despite being the very last boat left on the race course. The benefactor of a major winter refit and an immensely talented crew, the beautiful Bay Area-based ketch won her class convincingly by nearly seven hours.

The Newport-Cabo Race was a light-air affair.
PHRF class aside, the top placing Bay Area boat was Chip Megeath’s R/P 45 Criminal Mischief. Handicappers always have a hard time with the Criminal, owing to her massive sail plan and comparatively short overall length. Placed in the Sled division, where every other boat was 23-25 feet longer than the Criminal, they got waterlined off the start to bring up the rear of the division, yet managed to scrape their way back to fifth in class and sixth overall. Navigator Brendan Busch threaded the needle all the way down the Baja coast to keep the Criminal in pressure.

After the race, Murphy’s Law was in full effect. After blowing 0-12 for the duration of the Cabo Race, the forecast was ominous for the boats returning north. The boats that "turned and burned," leaving Cabo immediately after the race, were spared the worst of the breeze. But for the rest of the returning fleet, it was Gale City all the way home. The blue Santa Cruz 70 Maverick took a long tack out and tried to lay San Diego on one tack. The result: a broken ring frame and a trip back to Cabo. And on Criminal Mischief, which sailed all the way back to San Francisco, the crew encountered no fewer than five gales, eventually turning around and running away from one near Pt. Sur where they hit an astounding 24 knots of boat speed under double-reefed main and storm jib!

BYC Wheeler Regatta

Celebrating its 41st year, BYC’s Wheeler Regatta drew 51 boats to the Central Bay starting line on April 13. Two events were run simultaneously: the City of Berkeley Regatta, where three divisions of smaller boats competed in three races on the Olympic Circle, and the Wheeler Regatta proper, where four classes of faster-rated boats also had three races. Fluky winds occasionally came from the ‘wrong’ directions, but everyone still had a great time.

At Saturday night’s awards presentation, Mayor Tom Bates presented the City of Berkeley perpetual trophy to Mark Simpson for winning the first regatta aboard his Olson 25 Shadowfax. Bartz Schneider on the Express 37 Expeditious took home the Wheeler perpetual.

The weather changed for the following day’s 10.1-mile pursuit race, which would take 24 boats from the Circle out to Harding, over to Blossom Rock, down to a temporary leeward mark, and back to the finish. A westerly came in before the start and built throughout the day.
increasing the seas along the way. The flood that was on full-blast gave racers a challenge at Harding, forcing some to attempt the rounding four times before managing the job.

Traditionally, this has been a 'big boat' race and, at first glance, it looked as if this year's edition would be no exception. However, as the race committee watched from the race deck, we could see a small boat quite far in front on the run from Blossom to the leeward mark. Gradually, yard by yard, wave by wave, the bigger boats closed in. As the fleet made their way to the finish line, the distance between the little boat and the bigger boats got smaller and smaller, until the gun sounded and the little boat — Michael Whitfield's J/24 TMC Racing — made it across first! Especially fun was that the top five boats finished within 1m, 12s of each other.

OYRA Crewed Lightship

The Offshore Yacht Racing Association’s 2013 racing season kicked off April 20 with the annual Full Crew Lightship Race, which takes racers on a 30-mile course from the Cityfront out to the separation buoy — affectionately known as the Lightship or Lightbucket — lying some 13 miles west of the Golden Gate Bridge before running back into the Gate and to the finish.

After two weeks of gale-force northwesterlies raging down the coast, an area of high-pressure settled over the coast, creating light to moderate breeze and flat seas in what turned into a picture-perfect day of Champagne sailing for the nearly 50 boats competing. Owing to an ebbing current, the fleet was quickly sucked out the Gate, forcing many boats to sail close to the South Tower. Past Pt. Bonita the breeze went light across the board, forcing the majority of the fleet into unplanned sail changes before forcing another sail change to their next heaviest jib halfway to the Bucket.

With boats rounding in quick succession and immediately popping their biggest downwind runners, the race for the Gate was on. "We battled back and forth with the Farr 40 Twisted the en-
of the perils at sea. They're harsh reminders of the friends we've lost and the fact that this fun sailboat racing thing can be hazardous to one's health.

But then Mother Nature gives us a reason to remember why we head out beyond the confines of the Golden Gate.

By all accounts, March 30 was a beautiful day for the Bay Area Multihull Association's Doublehanded Farallones Race. Following a push out the Gate on a four-knot ebb, and not far past Mile Rock, a transition breeze built into a 15-knot southerly that allowed the entire 49-boat fleet to make Southeast Farallon Island on an easy fetch.

"We only did the race because the forecast looked like it was really going to favor us," said Millennium Falcon skipper John Donovan. "Our rating takes into account that the Cross 27 trimaran is really horrible upwind in 20-plus knots, especially in a big seaway. So if it had been some sort of slug fest we would have stayed home."

On corrected time, there were none better.

Even though one racer called the event "almost boring," there were several transitions on the way home, making it important to pay attention to strategy so the mild conditions wouldn't hull crews into crucial mistakes.

"We felt it was important to watch the wind on the water to see where it was, rather than chase something that wasn't there," noted overall monohull winner Stan Honey, who sailed with wife Sally aboard their Cal 40 Illusion.

Donovan, the overall multihull winner with crew Doug Frolich, agreed. "On the way back, a bunch of boats started heating north, going for speed or maybe anticipating the northwest winds that were forecast to fill at the end of the day. We just stayed disciplined in a nice little lane to the south of them so, when we got to the Gate, we easily picked up the end of the flood. We just smoked the F-31s when they got caught in lighter breeze and probably a nasty bit of early ebb."

California Condor designer Jim Antrim also had something to say about the F-31s. "Those pesky F-31s dogged us all day, but when we dropped south of them, we really made it up. We had a good shot at first-to-finish until rigging problems took it away."

He noted that he has a plan that should fix the issue for future races.

— dave wilhite

BAMA DOUBLEHANDED FARALLONES (3/30)

MULTIHULL — 1) Millennium Falcon, Cross 27, John Donovan/Doug Frolich; 2) Rainbow, Crowther 10m, Cliff Shaw/Bernard Quante; 3) Papillon, F-27, Andrew Scott/Gordie Nash. (8 boats)

PHRF < 52 — 1) Twist, J/120, Timo Bruck/Chris Desalvo; 2) Void Star, Santa Cruz 40, James Murphy/James Jenson; 3) California Condor, Antrim Class 40, Buzz Blackett/Jan Antrim. (6 boats)

MOORE 24 — 1) Banditos, John Kornet/Chris Chapman; 2) Masi, Mark English/Lan Rogers; 3) Mooretician, Peter Schoen/Roe Patterson. (6 boats)

PHRF 52-74 — 1) Escapeade, Express 37, Nicolas Schmidt/Erik Rystrom; 2) Elan, Express 37, Jack Peurach/John Duncan; 3) Ohana, Beneteau First 45/5, Steve & Nate Hocking. (5 boats)

ULDB VIRTUAL FLEET — 1) Vitesse Too, Hobie 33, Grant Hayes/Volker Frank; 2) Zsa Zsa, 1D35, Stan Glaros/Paul Harris; 3) Moonshine, Dogpatch 26, Dylan Benjamin/Zac Juddkins. (3 boats)

Race Notes
Among the top finishers from the West Coast at Sperry Top-Sider Charleston Race Week on April 18-21 were Bruce Ayres of Costa Mesa’s Monsoon and Argyre Campbell of Newport Beach’s Rock N Roll, which placed third and fourth in the 37-boat Melges 24 class. Take a look at www.charlestonraceweek.com for complete results.

The Ski/Sail National Championships was cancelled due to lack of snow and lack of sign-ups, but some Bay Area Vanguard 15 sailors put together a low-key regatta at Treasure Island Sailing Center on April 13 instead — minus the skiing — in 10-15 knots of breeze. Avery Patton and Natasha Baker vanquished the other seven entries in seven races.

For more racing news, subscribe to ‘Lectronic Latitude online at www.latitude38.com.

April’s racing stories included:
DH Farallones • BYC Chowders America’s Cup • Collegiate Regatta Wheeler Regatta • St. Barth Bucket Les Voiles de St. Barth • Congo Cup Beer Cans • SeqYC Summer Series Bullship • Big Dinghy • J/Fest Low Speed Chase Anniversary Match Race Invitational • WBRA Camellia Cup • OYRA Lightship International One Meter Nationals • Charleston Race Week, Transpac, Sailing World Cup, Twin Island Series, and Elvstrom Zellerbach previews, and much more!

See more at http://vanguard15.org.

If you were thinking about taking the Safety at Sea seminar scheduled for May 19, be advised that the venue has changed from Cal Maritime Academy to Berkeley YC. This all-day US Sailing-approved seminar will count for the Spinnaker Cup, Coastal Cup, TransPac and Pacific Cup. Sign up in advance to save some bucks. For more info and to register, see www.pacificcup.org.

US Sailing is launching a new Junior Big Boat Sailing Program, an opportunity for teenagers to sail with an instructor or coach on 35- to 45-ft boats. New sailors will learn the ropes on a big boat platform, and experienced junior sailors will learn to apply their small boat sailing skills to the bigger boats, with the focus on fun and teamwork. Free resources are available. Several organizations are field-testing and providing feedback on the program, which will be made available to all member clubs in the fall of 2013.

Taking Stock of the International Charter Industry

It’s been more than four decades since the concept of bareboat chartering became established as a viable vacation option for sailors. From its humble roots, with tiny fleets of often-mismatched boats, the sail-it-yourself side of the international chartering industry has grown to include some of the most sophisticated ‘production-built’ boats ever launched, and you can now find bareboat bases in almost every prime sailing venue on the planet.

Over the decades many small companies have merged, been swallowed up by bigger ones, or simply disappeared. Nevertheless many well-managed small outfits still exist today and are doing quite well — often focusing their efforts on a single destination where they can offer first-hand local knowledge and personalized customer service.

Some smaller companies have found a comfortable niche within the industry by offering older boats to budget-minded vacationers at prices substantially lower than what they’d pay for a new or nearly new boat. Because all charter firms rely heavily on repeat clientele, badly managed companies with lousy reputations for maintenance tend not to last long in today’s highly competitive market.

The question of which company to book with can be tricky. Although we’re not in the business of recommending one company over another, we do strongly recommend booking with a business that has representation on U.S. soil, if possible. Not only will communications be easier, but you will have a means of recourse in the unlikely event that you have some sort of grievance about your trip. Also, if you book with a foreign firm over the Internet, be sure to seek recommendations and reviews. (Many frequent travelers can relate to the disappointment of booking a hotel room that looked absolutely luxurious on a website, but turned out to be disappointingly drab and dreary — or worse.)

It’s probably safe to say that the top tier companies within the industry are more dynamic today than ever before in terms of charter offerings. Many now offer crewed charters on their larger yachts in addition to skipper-only and bareboat options.

Just last month The Moorings announced the availability of (crewed) charters in the remote Tuamotu Islands of French Polynesia aboard their popular three-cabin Moorings 4600 cats. (Book-by-the-cabin and bareboat charters may be available in the future.)

A favorite venue for international cruisers, this massive archipelago of low-lying coral atolls offers some of the best snorkeling and diving in the world. While you’re anchored inside the turquoise lagoons here, the trade winds will wash over you, but the seas will be flat. This is a destination where you will truly feel as though you are a million miles from the mainstream, as land-based tourism is minimal and the atolls are only sparsely populated.

For the shoppers in your group, the Tuamotus offer an abundance of an otherwise rare commodity: black pearls. Cruisers tell us you can negotiate prices for these shimmering specimens that are much, much lower than in the fancy shops of Tahiti and elsewhere.

The Moorings also just announced that its new "flagship" yacht, the Moorings 5800, will be available next month in the BVI and elsewhere. Carrying 12 passengers in six private staterooms, this elegant 58-footer features an elevated central helm station that has 360° visibility. And while it can be booked with full crew, it can also be bareboated — the largest uncrewed boat offered in the world.

While The Moorings’ La Paz, Mexico, operation is going strong — it’s the one and only bareboat base in Mexico — we’re told they will no longer offer poweryachts there.

Meanwhile, The Moorings’ sister company, Sunsail — both are owned by the global travel firm Tui Marine — is also
OF CHARTERING

see that sleek, sexy fleet leave the Bay. Although less well-known to North Americans, Dream Yacht Charter has become another major player within the bareboat and skippered charter industry. In recent years it has grown dramatically, now having 34 bases in more than 20 countries. Among them are several bases in the Indian Ocean, plus both Thailand and Malaysia, Tahiti, New Caledonia and Cuba.

Another biggie you may not be familiar with is the Greek firm Kiriacoulis which has 25 bases in the Europe and the Caribbean, including Malta, Croatia, Turkey and Greece.

All in all, this burgeoning industry has evolved into a highly sophisticated branch of tourism that provides what we think are some of the best vacations that money can buy. The purpose-built boats that now fill international fleets are light years ahead of the humble original bareboats of the 1970s in terms of performance, creature comforts and sensible use of both interior and exterior space. Because of those developments, it’s no wonder so many sailors are charter junkies who take one or more sailing vacations a year.

The final point we’ll make here is one that we reiterate often in these pages: There is no better preparation for would-be cruisers than to spend a few weeks a year taking charge of a fully functional ocean-ready bareboat in foreign waters. Not only does the experience give augmenting its offerings. A new base at Palma de Mallorca, Spain, gives access to the Balearic Island chain, which offers everything from world-class nightclubs to tranquil anchorages in unspoiled natural surroundings.

The company also has a new base in the Med at Cannigione, on the charming Italian island of Sardinia. The port is ideally located to explore the Costa Smeralda, the Bay of Cugnana and the Gulf of Cugnana. Sardinia’s craggy coastline gives way to cozy protected coves that have been favorite escapes for European sailors for generations. Towns and villages offer classic Italian hospitality and cuisine.

One move by Sunsail that we were sorry to hear about is the abrupt closing of their Sausalito base here in San Francisco Bay. It opened only a year ago with a fleet of eight identical 40-ft sloops that were set up for both Bay cruising and racing. But the base apparently wasn’t generating the volume of bookings that company managers were hoping for. No doubt the smaller-than-expected field of America’s Cup competitors coming to town this summer played into the bottom-line decision. In any case, we’re sorry to see that sleek, sexy fleet leave the Bay.

Two faces of the Balearics: a serene anchorage away from the bustle, and Palma’s busy harbor with its landmark cathedral.

ART HARTINGER

SPAIN TOURISM
Having raced to Hawaii and cruised to Mexico, 'Ohana' is a seasoned boat, with a highly experienced crew.

you practice sailing, navigating, anchoring, provisioning and keeping an eye on on-board systems, but it gives you a taste of simple pleasures of the cruising life — while building your confidence and forging lasting memories. Starry nights at anchor with a gentle breeze whistling through the rigging, and brilliant sunny days spent harnessing the power of the trade winds as you move from one idyllic landfall to the next; like no other form of motivation, such experiences will reinforce your drive to make your cruising dreams come true someday.

Summer is right around the corner, so if you haven’t yet planned your summer sailing getaway, we suggest you get on it. Corral a group of your favorite sailing companions, pick a location, decide on a date and boat type, and mail off a deposit — nothin’ to it.

— latitude/andy

The Ever-Expanding Bay Area Charter Fleet

Years ago it became an annual tradition to publish in the April edition of Latitude a ‘comprehensive’ list of every crewed charter yacht and bareboat available for hire on San Francisco Bay (and nearby). While we believe that providing this single-source list of charter offerings is a great service to readers, putting it together is a chore we always dread — primarily because, try as we might, we always seem to leave a few boats out.

Sadly, that happened again last month. Our only excuse is that there are so many boats offered for charter these days — especially with the presence of the America’s Cup — that it’s tough to keep track of them all. In any case, let us introduce you to a few offerings that were left out of last month’s overview:

Ohana — is a Beneteau First 45f5 racer/cruiser with beautiful lines and the pedigree of the Ferrari design legend. Although she has raced extensively offshore and locally, she is far from a stripped-down racer. Her belowdecks design features a rosewood-paneled salon, and three private staterooms.

One reason you might want to charter her for America’s Cup viewing is that owner Steve Hocking is a direct descendant of the famed Stevens family of New York. In fact he looks just like John Cox Stevens, NYYC Commodore and owner of the yacht America which originally won...
the Cup.
• Carries up to 6 passengers.
• Berthed at Sausalito.
• Available for custom charters of all types including AC 34 viewing.
• (415) 457-4417; www.OhanaSailing.com

L’Obsession — Although this lovingly maintained 2011 Lagoon 450 catamaran is one of the newest charter boats on the Bay, she has undergone additional upgrades to prepare her local chartering.

With her broad cockpit and comfty, deck-level salon, she is ideally suited for sailing in comfort in blustery Bay conditions.

In the fall of this year, Skipper Ed King plans to take the boat across the Pacific to French Polynesia, offering excursion charters along the way.
• Carries up to 12 passengers.
• Berthed at Berkeley.
• Available for all types of private charters, plus offshore excursions.
• (415) 341-7413; dev.lobsessionssf.com

Last, but not least, we somehow left USA 76 out of last month’s list, despite the fact that we did a feature on her in this section last August. (As Homer Simpson would say, “Duh-ohh!”)

But this gives us a chance to reintroduce you to this unique boat — and with AC 34 only two months away, the timing couldn’t be better:

USA 76 — This 84-ft America’s Cup IACC sloop comes from the stables of Oracle Racing. Launched in 2002, she competed in the 2003 Louis Vuitton Cup in New Zealand. Kiwi-turned-San Franciscan Brad Webb brought her to the Bay to share the thrills of pro racing with mere mortals. A daysail aboard her gives passengers — who are encouraged to participate in the sailing tasks — a rare opportunity to feel the power of a world-class race boat firsthand.
• Carries up to 20 passengers.
• Berthed at Pier 39 in San Francisco.
• Available for ticketed sails and custom charters.
• (855) ACSF-2013 (855-227-3201); www.acsailingsf.com
Hotel California, Too
Steve Schmidt
Santa Cruz Style Cruising
(ex-Saratoga / St. Thomas)

In this month’s Letters, William Coverdale writes about the joys of having owned and sailed his Olson 30 Killer Rabbit since the late '70s, and having only used about 10 gallons of fuel in all that time. If you think that sounds like a bunch of baloney, then maybe you don’t understand ultralight boats.

We recently did three of the four Voiles de St. Barth races on Steve Schmidt’s Santa Cruz 70 Hotel California, Too, the only cruising version of that design ever built. Unlike the racing versions of the boat, she’s got a shorter mast, longer boom, fewer winches and sails — and her inflatable dinghy is dragged up on her massive ‘back porch’.

But like the other SC70s, Hotel California, Too goes through the water easily. While fooling around near the starting line before the start of some races, she’d effortlessly reach along at nearly 10 knots under main alone.

Schmidt, who lived in Saratoga until taking delivery of the boat in 1991, has been cruising her in the Caribbean since about 1995. He tells us that he only uses the boat’s engine for propulsion about 4% of the time. The rest of the time, he gets around under sail.

Sound like a bunch of baloney? Well, there was a two-year period when the boat’s transmission was broken. Instead of getting it fixed right away, Schmidt used his engine as a genset, and sailed the 70-footer when he wanted to go anywhere. That included sailing her in many races.

That brings up another startling statistic. Before leaving California, Schmidt hadn’t been into racing. In fact, he really only got into it after arriving in the Caribbean, and mostly “for the social aspects.” But once he started racing, it almost seems as if he hasn’t been able to stop.

“I don’t race quite as much as I used to,” he told Latitude, “but for the first 10 years in the Caribbean, I raced an average of about 60 days a year. I’d do every fun regatta there was. More recently, I’ve been doing about 50 races a year. So I think it’s safe to say that I’ve done over 500 races, although I’m not keeping count and the total isn’t important to me.”

He’s done about 30 of them single-handed.

What makes this kind of funny is that Bill Lee, the designer and builder of the Santa Cruz boats, wasn’t keen on selling Schmidt a 70 in the first place. After all, the boat was a TransPac and Mexico screamer, and Lee hardly wanted a bastardized version of the boat dogging it on race courses. “I’m only going to sell you the boat,” Lee told Schmidt, “if you promise me that you’ll never race her.”

— latitude/rs 04/15/13

X — Santa Cruz 50
David Addleman
No Thrilla South of Manila (Monterey)

My Filipina girlfriend Shayne and I entered my SC50 in the Puerto Galera YC’s Easter Regatta, an annual three-day cruiser event that takes place about 75 miles south of Manila on the island of Mindoro. We took the opportunity to strip yet more of the cumbersome cruising modifications from X. Without the bimini, dodger, anchor gear, solar panels and all manner of other cruiser clutter, X at last has the fast look Bill Lee intended for the Santa Cruz 50.

Unfortunately, my boat’s years of cruising have reduced her sail wardrobe to a single fragile set. And the remaining sails were far too lightweight for the blustery conditions found on the Verde Channel Race course. For instance, a test outing reduced a fancy laminate mainsail to shreds, shreds that were last seen blowing toward Vietnam. Then we shredded an old spinnaker in the first race.

We abandoned the second race because it was too windy. After anchoring near the finish line and preparing cocktails, we watched the other boats get pounded.

I had expected the easy light-wind racing of the type normally found on Banderas Bay, not the heavy winds more common in the The Slot on San Francisco Bay. The regatta consisted of
three fun pursuit races over three days. Seventeen boats entered. I didn’t ask, but I’m pretty sure we came in last.

Nonetheless, we had recruited a fine crew. We had Bill Moore, an expat from West Coast racing, for local knowledge. Kathy and Jerry McGraw of the Newport Beach-based Peterson 44 *Po'oiro Roa* were also handy crew. The veterans of the ’04 Ha-Ha and the ’06 Puddle Jump had just arrived in the Philippines from Thailand — and asked me to apologize to the Grand Poobah for having not sent a cruising update “in years”.

One sailor whose boat actually enjoyed the challenging conditions was Gary Pione of the Honolulu YC. I’d met him cruising two years before in Palau. He placed well with *Anthea*, a classic Camper & Nicholson 8-Meter that had been built in 1929. Hank Easom would love her.

Puerto Galera is truly the center of yachting in the Philippines. While there are significant sailing activities around Manila and Subic Bay, the best venue, conditions and sailing spirit are to be found here at Puerto Galera.

But last month we traveled about 100 miles north to get a bottom job at Watercraft Enterprises in Subic Bay. We’d heard plenty of scary stories about the experiences other cruisers had had there, so we were extra careful with our communications, got a firm price quote — and received good and honest service. Although the work proceeded at a slower pace than we expected, it was of excellent quality. They have a Marine Travelift for boats to 70 tons, 70 feet long, 18 feet of beam and 17 feet of draft. Larger yachts need to use the nearby drydocks.

We have enjoyed living under sparkling blue skies with no rain for five months, but a change in the seasons is imminent. Soon we will have a parade of thunderstorms and typhoons. So we have secured a recently inspected **It’s hard to know how an 8-Meter like ‘Anthea’, built in 1929, made it to the Philippines, but she thrived in the gusty winds.**

In one sense, this magnificent photo of the Gunboat 66 *Phaedo* belongs in ‘Multihulls Coming To California’ Sightings piece. But as owner Lloyd Thornburg will cruise around the world after finishing the TransPac, the photo fits in ‘Changes’, too. Watch for updates from around the world.
typhoon-proof mooring from the yacht club. Hopefully, there will still be time for a few weeks of good-weather cruising to the nearby islands before the weather turns.

Life is mostly fabulous.

— david 04/10/13

Medusa — Columbia 23
Naomi Crum

Wild Times In Central America
(Santa Barbara / New Zealand)

The following is a letter I wrote to my parents in New Zealand. You probably remember them, as our New Zealand-based family—dad Bob, mom Jennie, brother Malcom, and I—did the 1996 Ha-Ha aboard Gumboot, our CF 37. I was nine years old at the time and my brother was 10. As some Latitude readers may remember, I started my current cruise from San Felipe, northern Baja. I made it as far south as El Salvador last summer, where I put my little boat in a pad-
dock. I returned to Medusa in mid-Dec-
ember, and have been having various sailing, surfing and social adventures since then, but got bogged
down in Nicaragua because of a bad turnbuckle. Anyway, here’s the letter:

‘Whee, the good times are back! But we had to go through some bad times to get here. First, there was all that waiting around in San Juan del Sur, Nicaragua, having to listen to Gangnam Style, good

Lord — while waiting for a replacement turnbuckle. I had one good turnbuckle, so after waiting around forever, I decided to make the 45-minute bus ride to Rivas to get a new one made. We wandered around town for awhile, found a freakin’ machine shop, and said, ‘Make a new one of these.’ I picked it up the next day. ‘Yay, I have a new turnbuckle!’ While in Rivas, we bought lots of groceries. Food is a lot less expensive in Nicaragua than in Costa Rica.

‘When we got back to the boat, we tried the new turnbuckle — and it didn’t fit! Yerrrrhgh! So I decided that I’d just put the old turnbuckle back on. But now that didn’t fit either. I tried so hard to make it fit — which is not the right thing to do with threaded parts — that part of the shroud snapped off inside the turnbuckle! I was ready to cry for real, you guys, because now we had no turnbuckles! And it seemed as though we might never get out of Nicaragua.

‘Things were really shitty, but ‘Uncle’ Dale Dagger came to the rescue! A real turnbuckle, which we’ve been waiting for like five weeks to arrive from the States, was ready to be picked up in Managua! Uncle Dale is so generous, as he chucked me into a taxi for the two-hour ride to Managua and the two-hour ride back. But I got my turnbuckle — as well as a bag of mangoes and some cheese from northern Nicaragua.

‘The new turnbuckle worked. Yah! Then a fella on a charter sailboat in San Juan told me about a machine shop in town that could fix our old turnbuckle. Before and after seeing Immigration, I visited the machine shop dude. Guess what? He fixed the turnbuckle up good, getting that chunk of shroud out. And he fixed the threads. He also offered to crew on my boat. Thanks, machine dude!

‘While in San Juan, we also picked up a new crewmember — Good Good Rae Rae from Oregon. Who knows how long it will work, but I now had a boatload of three girls, myself included. We’re unstoppable! And we would later have to prove it on a dark night on a beach in Costa Rica.

‘We took care of the paperwork bladoodle, got out of San Juan that afternoon, and had a fantastic sail down the coast of La Flor. We even sailed onto the anchor like we love to do. Then we ate some oranges in a real skillful way. We got three-quarters of the orange out of the oranges, then filled them back up with cake batter that Mikaela, my other crew, had whipped up. Then we wrapped them in tin foil. We put some potatoes in some other foil, grabbed some red wine, then piled into the dinghy and headed to shore for a beach party. We had a scary landing, but we survived.

‘If you guys ever get near a fire, try filling orange peels with cake mix and cooking them on the fire. It tastes pretty good.

‘The next day we had a decent sail up — or maybe it was down — to Bahia Salina with a reefed main and a working jib. We always reef the main in Papagayos, and sometimes drop the jib, too. We kind of hunkered down there for a day or two, dug up some clams on the beach, and had a mean feed of them.

‘When the wind finally died down enough for us to be able to haul up the anchor, we had a great downwind sail to the little town of Jinquillal. Some nice
IN LATITUDES

people let us fill our water jugs from their garden hose — yeah, tap water is totally potable in Costa Rica. Later we strolled into town to check the weather on the net and buy some tomatoes, cookies and more veggies.

"It was tricky hauling up the anchor the next day, as we don’t have a windlass or any fancy bits like that. In fact, ever since the Gulf of Fonseca we haven’t even had a measly winch handle on the boat. We just haul the anchor up from the stern — so we can use the winch — and just coil the rode directly into the anchor basket we keep on the stern. There’s no place for it on the bow anyway. Sometimes it’s hard pulling Medusa ass first into the wind, but we’ve managed.

"We had to take care of a few lines or something, so we got blown out of the bay at three knots with no sail up. Gnarly. We got the working jib up — nothing else — and started hurtling downwind at seven knots! Dudes, seven knots! Medusa was lovin’ it!

"We shared Bahia Santa Elena with another boat — Viandante — which also had young peeps. Yay, we had so much fun with them, doing a little snorkeling mish, chowing down on the biggest sierra I’ve ever seen — which they caught from their dinghy — and other stuff. Michaela and I then hiked up the waterfall to clean our dirty laundry, wash our hair, and fill up the water containers. Oh man, we also went snorkeling and a spotted eagle ray was just chilling out a few feet away from me. It made me feel like putting my spear gun between him and me. They are beautiful, but they’ve got those killer tails, you know.

Anyway, we left at 4:30 a.m., at the same time as our buddies on Viandante — we wanted company and support — to move before the wind really came up. We were both worried about Cabo Santa Elena, as word on the street was it can be twice as windy as everywhere else! Mellow papagayo winds are like 25 knots, so does that mean it’s like 50 knots on a mellow day at Santa Elena? Argh.

"So, safety in numbers, we chugged out of Bahia Santa Elena and put up the regular canvas, being the reefed main — haven’t shaken the reef out in months — and working jib. Man, Viandante kicked our little butts, as a 37-ft boat should, but we assumed the wind was gonna kick up pretty soon, and we’re too lazy to do a sail change up to the big jib, so we didn’t move too fast. Plus we didn’t want to shake out the reef as it had kinda gotten a groove after being in so long.

"Oh man, we got pretty close to Cabo Santa Elena and started to commune with some whales. They were doing their thing — eating, I guess. When you get pretty close to them, it’s like, "Hmmm, they are pretty big. Actually they’re really big. I don’t believe how big they are!!!"

Anyway, we had light and fluky winds like we hadn’t had since Mexico.

In conclusion, we have two turnbuckles, which I’m constantly admiring. We’ve had a week of great sails and great times, and all those great things we’ve been missing for the last 2.5 months when we were stuck in Nicaragua. I’m stoked again, I just need to get up to Potrero Grande and maybe Witch’s Rock to get my surfing stoke back up to maximum levels!

"Oh, I’ve got two bits of news you’re gonna hate. First, a page of the log book blew off the boat and landed in the water. By the time I realized what it was, it was too late to rescue. It was the log from people let us fill our water jugs from their garden hose — yeah, tap water is totally potable in Costa Rica. Later we strolled into town to check the weather on the net and buy some tomatoes, cookies and more veggies.

"It was tricky hauling up the anchor the next day, as we don’t have a windlass or any fancy bits like that. They are beautiful, but they’ve got those killer tails, you know.

Anyway, we left at 4:30 a.m., at the same time as
when I was in Huatulco until we arrived in El Salvador. Buuummmmed. But not the end of the world.

“Okay, the other bad news is my camera got stolen at Playa del Cocos, Costa Rica. I don’t want you guys to worry and all that, but as we were strolling back to the dinghy at 9 p.m. last night — we’d been on the Internet a long time — we got jumped by a couple of dudes on the beach. One of ’em took off with the dry bag Michaela was carrying, which had Rae Rae’s iPod and iPhone, Michaela’s iPod, and my camera — all of which we’d taken to shore to charge up. I fought my dude off, which was good, because I had all the veggies in my bag for our mean fish stew. Plus I’d just gotten about $400 U.S. from the bank. I had my credit card, too.

‘Bastards! We three girls all screamed bloody murder, and Rae Rae’s shining her super bright flashlight on one guy seemed to scare him. Michaela chased her dude down the beach like a beast, but I was screaming, and she was scared for me, so she stopped. I think I’d already won the fight with my attacker by then, though, and was just screaming at the dude in anger. He’d freaked and run away.

“So yeah, we are super lucky that they weren’t more hardcore. I know it’s silly to fight for a few hundred bucks, but after a second I realized they were pussy, not very good at thieving, and not into doing serious damage. Plus we’d just bought all those fresh veggies.

“I filed a police report this morning, and we moved to the southern end of the bay. Right now we are beside a massive 50-ft ketch with like six young peeps, and since there’s a bar right in front of where we’re anchored, the beach won’t be so dark and gloomy. And maybe, just like always, we’ll get back on the boat before dark!

“Anyway, it wasn’t that fun, but I’m over it. It did feel good to scream so hardcore — like you never allowed us to do when I was little. Finally, I was actually in trouble.”

That’s the end of Naomi’s report. Jen-nie, her mom, filled in ‘the rest of the story’.

“I do love the way the girls fought the attackers off when they judged it was a good option. And it’s classic that Naomi was really into protecting her veggies! The backstory about the yelling is that I’ve always hated children screaming for the sake of screaming, so I forbade my kids to do it and always told them to ‘save it for when you’re really in trouble’. Good girl.

“It even gets better. Or worse. I’ve just been e-chatting with Naomi, and it seems that she hadn’t told me the entire story. She didn’t want to worry me, but she actually wrestled a knife off the guy!

‘He made a couple of stabs at me and missed, so I figured he wasn’t too good at this kind of thing, and grabbed it off him,’ Naomi told me. ‘I have a new steak knife now, but it’s a very small one.’

“I’m guessing the ‘small’ size of it is another attempt to stop my worrying. The hair is still standing up on the back of my neck after her telling about the attack, but I’m super proud of the way she handled it. I thought of it today when I read the report about 6’4” Bill Lilly getting robbed on the Lagoon 470 Moon-tide at Caleta de Campos. He said he felt that because he was big, he could handle the thieves. I’d like to assure people that size doesn’t matter. It’s attitude. Naomi isn’t even 5 feet tall, but I guess can kick shins with the best of them.”

Heroina — Frers 74 Tim and Kathy Rutter Spirit of Tradition Sailing (Texas)

Every winter there are a couple of boats that make a grand entrance onto the sailing scene in the Caribbean. One of this year’s boats was the gleaming Frers 74 Heroina. Her arrival was noteworthy because she’d been in the Hinckley Yard and Newport Shipyard in Rhode Island for 3½ months of the winter getting totally glossed out. Valentine’s Day is not the ideal time to leave New England for Bermuda and the Caribbean, but with the work done and owners having spent a pretty penny for it, it’s only natural they wanted to do some idyllic Caribbean sailing. So sail her to the Caribbean is what
German Frers wanted to draw a boat for himself. Not wanting to be influenced by anyone at his office, he only worked on the drawings at home.

There are certain advantages to being a big player in the world of big sailing boats. One is that you get to know owners of big boats, and owners of big boats always have containers of spare and discarded parts laying around. So when it came time to decide how long Frers wanted his boat to be, it was dictated to a certain degree by the fact that his old friend Raul Gardini — he of the Il Moro de Venezia America’s Cup campaigns — let him have an old mast from one of the Il Moros. The mast height pretty much set the boat length at 74 feet.

Frers also was able to pick up the wing keel from Stars ’n Stripes ’87 for little or nothing. Of course, what could be better for sailing on the shallow waters of the River Plate than a wing keel?

Alas, Frers was very busy working on America’s Cup boats in the early ’90s, so he didn’t have as much time as he wanted to draw his own boat. So, at least according to the legend, he gave what he’d done to his son Mani, home on break from college, and told him to finish it. Naturally, there were guidelines — flush deck, simple elegance, open interior — but Mani took it from there.

And while we’re certain that German carefully checked his son’s work, some refer to Heroina as Mani’s first design. Mani, by the way, is now a successful naval architect himself.

German had her strip-planked hull built at Astilleros Sarmiento in Buenos Aires. He sailed her a bit in Argentina, but in the 15 years he owned her, she was mostly kept in the Med.

After owning her for a number of years, German got tired of the owner’s cabin being aft, what with the kids and the boat’s skipper, South African Marius Swart, his Nova Scotian girlfriend Haley Allen, and a delivery crew did. As might be expected, on the way to Bermuda they got whacked with winds to 50 knots and seas to 25 feet. But Heroina handled it well, and after Bermuda it wasn’t a bad trip the rest of the way to St. Martin and St. Barth.

Heroina’s other grand entrance was at the Voiles de St. Barth, where she won all four races in her division, and usually by very comfortable margins.

She’s a happy boat, too. Much of the reason is that owners Tim and Kathy Rutter, and crew Marius and Haley, get along so well. During a break in the Voiles, Tim kept telling us how great it is to have a captain like Marius, and how wonderful Haley is.

Marius thinks just as highly of the Rutters. “He’s one of us,” Marius says, paying Tim what’s close to the ultimate crew compliment. “He wasn’t born rich, he earned his money.” Tim is as unpretentious as can be, and repeatedly encouraged us to stop by and have a look at the boat.

Heroina is a good gig for Marius, who came to the Caribbean six years ago. He’s only been the captain of one other boat, a Swan 60.

There is an unusual backstory to the design and building of Heroina, one that made her more attractive to the Rutters.

Almost every sailor knows that German Frers is a famous Argentinian yacht designer who has drawn many great designs for the likes of Wally and Swan, who has created custom builds like the 139-ft ketch Rebecca, and who has been involved in many America’s Cup campaigns. In the early 90s, Frers decided that he
their friends trampling over the boat at all hours. So he decided that the owner’s cabin would be moved all the way forward, where he wouldn't be bothered. He also decided to make some other changes to the interior. The work was begun with the classic boatyard tool, the chain saw.

“If you look way behind some of the paneling, you can still see a couple of places where there are clear traces of chain sawing,” laughs Marius. “It must have been pretty brutal. But they did a great job on the new stuff.”

Indeed, the interior as well as the exterior of the *Heroina* are in perfect condition. From her uncluttered flush decks to her open and uncluttered salon, she’s a beautiful yacht.

Tim tells us that he and his wife almost missed out on the opportunity to buy her. They’d been looking all around for a wood boat, but just weren’t finding what they were looking for at all. When they saw *Heroina*, however, it was as if they had found what they were looking for. The problem is that nobody likes to be rushed into an expensive boat purchase, but they were forced to make a decision.

“The situation is that owner Craig McCaw had 49 boats,” Tim told us, “and he really wanted to sell this one. So *Heroina* was about to be loaded onto a ship for delivery to the Med. If we didn’t buy her right away, she was off to Europe. We closed the deal in just 19 days.”

Marius and Haley — *she has a long sailing background — take a brief rest after a long regatta and before heading to Antigua.*

It was a little scary making such a big move so swiftly, but the Rutters are now delighted that they did it.

“*Heroina* is a great sailing boat,” says Marius. “She displaces 36 tons, so she’s not a light boat and doesn’t surf, but we went around the Voile course at a pretty steady 9 to 10 knots. And she’s like a rock going to weather.”

What’s with the unusual name? German’s great, great, great grandfather was a pirate. His first prize was a French warship named *Heroina.*

Their having arrived in the Caribbean so late in the season. It was almost time for her to head back to the Northeast again. “We have a very busy cruising and racing schedule, starting with James-town,” says Marius.

**Carina — Mason 33**

**Leslie Linkkila and Philip DiNuovo**

**Pohnpei Respite** (Kingston, WA)

As we’ve sailed more than 28,000 miles since leaving Washington in 2003, a lot of people think we must be wrapping up our circumnavigation. On the contrary, we haven’t even made it all the way across the Pacific yet. We like to stay in places and get to know them.

We’re currently in Pohnpei — one of the Caroline Islands that is part of Pohnpei State, which is one of the four states that make up the Federated States of Micronesia — and in order to get to know it, we’ll probably stay here until New Year’s 2014. After all, Pohnpei offers us many things we appreciate these days: a safe anchorage deep inside a lagoon that we believe is outside the typhoon zone, friendly locals, interesting cultures, USPS shipping, a U.S.-friendly visa policy and well-stocked stores. The largest ‘supermarket’ carries everything from crackers to coffins. Yes, coffins.

A six-and-a-half footer will set you back $1,395. Too tight? The seven-footer is just $55 more.

We were weary when we first arrived at Pohnpei, for in the prior seven months we’d done two transequatorial passages and explored the Solomon Islands. Although 4,000 miles in seven months isn’t much if you make a couple of long passages, we’d been making shorter ones and moved along at a snail’s pace. Throw in a life-threatening health crisis, a haulout, and a few major equipment failures, and it seemed like a good idea to rest and renew in Pohnpei while we could.

After arriving in December, we became entwined in the transient cruiser population, participating in events and helping at least one disabled vessel make a safe landfall. We also discovered a large, interesting, international and not-so-transient expat population. Plus we caught up with a few old friends and made many new ones. So with holidays and events, time just slipped by.

Then Leslie learned that the College of Micronesia was short of math/science instructors, so she began teaching in mid-January. Just this week she stepped in to sub for another faculty member who has gone on maternity leave. She is now teaching chemistry, too, which has quadrupled her student contact hours and gotten a few more dormant science synapses firing again. Her weekly pay to date barely feeds Jake, our cat, but she is really enjoying the interaction with the kids. The kids are junior college-aged Micronesians who have many challenges.
Pohnpei is an interesting place. Geologically speaking, it’s like the Society Islands and Wallis — the volcanic islands in the center of the lagoon are still high and lush, and the fringing reef has few motus. The lagoon itself is mostly deep right up to large areas of coral, except in and around the port of Kolonia, where the lagoon is silted in. Way inside, SW of Kolonia town, is the anchorage with depths in the 25-ft range, and with a bottom of thick, gooey, black, clay-mud.

Sokehs Island with Sokehs Mountain is to the west, the mountains of Pohnpei to the south, and the low hillside of Kolonia to the east. Hidden in the jungle on the top of Sokehs Mountain are a number of abandoned Japanese gun emplacements that sit in redoubts. A warren of tunnels, overgrown with vines, connect each fortification. The big guns face the encroaching jungle and are, of course, silent. But in fact, they were never fired in anger. World War II action passed Pohnpei by, and the Japanese military left after the surrender.

A mile or so to the north, past the commercial dock and the airport, we can see the surf crashing on the reef. We recently raised our anchor after over two months and, as would be our luck, our washdown pump failed as the worst of the goo cleared the surface. Unable to quickly fix the pump, we finally hauled in the chain, motored to our mooring, and pulled the chain back out of the locker.

Among them are that they speak English as their second language, they are painfully shy, and they enter college generally unprepared for the rigors of independent study and advanced subjects.

Meanwhile, Philip is keeping Carina in shape and walking up and down the island’s hills, hauling supplies (read food) and laundry, which has left him as fit as he’s been in years. We are also — in our spare time — sewing sails and canvas for hire as the need arises, and writing when we can. This week we hope to finalize a deal to buy an immaculate old Mazda Demio, which seems to be in such good shape that we’ll be able to recoup our investment by selling it when we leave in roughly nine months. It’s slightly scary to think about owning a car after going just shy of 10 years without one, but our Pohnpeian driver’s licenses — $6.50 each — are up to date, there is no insurance, and the registration is only about $10.

The Demio has been imported directly from Japan, so the driver station is to starboard despite the fact that traffic drives on the right hand side of the road — as in the United States. Philip has driven right-hand cars before and has had no trouble. But drivers here think they have a God-given right to dominate pedestrians. In fact, they will aim for you if you’re in their path — even if you are walking on a sidewalk. Given the natural friendliness, politeness and shyness of most Pohnpeians — when they are not behind the wheel — it’s an odd behavior. But it’s made it a little hard on Leslie.

Why get a car at all? Leslie has had little luck getting taxis at 7 a.m. for her 8 a.m. labs on the
We spent the remaining hours of the day using brushes to scrub each link in buckets of seawater. If you’ve ever put a filthy chain — and its marine fauna — in an anchor locker and left it to fester, you’ll know why we were anxious to avoid this.

Pohnpei is the capital of the FSM: the Federated States of Micronesia, the entity created by the Trust Territory of the Pacific to become independent. Palau and the Marshall Islands decided on autonomy while Yap, Chuuk (nee Truk), Pohnpei and Kosrae became the FSM.

Being the capital of the country, Pohnpei is a medley of cultures from all the states, mixed coarsely with diplomats, NGOs, a bunch of expats from different countries, and the big evangelical churches. But a melting pot it ain’t. Every group has its ‘burb and church. But it mostly works.

Every place like this has its bad boys, and the Chuukese are the ones who like to stir the pot. They reside on Sokehs Island to our west, which they acquired after the Sokehs Rebellion resulted in exile of those living there at the time. At Christmas they decided to extend the holidays, so all Chuukese took two weeks off and spent most of their time drinking sakau (kava) and alcohol, and pounding lau and the Marquesan drums made out of barrels.

Without Kumer’s local knowledge and skill — and his boat with 400-hp of power — the engineless sailing vessel Zepryl may well have wrecked on the reef at Sokehs’s Pass when the wind suddenly died. Kumer towed Zepryl though Pohnpei’s pass and into the bay, where yachtie dinghies took over and tugboated Zepryl into the tight little marina.

Every day here is a good one because we are healthy, happy and in a beautiful place. So if anyone is worried about us, worry no more.

Philip and Leslie cruise slowly and thoroughly. After 28,000 miles, they’re still haven’t made it all the way across the Pacific.
IN LATITUDES

the boat. The topper is that more than two months later the abandoned Swan was found doing just fine on her own 800 miles southeast of Bermuda, the main still tied nicely on the boom. We’re asking that you be the judge. Should the “experienced sailors” be charged for their unnecessary evacuation? And should there be an additional fee for their having made the rescue more difficult by having not bothered to register their EPIRB?

“Cruisers in the Sea of Cortez have been pretty casual about securing their dinghies overnight, usually just tying them to the stern of the mothership,” writes Jon Doornink of the Puerto Escondido-based Morgan Out-Island 37 Seadream. “Not only has locking one’s dinghy for the night not been necessary, if you locked your dinghy to the Puerto Escondido dinghy dock, for example, the locals thought you were impeding their progress. But on the night of April 1 — I know, I know, but this turned out not to be a joke — a dozen cruisers were not anchored at Caleta San Juanico anchorage. In the morning, one cruising boat near us was missing her brand new RIB and outboard. All that remained was a cut painter. Appeals to local fishermen and land-based Mexicans — backed by a big monetary reward and a promise of no questions being asked — yielded nothing. We have been cruising these wonderful waters for 15 years, and this is the first experience we’ve had of dinghy theft in Baja. Times — as well as the price of pollo — are changing in Mexico.”

offshore on starboard tack, often a little south of west, before they can flog back on port toward their ultimate goal. And rarely are they blessed with 60 hours of southerly winds at the end of the trip. Don’t get us wrong, sailors have had success with the Clipper Route, but it’s rarely as easy as Seaward had it.

And you thought you didn’t like lawyers before. In early February, a group of four Irish lawyers, all members of the Royal Irish YC, set off from Connecticut for Bermuda and Antigua on the new-to-them Swan 44 Wolfhound. Sailing from the Northeast to Bermuda in February is not recommended, as it’s often stormy along the way. The barristers set sail anyway. On the night of February 9, while 80 miles north of Bermuda, the four set off the EPIRB, indicating they were in distress. According to the Coast Guard, the wind was blowing 50 knots and the seas were 20 feet. Those certainly aren’t pleasant conditions, but that’s the kind of stuff to be expected on that passage at that time of year. Indeed, the sloop Heroïne had similar conditions a few days later in the same spot. Thanks to the bravery and hard work of the pilots of a C-130, and that of the crews of two merchant vessels that were diverted, the four lawyers were removed from the sailboat in appalling rescue conditions. As it turned out, there was nothing wrong with the men — other than their being frightened. By asking to be rescued, the men no doubt put themselves and their rescuers at much greater risk of injury or death than had they stayed with

Take care! Inflatable dinghies and outboard motors are not only expensive — $5,000 to $6,000 — in Mexico, there is a limited selection.
Changes

‘Dinghies For Sale, Like New’. From what I’ve been able to see, it looks as though there are a couple of inflatables in the trailer. Knowing that dinghies have been stolen from boats, I can’t help but wonder if some of them have somehow ended up in the trailer. If people who have had dinghies stolen have the serial number or other identification, I would have no problem scoping things out and reporting back.” Watts can be reached at johnny44_isat@hotmail.com.

Crossing bars to get into port is always dangerous when there is a big swell running; nonetheless mariners eager for shelter often risk it. Five people were plucked from the ocean near Ballina on the east coast of Australia last month after a sailboat got mixed up in breaking waves approaching the bar and soon ended up on the rocks. Some of those who needed to be rescued were from the sailboat, some were from an earlier rescue boat that had flipped in the steep six- to nine-foot waves. One of the victims was trapped in an air pocket beneath the boat for one hour. Miraculously, everyone survived. Miraculous because it was hard for the skipper of a jet boat. And miraculous because with almost everyone beginning to suffer from hypothermia, the skipper of the jet boat decided his only option was to drive the jet boat through the surf and onto Shelly Beach where ambulances were waiting. It was a gutsy desperation move that worked out well.

Things didn’t turn out so well when the skipper of the 33-ft German yacht Meri Tuuli tried to cross Portugal’s Figueira da Foz river bar late one afternoon last month when waves as high as 15 feet were breaking. A distress call was answered by members of the Policia Maritima in a RIB and on a jet ski. It wasn’t long before five of the sailors were thrown into the water, and the RIB was flipped, throwing four of the maritime police into the water. One of the sailors and one of the maritime police were killed, and two sailors were badly hurt. Don’t cross bars when big waves are breaking!

Did you read Naomi Crum’s Changes in this issue and think it was maybe a little irresponsible for her parents not to discourage her from going cruising on a boat as small as her Columbia 23
Medusa? Before you do, be aware that in 1981, when her parents Bob and Jennie were about the same age as Naomi, they cruised the same coast on La Delfina — an Alacrity 21! In fact, that’s when they met the ‘Uncle Dale’ mentioned in Naomi’s report.

“When my husband and I were sailing down there in 1981 on our tiny boat,” writes Jennie, “we met and played with a low-life sailor/surfer like us by the name of Dale Dagger. He was cruising on Zoo, his old Wharram cat. Flash forward to this year. When Naomi was heading down the Nicaraguan coast, I was home ‘cruising’ the coast ahead of her on Google Maps. My jaw dropped when I suddenly saw the notation: ‘Dale Daggers cool place to stay’. It couldn’t be a coincidence. I did a bit of email tracking to be sure, and it was ‘our’ Dale. He had stayed in Central America and become Nicaragua’s go-to surf icon. We put Naomi and Dale in touch with each other, and Naomi ended up anchored in his bay at El Gigante for several weeks. He was really great to her, and we’re stoked how small the world is when it comes to cruising friendships. By the way, Naomi is now at the end of her current cruise, as the trusty little Medusa doesn’t sail upwind very well. So she’s in the process of selling the boat to a couple of super keen wanna-be sailors in Tamarindo, Costa Rica. It’ll be interesting to see what she does next, but I have a pretty good feeling it’ll involve a sailboat.”

From 1975 to 1995, French sailor Philippe Poupon, backed by 20 years of sponsorship from Fleury Michon, was one of the greatest ocean racers in the world. He won the Figaro Singlehanded Race, the Route du Rhum, set a trans-Atlantic record, flipped in the Southern Ocean during a Vendee Globe, and was a threat in every race he entered. With his racing days over, he decided he wanted to devote his life to the ocean environment, particularly in the polar regions. So in 1999, he made a polar voyage with the 36-ft Fleur Australe, named after a quasi-mythical flower said to grow in the most remote polar regions. In 2005, Poupon married the ridiculously lovely, vivacious and adventurous French actress Geraldine Danon. In 2010, the two decided to make a voyage to both polar regions on a new Fleur Australe, 60-ft pilothouse ketch designed and built by the Poupons.
specifically for ice. They would be accompanied by three very young children. As if it were no big deal, the family sailed from France to the Caribbean and up the East Coast of the U.S. to Canada, did a Northwest Passage, came down through Alaska, along the West Coast, across the Pacific to New Caledonia and other South Pacific islands, then to Australia and New Zealand. For the next three months — this now being early 2012 — they, accompanied by two crew, sailed to Antarctica to collect scientific data and make a film about their adventure.

We saw them present the film before a hometown audience at the St. Barth Film Festival. Our respect for the duo — Geraldine even briefly went swimming in the ice-littered Antarctic Sea — is immense.

But talk about a gloomy place to cruise! If they weren’t dodging icebergs, plowing through ice fields, or building snowmen on the deck, it was at least overcast and foreboding. The wildlife, from hilarious penguins to a curious whale, was great. But for tropics-loving sailors such as ourselves, the film was almost as depressing as sitting through repeated viewings of Ingrid Bergman’s *The Seventh Seal*. It didn’t help, of course, that we don’t understand much French and couldn’t follow the dialogue. Lord knows there are people who love high-latitude and polar-region sailing, and God bless them. The good news for them is that they’ll never be bothered by crowds.

“Having quit work and taken off sailing, I’m now anchored at Bahia Santa Cruz / Huatulco, which is in southern Mexico,” reports surfing crazy German budget cruiser Stefan Ries of the Triton 29 *Mintaka*. “The sailing has been pretty good, as it’s been mostly downwind or reaching, and I’ve spent very little time drifting. My best 24-hour run was 100 miles, the worst was 40 miles. The best waves? Chacahuat!

Next week I’ll be departing Mexico, and the wind will decide if I stop in El Salvador or sail directly to Nicaragua.”

Jim and Kent Milski of Lake City, Colorado — with lots of time spent cruising in Mexico — are nearing completion of a four-year circumnavigation with the Schionning 49 cat *Sea Level*. Jim completed from a kit. Having stopped at Cartagena and passed through the Panama Canal, they don’t have much more than 1,000 miles to go to reach their outbound path.

“I’ve been very impressed with *New Caledonia*,” reports Kurt Roll of San Diego, who is crewing for another season for Dietmar Petutschnig and Suzanne DuBose on the couple’s Las Vegas-based Lagoon 440 catamaran *Carinthia*. From...
what I’d been told, I expected New Caledonia to be more expensive than Tahiti, which is about as expensive as it gets. But not only is it like paradise down here, the cost of things isn’t much more than back in the States. If anyone likes delicious French cheeses, bakery items, wines, fresh fruits and veggies, as well as fish and shrimp, they would love it here. As cruisers, the availability of this good food means the world to us. And the New Caledonians are wonderful. They’re even forgiving of my French, which is limited to what I learned watching Pepe Le Pew cartoons. I’ve made a video of our experiences so far, which can be seen at: www.youtube.com/watch?v=XBuadEuwSIA.”

Fun facts about New Caledonia. It was first seen by Westerners in 1774 during the second voyage of Captain James Cook. The northeast part of what would become Grand Terre reminded him of Scotland, hence the name. It was nearly 100 years before the area was visited again, and only for its sandalwood. When the sandalwood ran out, the new trade became blackbirding, a euphemism for enslaving people from the Pacific Northwest before heading to South America. His thinking is that staying close to the States might be smart until we get our sea legs and learn everything about our boat. So our question is when is the best time to sail from Southern California to the Pacific Northwest. We’d like to leave sometime this summer.”

If you’re headed north from Southern California, you’ll generally find better

This is how NASA sees the northwest end of Grand Terre, the biggest of the islands in New Caledonia. Looks promising, doesn’t it?
The couple attempted to set sail and to set an anchor, but with the wind and sea against them, the heavy teak vessel weather in late summer and early fall. But since you don’t seem to have any time constraints, we suggest that you harbor hop. If the weather stinks — and it may for a week or more at a time — just relax and explore wherever you are. And make sure the boat’s engine is in good shape, because we suspect you’ll be motoring most of the time.

"Today was another beautiful day in the paradise that is La Paz," writes Jane Roy of the Portland-based Hunter 54 Camelot, "except for the fact that a humpback whale beached itself on the sandbar in the La Paz Channel. But thanks to the help of many Mexicans and others, and the pulling power of a panga, the whale was towed back into deep water. Towels were used to keep the whale hydrated."

Also finding itself on a beach where it didn’t belong was the 48-ft Chinese junk Flying Dragon, owned by Frenchman Marini Réfi s and his Mexican wife Sibyl Gomez. They were reportedly motoring along the coast of Banderas Bay on the evening of April 1 when the engine failed. The couple attempted to set sail and to set an anchor, but with the wind and sea against them, the heavy teak vessel went ashore. Word of the vessel’s distress spread quickly, so there was a large turn-out of locals and cruisers to try to get the junk off at the 2 a.m. high tide. It was not successful. A later attempt — after as much gear as possible was offloaded, and after heavy equipment turned Dragon’s bow to the waves — was successful. The interesting vessel has quite a history. Built as a fishing boat in Hong Kong in 1925, she was converted to a cruising boat by an airline pilot, then shipped to Washington where she served as a floating pavilion for the 1974 World’s Fair in Spokane. She later served as a floating brothel — ! — in Astoria, Oregon. Under new ownership, in 2011 she was rescued seven miles off the entrance to the Columbia River after her engine died. Earlier this winter, her outboard was stolen near La Cruz. We wish the owners better luck in the future.

With the summer cruising season almost upon us, we’d love to hear from you, wherever you’re cruising. As always, short reports with high-res photos are best.

Indicate category. Remember Anything with a space for the best – and most exposure – of your classified ad...

Submit your ad safely online with Visa, MasterCard or AmEx at: www.latitude38.com

Ad will be posted online within two business days, appear in the next issue of the magazine, and remain online until the following issue is released.

WHAT’S IN A DEADLINE? Our Classified Deadline is now the 15th of the month, and as always, it’s still pretty much a brick wall if you want to get your ad into the magazine. But it’s not so important any more when it comes to getting exposure for your ad. With our new system, your ad gets posted to our website within a day or so of submission. Then it appears in the next issue of the magazine. So you’re much better off if you submit or renew your ad early in the month. That way your ad begins to work for you immediately. There’s no reason to wait for the last minute.

Great Value – $295,000!

52’ Passport 07- Freshwater

A rare find, this Passport Vista 515, “Gauidor,” is a sincere blue water cruiser with a freshwater history. Professionally maintained without the harsh effects of saltwater, this is truly one of the finest sailing yachts currently available. Designed by Robert Perry, her center cockpit layout offers comfort, safety and easy handling using the Selden mainsail roller furling mast. Generously handcrafted from teak, her spacious interior provides gracious onboard living featuring open main salon, master stateroom and forward guest suite.

$979,000

LAGOON 39

Way back in July Lagoon announced the outline of the new designs to come, the details of Club Lagoon, the owner association, and the marketing theme for 2014: "I Love My Lagoon." The all new Lagoon 39 made her American debut in Miami on Valentine’s Day!

If that kind of planning breeds that kind of coincidence, it will surprise nobody that the new 39 not only looks amazing, she’s a fantastic sailing boat. The rig plan is all new to Lagoon, and seems perfect for SF Bay: high aspect main and self-tacking jib for our breezy summers, and roller furling code 0 and roller furling genaker for long runs to the Delta and light winter winds. Watch our blogs for news as we learn more about this newest Lagoon.

SPECIAL NOTE: We are also the exclusive dealer for the new Neel Trimaran, winner of Cruising World magazine’s 2013 award for Most Innovative Boat of the Year. We think this boat will set a new standard for multihull cruising. See our website for more information and to arrange a personal tour of this exciting new boat.

The Multihull Company is pleased to announce the opening of the Northwest Multihull Center on Puget Sound’s Commencement Bay. The Northwest Multihull Center is a great starting place for buying or selling a catamaran or trimaran or to learn more about the world of multihulls. We are creating the West Coast’s largest concentration of catamarans and trimarans to serve you better!

The Multihull Company is the world’s largest international catamaran and trimaran brokerage. Our team of multihull experts offer several distinct differences including buyer and seller services, a powerful online presence, worldwide offices, displays at major national and international boat shows, newsletters and social marketing that inform and reach the right buyers and sellers. Visit us at www.MultihullCompany.com or at our new Northwest Multihull Center and see why The Multihull Company is truly the choice for sailors around the world.

Quality Yachts and Unique Opportunities

BURGER 72 PILOTHOUSE YACHT (1964)  Papagallo II’s luxurious “Onboard Nautical Events” attract intimate parties of two and celebrations of 40-60. Great SF Bay opportunity. $595,000

48’ ROYAL HUISMAN/KOOPMANS KETCH (1970) Lola just completed an 18-month total refit (electronics, rigging, sails, mechanicals, electrical and paint). Sails like a dream. Must see. $369,000

BALTIC 42 DP (1981) Why Not is Doug Peterson’s award-winning design for full comfort performance cruising. Motivated seller. Sausalito berth in very desirable location transfers with application approval. $75,000

530 W. Cutting Blvd., Pt. Richmond, CA 94804
The Bay Area’s Premier Boatyard and Brokerage – An Unbeatable Combination
34' GEMINI 105MC CATAMARAN, 2005
THE most successful cats ever designed. This one, the only one on the West Coast, was just detailed and shows very nicely inside and out. She’s ever been cruised and has less than 400 hours on her Westerbeke diesel. $129,000

43' SLOCUM CUTTER, 1984
Cruising cutter that has been well maintained and extensively updated — owners estimate they spend $10,000 yearly. $122,500

30' ALBIN BALLAD, 1978
Classic plastic in very nice shape inside and out. More than $30,000 has been spent on upgrades, including a new Yanmar diesel, new custom Bollenger spars, roller furler, sails and dodger. Hauled and painted in December 2012. Transferable Sausalito Yacht Harbor slip. $24,500

30' FORTUNE PILOTHOUSE CUTTER, 1978
This charming custom pilothouse feels WAY bigger than 30-f! She also has much new equipment (including a new Isuzu diesel installed in 1995), shows pride of ownership throughout, and is a must-see. $29,500

32' WESTSAIL CUTTER, 1976
Repowered, rewired, Awlgripped and flawless inside and out, this is the nicest Westsail we’ve seen in YEARS! She’s ready to cruise and lying in a potentially transferable Sausalito Yacht Harbor slip. $55,900

37' TAYANA, 1977
Nice example of a very popular model with exterior canvas and brightwork in good shape. The Perkins 4-108 diesel runs like a top, and the interior shows well. A must-see for anyone in the market for a well-found, well-priced bluewater classic. $49,900

30' TARTAN, 1977
Well priced S&S-designed classic with brand new Nissan 10hp outboard engine, just hauled and painted in late 2012, new cushions, winches, and lifelines, and much more. This boat’s in very nice shape inside and out. $15,950

36' CATALINA MKII, 1995
Note that this is the coveted MkII, which won a Cruising World Boat of the Year award for “Best Value, Midsize Cruiser”; the judges noted that the Catalina 36 is a happy blend of conservative, medium-displacement cruising logic and spry one design racing potential. Plus, it impressed them with the high level of execution at a very reasonable price. This particular example is well equipped, lightly used, and professionally maintained, and is in mint condition. She’s the only MkII we’re aware of currently for sale in CA and is a must-see for anyone in the market for such a vessel. $71,000

37' TAYANA, 1977
Nice example of a very popular model with exterior canvas and brightwork in good shape. The Perkins 4-108 diesel runs like a top, and the interior shows well. A must-see for anyone in the market for a well-found, well-priced bluewater classic. $49,900

32' ERICSON 35 Mk III, 1983
This coveted Mk III is in very nice shape (she’s had more than $30,000 spent on her since 2004, including new sails, standing and running rigging, electrical panel, keel bolts, etc.), attractively priced, and lying in a Sausalito Yacht Harbor slip. Quality, sound construction and style. $48,000

30' TARTAN, 1977
Well priced S&S-designed classic with brand new Nissan 10hp outboard engine, just hauled and painted in late 2012, new cushions, winches, and lifelines, and much more. This boat’s in very nice shape inside and out. $15,950

This charming custom pilothouse feels WAY bigger than 30-f! She also has much new equipment (including a new Isuzu diesel installed in 1995), shows pride of ownership throughout, and is a must-see. $29,500
47' SKOOKUM KETCH
Well respected bluewater world cruising design unusually stoutly built in fiberglass by the outstanding Skookum Yard of Pt. Townsend, WA. Center cockpit, hard dodger/pilothouse, aft master stateroom, radar and MORE! Great condition and ready to cruise. Asking $84,950

35' SPARKMAN & STEPHENS Center Cockpit Sloop. Diesel, aft stateroom, hard (fully enclosable) dodger, good sail inventory, wheel, extra strong fiberglass construction, well found quality cruising boat. Asking $28,950

34' FREERS CUSTOM Sloop by renowned German Freer. Beautiful, highest quality, cold-molded construction. Bilge, thru-hull sail fittings & lots of cruising gear. She's ready to go, fun to sail, & nice to look at. Asking $29,900

30' CAPE DORY Cutter. Albion design. One of the finest smaller bluewater cruisers ever built. Famous for comfort, reliability, seaworthiness & stout construction. Under, near-new dd, RF, radar, GPS, MORE! Asking $34,950
